S>Which means that 60% of hams don't use CW, correct? That means the
>majority of hams feel CW is old outdated and out classed by high speed
>datamodes that they can't access fully because the coders have helped
>keep it held back.

How many hams do ATV? Should we take all questions about ATV off the
exam simply because less than 50% use that mode? Does that mean that
ATV is outdated simply because less than 50% use it?

B>Some guys traded 1x2s for new 1x2 callsigns and now their old 1x2 will
>sit for 2 years? Seems like a waste.

Yeah, well that's what I said and then someone came back and wrote me
that it was also due to the fact when a license expires, there is a
2 year grace period. In this case, that does not apply but that was the
rational behind it. Now they should make the grace period one year and
put the callsign back in the pool. If a person lets his/her callsign
lapse, one year should be enough (if they're still interested in ham
radio and want to come back into the hobby.)

apartment though. In the end, learning the code is working smart, hard
and showing character. Work is noble and good, it makes you a better
person. The "something for nothing crowd" is spoiled. Ham radio is not
dying, rather it's the moral character of this country with it's liberal
acceptance of the welfare mentality. Thank goodness we have a
wonderful Republican Mayor in the City of New York and excellent
Governor in the States of New Jersey and New York who are
turning the tide on this disease.

>other radio service will require its operators to have knowledge
>of Morse.

So what, that does not make it obsolete as you paint it.

>They now serve as an arbitrary
>and illegitimate prior restraint on our access to our own common
>property, our birthright, the spectrum.

This is again the cry heard 'round the welfare offices... Ham radio is
a privilege, NOT A RIGHT! You have to work to EARN (as in spend time
learning) the right, it is not a birthright. Same with a driver's

license, you have to earn it.

Sorry folks, this concept is lost on most people today. g0d, the idea
of WORK, why, that's a FOUR LETTER WORD!

G>The divine right of kings idea that our common heritage belongs
>to the king, who may grant a boon, IE a privilege, to his favored
>subjects to use it from time to time, or not, arbitrarily at his
>whim, has been dead since the signing of the Magna Carta. Government

Rick,
RE: The origion of 73. It was started by Wayne S. Green, W2NSD,
and his first wife Virginia Londner-Green on March 13, 1959. Location
was the secxond floor of a 2-story walk-up located at 1428 East 8
Street in Brooklyn NY. I was there when the first issue went to press.
Wait a minute -- you want to know about the number 73 in ham radio.
It has absolutely no signifigance. It was a term out of a sequential
numbering of messages for transmission brevity. Goddbye and good-luck
haphazardly landed at #73.

As I explained earlier, this is irrelevant. (Although probably true).
The fact is that in matters such as this, the government most only prove
that it has a rational basis for requiring CW, in a hypothetical lawsuit
that someone might bring. In all the gazillions of lawsuits filed, the
federal government has never lost a rational basis lawsuit, and only one
state government has lost one. This is because the rational basis test
is EXTREMELY deferential to the government.

You can see why. The courts do not want to be in the business of
second-guessing the executive and legislative branches, except in true
matters of Constitutionality. Put another way, the courts are not the
appropriate means for challenging the WISDOM of government actions, only
their Constitutionality. And the Constitution is, of course, silent on
this minor question.

I took my general and advanced tests back before VE testing, when you had to go down to the FCC office, and before the questions were drawn from the pre-published block. Frankly, the exams weren't any more difficult than they are now. If you studied and memorized the ARRL license manual, you were highly likely to pass the tests.

Promise??? Not very friendly are you Roger?? Obvious to me that you are another nonbeliever in the AMATEUR CODE of CONDUCT. Oh well. I am sure you, Carl and Len will be very happy in your new lives.

I will go on, saddened by the thought that we shall never communicate again. I take it then, I shouldn't ask for free legal advice??? Too bad.

OK Roger, it's been fun. Hopefully you'll at least keeping insulting retirees with your condescending manners, they do provide great laughs. Let me know when you get your first case, loved to be there. I promise I won't keep track of the errors in your lawyer logic

So long, Roger. Good luck, farewell, goodbye.

I sign, as always, you friend from the coast where the sun ALWAYS RISES

Let's construct a test.

Group A is given a "study guide" showing concepts and information.

Group B is given a copy of the examination with all the correct
answers noted.

Give each group 1 hour to study the material. Then, given them the
same test (the one given to Group B).

I wonder which group will have better test scores, hmmmm?

Nah, Spew doesn't copy code. He doesn't even own a radio (amateur, at least.) That's why he is an Expert on amateur radio affairs. He graduated from the Lennie & Squiqqie Amateur Radio School For The Highly Gifted.

Bwahahaha. What a moron.

Talk about 'beepers' being too lazy to "go look up your AOL profile",
it looks like you're just as lazy to go look up PACBELL.COM's Internic
registration information:

$ whois -h rs.internic.net pacbell.com

PACIFIC BELL (PACBELL-DOM)
2600 Camino Ramon, Room 4E502
San Ramon, CA 94583
US

You >have< heard of Pacific Bell, haven't you? I know that those who
whine endlessly on here about CW advocates being "anti-technology" are
they themselves some of the laziest individuals alive. After all,
who can't spend 10 seconds typing in less than 40 characters?

Ooops. I guess Spew would fail that "keyboard skills" test that some
codeless-HF types want to replace the CW exam with....

It uses a system of little sound-a-like phrases to help associate the sound bite to the letter. Those who have a talent for CW decry this system but it is a very powerful tool for those who just can't hear the difference. I am dyslexic and this system was the only way I was able to pass the code hazing.

Ron, I'm not strictly CW by any means. But I understand your motives.

I was W6TUH for a number of years, having had to give up W7UOX when I moved to Calif in 1960. I really disliked the 6 call on CW. So I used Gate 1 to get W7UOX and then used Gate 2 to mutate it into W7OX. CW "swing" is really significant to some of us.

Cross-posted to:
aus.radio.amsat,aus.radio.packet,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

For Your Information. Important to note, especially if your incoming
buro has a subscription fee

SO YOU HAVE A NEW CALL SIGN

The QSL Bureau has been innundated by letters from subscribers
informing us of a change in call sign as a result of the Vanity Call Sign
activity by the FCC. Simply sending us a note with a new call is not
enough. You must re-subscribe under your new call. Here is the
recommended procedure:

If you already have postage credits on file under your old call, we
suggest you leave these credits alone for at least one year. You should
subscribe to the QSL Bureau under your new call just as if you were a new
subscriber. If you presently have a large number of postage credits on
file under your old call, you may send us a written request to transfer
(n) credits to your new call. Leave a sufficient number of credits in
the old account for us to forward in-coming cards for the next year or
so. When you think you have received all outstanding QSLs for the old
call, then send us a request in writing to transfer all remaining postage
credits from your old call to your new call.

While it may sound confusing, this is the only way we can keep track of
our subscribers. Everything here at the QSL Bureau is filed under
callsign. Please print your call (old or new) on any correspondence you
send to the Bureau. If you want us to respond, send us an e-mail address
or a self addressed and stamped envelope.

If you have any questions, please e-mail to k2aio@njdxa.org.

73,
Ron, K2AIO
W2 Bureau Manager

Hate to follow up so quickely but I forgot that Cushcraft makes a very
large (tall) high gain antenna for 2 meters. That would be a good
antenna for the hitch mount perhaps.

The good ol mirror mount for say a 1/2 wave design, and also a hitch mount. They bolt on where the ball would be bolted and give enough clearance to still use the ball. The latter of the two would *probably* be better for say 5/8 wave designs on 2M. Of course you are always blocking some of your signal with the vehicle body.

I have used glass mounts and found that the rated power of 50W was not very healthy for the antenna. But a glass mount is better than a duck, and they do remove fairly good.

Also a tip from KB9JTT, use a hair dryer to get the glue sticky if mounting a glass mount. Try to avoid mounting in the winter in say Wisconsin.

>important perspective on what the ARRL has done for amateur radio the last
>80 years. Simply put, without the ARRL fighting on behalf of ham radio all
>these decades, our hobby/service wouldn't exist today as we know it.

In many cases the ARRL was an important voice in defending and advancing amateur radio up through the 50s, though it had its reactionary moments immediately before and after WWII too. What has been disappointing is what the ARRL has done following the publication of _Fifty Years of ARRL_. In particular the debacle of 1968 and other cases where the ARRL and A. Prose Walker attempted to roll back the clock and stifle amateur radio growth and innovation with additional layers of red tape and restrictions. And today the ARRL is a force of reaction which has opposed practically every attempt to modernize the service.

A living organization cannot rest on past laurels indefinitely. The operative question is "What has the ARRL done to advance amateur radio lately?" Aside from an abortive attempt to push ACSSB a while back, the ARRL has been in the forefront of opposition to introducing new modes and methods. It continues to fight rearguard actions rather than taking a proactive leadership role in advancing the service. By and large it has an unhealthy bunker mentality, though I must say that grabbing a share of 219 MHz from the Waterways service was an uncharacteristic proactive action which should be applauded.

>proximity to Texas Instruments that's going on here or something?

No, it is just that TAPR (and AMSAT) are organizations which are
true to the fundamental purposes of the amateur radio radio service
as a service for self-training in (modern) radio technology and the
conduct of experimentation and technical investigations approaching
the SOTA. They are willing to take a leadership role in those areas.

>Perhaps the 'democracy' aspect of ARRL means it will never really be the
>leader in these things. So, old patterns of operating get a constituency

>private repeaters that are used maybe 1hr per month until I'm old and
>dead -- however silly this is technologically. On the other hand,
>there's no constituency for a mode that doesn't exist yet.

The ARRL is a magazine and book publisher which runs contests and acts
as a service bureau to Dxers. It is an organization which panders to
an inbred constituency of traditional radio *users*. It doesn't exert
leadership in advancing amateur radio. Rather, it prides itself in
being the reactionary defender of the status quo.

>Btw, what do you guys think of the latest handbooks. Didn't older
>versions have index marks on the end of the paper so you could find
>stuff? Maybe I'm confused. Personally, I think it'd be a better read to
>have the projects at the beginning of the chapter, and then explain all

>big power 2M amplifiers and stuff. Even though I'd be way scared of
>cooking myself with such a beast.

I agree that the organization of the current Handbook leaves much to
be desired. The index and page numbering system are an abomination for
someone attempting to use it as a reference. I don't know why they
stopped numbering the pages consecutively or why they stopped having
a comprehensive index in the front. It makes looking for a particular
bit of information a random search and destroy mission. If they wanted
to change the system, they should have taken as their example the
permuted index form of AT&T Unix manuals.

I don't mind the way the individual chapters are done. Explaining
the theory and then showing real world project examples is a good

tutorial organization. Though I did like the old method of grouping
HF projects together and VHF projects together and mobile projects
together. There was a logic to that which was appealing. But what
I really hate is the new indexing and numbering system which makes
it difficult to find what you need quickly.

>I'll probably end up joining the ARRL eventually, as I'm getting back
>into ham radio stuff. I think my first check is going to Amsat, mainly
>cuz' they seem to be pretty goal oriented, and short of cash lately.

AMSAT and TAPR both deserve your support. Despite its many shortcomings,
the ARRL probably does too. It won't change unless we push it to change.
And we can do that more effectively from the inside than the outside.

The one I like (?) best is hearing some Newbie no-coder referring to ham radio as "the Two Meter!" (as "I'll catch you on the two meter"). Of course there is reference to "the other band". Then there are some gems such as "the first personal" and my all-time favorite "destinated". Of course this discussion would not be complete without reference to signal strength measured in "pounds" and its oblique reference "poundage".

All this notwithstanding, I'd rather share the bands with these people than lose them entirely to commercial two-way service providers who have been eyeing them for decades!

Happy New Year, Gang!

Source record: 208158

I have been a member of the ARRL, and will probably sign up again, but NOT because it is "OUR ONLY VOICE" -- since I find the ARRL and I do not agree on a number of issues. One point to remember is that the ARRL is made up of people, most of whom went through the licensing process prior to the No-Code Tech. Thus the ARRL is inherantly biased toward CW, and does NOT suit the needs of many of the new No-coders (like my wife and three of my 5 children are). These people do not join ARRL BECAUSE it does not reflect their opinions on a lot of issues.

Since No-code Techs are a reality, it might be nice if "our" organization would at least offer some measure of support for "them". It must, if it ever hopes to refelct the views of the entire Ham community.

Hope you have a blessed New Year!

>the pro-coders) won't get you anywhere. If you want to accomplish
>something go speak with foreign representatives in the ITU or send a
>few more letters to the FCC.

Actually, there is no ITU 5 WPM requirement. One character per
fortnight would satisfy S25.5, and there is nothing in the treaty
which would forbid an applicant to use a translation chart (as
aircraft pilots do). However, S25.5 requires that an applicant
demonstrate that he can "send by hand" and "receive by ear" texts
in the International Code. Current US testing already disregards
half of the ITU requirement, and offers an accomodation for the
deaf for the second half. And there is a legal out in any event
(one the Japanese have taken) which allows any country to take
a footnoted exception to the requirement if it suits their national
interest to do so. This means that the Japanese are compliant with
ITU requirements when they license HF operators without a Code test,
but that the US is not in compliance with the ITU requirement even
though it retains three half-assed tests.

The FCC has made it plain on two occasions when denying petitions
to change amateur Morse testing requirements that it maintains
the current testing system solely because the current amateur
community insists upon it. (Meaning in practice that the ARRL
insists upon it.) So your final suggestion has merit. It will
be necessary for those wanting to change the system to apply
pressure to the working groups forulating national negotiating
positions for WRC-99 (those working groups must have preliminary
positions ready by next July to circulate to other administrations
as required by ITU procedures), and to the FCC so as to disabuse
them of the notion that the ARRL speaks with one voice on this topic.

>
>EXISTING AMATEUR RADIO OPERATORS DO NOT CAUSE THIS RULE TO PERSIST. OUR
>GOVERNMENT, AND THE INT'L RADIO COMMUNITY, DOES.

Actually, Roger, the Commission has publicly stated on two recent
occasions that the reason Morse testing persists in the form it
does today is "because the amateur community wants it that way."
So existing radio amateurs do have a responsibility for the way
the licensing system is today. Of course there is also S25.5, and
the FCC isn't going to lightly take a footnoted exception to that
(as the Japanese have done), but S25 in its entirety is on the
table for modification at WRC-99. And the opinion of the existing
amateur community will have a strong impact on shaping the US
negotiating position on that. So again, current amateurs bear a
responsibility for the existing system, and for the shape of the
system which will exist post-99. (If a Morse receiving speed
requirement for amateur radio persists past 1999, it will be
the sole remaining radio service to have such a requirement.
Frankly, that will make amateur radio look like an anachronism,
and that doesn't bode well for retaining our spectrum.)

>>I have been a member of the ARRL, and will probably sign up again, but NOT
because it is "OUR ONLY VOICE" -- since I find the ARRL and I do not agree on a number of issues.<<

Then why support them? Money talks. Please, withhold your financial support and let them know WHY you're not signing up for membership.

Again, money talks. The ARRL's recent decision to continue supporting the wishes of the beepers proves this. Their core membership is comprised of older, head-in-the-sand types who continue to shout "give me CW or give me death!"

The only way to change this is to vote with your wallets and deny funding to an organization which does not support your beliefs. If enough of us do this, the ARRL's eventual funding squeeze will force them to accomodate our wishes since their core membership is literally dying off.

>They are not the traditional ham with a deep rooted interest in ham
>radio. Rather, they are communicators who want to communicate
>reliabally -- at minimum cost -- with family and a few close friends.

I'd suggest you are painting with much too broad a brush here. There certainly is a subset of Techs who fit your characterization, but there was a subset of the old Techs who fit it as well (often wives of hams who were bullied into getting licensed). The subset may be slightly larger among new Techs than among old Techs, but I think you are wrong to characterize that subset as being "most". Certainly "most" of those trying to use amateur radio as a cheap cellphone substitute are bound to be disappointed. It is usually neither cheaper nor satisfactory for that role. (Nobody has to buy a cellphone with the providers giving them away as promotional items, and $14.95 a month takes a long time to mount up to the cost of an amateur HT. Plus you can *receive* calls from anyone with a cellphone, but in practice you can't really do that with amateur radio.) So if they don't find some other facet of the service appealing, they are likely to rather quickly drop out.

>They are not joiners. They do not join the ARRL or any other national
>political activist ham radio group. They do not join local clubs.
>They do not financially support repeaters. To them, ham radio is
>nothing more than an inexpensive alternative to a cell-fone; and as
>such they have no abiding comitment to the service.

That doesn't match with my experience. While Techs may not be joining the ARRL in large numbers, large numbers of them have become active in local clubs. In some local clubs, Techs now form the majority of officers. They have often brought a vitality, vigor, and enthusiasm back into what had too often become old men's social clubs. We're finding large numbers of Techs participating in ARES and other public service communications. And we have been fortunate locally to have some Techs become leaders in our technical groups (the immediate past president of GRAPES was a Tech, and contributed significantly to the success of our network, and our current frequency coordinator is a Tech).

>I used to think that if a carismatic leader came along to organize the

>priveleges without having to take any test. (What was it that Wayne
>Green used to say that you could stand on a street corner handing out
>free Extra class licenses and free rigs -- and get no takers???)

I tend to agree with this. Many (not all) of the Techs I know express
a disdain for HF and typical HF operating. Many appear to be apathetic
about organizing as an effective political force because they don't
see changing HF licensing as important or relevant to them. They often
have the impression that HF operating is glorifed CB, a place of inane
contacts and "skip shooting". I've tried to interest several in HF digital,
but most merely yawn and say "too slow, too restrictive, too unreliable".
It has been hard to make them understand that there really are advantages
to being able to establish long distance single hop point to point links.

>I think we are dealing with a different mindset than ever before in ham
>radio and in creating the codefree Tech, we have really created a
>separate "communicator" radio service where current hams who own
>repeaters are "service providers" providing a public utility at no cost
>to the public.

Well, I think that's too broad. There are *some* among the new Techs
who take that view, but I don't think that they approach a majority.
At least the ones I know don't fit that stereotype. As a repeater
owner, I get a lot of first hand experience meeting newly licensed
amateurs. I'm often their first contact. And I just don't find that
the stereotypes moaned about on these newsgroups are that common.

For the most part, I find the new licensees a bit timid, a bit
confused, but incredibly eager to learn. I wind up spending a
lot of time helping them get up to speed, but it is worthwhile.
A number of them are now close friends, and a number of them
have knowledge in related fields which has resulted in a reversal
of roles, with them being the teacher and me being the student.

I've always believed that ignorance can be cured, but that stupidity
goes all the way to the bone. I've met some stupid hams, but at
least as many among older Morse tested licensees as among the newer
licensees. A bit of ignorance is actually a good thing, because without
it there would be nothing left to learn, and life would be too boring
to endure. That's what's so great about amateur radio. There's always
something new to learn, something new to try. It is never boring
(unless you close your mind to new ideas and plod along the same tired
old ruts, and that *is* the pinnacle of stupidity).

For whom? Not for the 40% who use it, they have the more relevant real world test that they pass every day of actually using it. Nor for the 60% who don't use it, since it is a moot point to them. There is very little cross-mode interaction.

insists upon it.) <<

This is where the FCC makes a big mistake, IMO. In the old days, the ARRL could be considered as the voice of ham radio since it's policies were agreed upon by a large majority of amateurs. But that is no longer the case. Consider the fact that the largest class of operators is now comprised of no-code Techs...the very group that the ARRL vehemently opposed the very creation of back when the no-code proposals were first being floated back in the late 80s.

>snails pace.

Hello? What are you talking about? In the first place, what gave you the idea that we are limited to 9600 baud? That's news to those of us running 56 kb (and probably news to those running 1.2 Mb). Of course on *HF* we are limited to 300 baud, but that's really too fast to be useful on HF due to multipath (and is one of several reasons that HF packet, as we currently do it, sucks). We really would prefer to run a basic baud of 50 or less to get around symbol smearing due to selective fading.

That has nothing to do with ECC. Voyager operates at 40 baud, and has very robust ECC. The only thing speed buys you is a higher basic error rate, and that forces whatever ECC you use to work *harder*. In fact, if you increase baud too far for the conditions, you can't carry enough ECC to correct the errors. This is the baud limit for the channel.

Now a low baud doesn't necessarily mean a low bps. Some of our HF methods use symbol overloading so that one baud represents more than one bit, and some of our HF modulations use multiple low rate carriers so that several symbols are transmitted in parallel. Thus we can get 750 bps from carriers running a basic baud of 16.5 in the case of Clover. This makes the job of ECC much easier, so we don't have to carry as much ECC overhead as we otherwise would if we used a higher basic baud.

I gave up AI3O (2x1) for W7LDS for two reasons.

#1 - After being around for nearly twenty years, I still would get people questioning the legitimacy of an Alpha prefix; but mostly hams would come back to A one-thirty or other derivatives! I had call plates in Maryland, and you couldn't tell they were for Ham Radio.

#2 - I'm originally from Phoenix Arizona and have great pride in being from the West, just as southerners take pride in being from Dixie. I picked up the three call while working in Maryland, but kept it when I moved back to Arizona because all the 2X1s were gone by then and I didn't want to be AX7XY or some such thing. Since I couldn't get my original WA7EGZ back, I just kept the three call. Now at least I don't have to explain to everyone what part of Pennsylvania I hail from :)

#3 (I know I said two) I was blessed to pick the initials of my religious affiliation, of which I am most proud.

Probably more than you wanted to know!

>"get through" poor channel conditions when most other modes available to the
>ham, even the advanced digital modes, fail.

I'd suggest you get more experience with advanced digital modes. Clover
and PACTOR II can operate under conditions where a signal cannot reliably
be detected by ear. And there are a number of other coherent techniques
which can make the same claim. NASA's Voyager and Pioneer craft communicate
from beyond the edge of the solar system using very low power and small
antennas. They don't use Morse, you can't detect their signals by ear. But
what they do use, built using primitive 1960s technology, can be duplicated
or bettered by the amateur today for a pittance and a few chips.

>Why do so many EME operators use
>slow speed CW? Because you can reduce channel bandwidth and use coherent
>signal processing to pull the CW keying out from under the noise level. It is
>not fast, it is not sexy, but it does accomplish the purpose of communicating
>information over long distances under extremely poor conditions. Try it with
>SSB!

Better try it with wide shift multiplex FSK (the Navy thought that worked
well in the 1950s) and a strong convolutional coding. If you read the
Moonnet mailing list, you'll find out why most EME operators choose
OOK Morse. That's because they claim it isn't a *real* contact unless
you do it by hand and ear. The fact is that you can do it with much
less power if you use the power of coding instead of huge amps and
antennas. But the EMEers won't count it, it isn't a *real* contact
because a machine did it. The really weak signal work being done by
amateurs isn't being done by amateur radio licensees. It is being done
by Lowfers with ERPs in the few microwatt range working 1000 mile
groundwave paths reliably day and night. That equates to signal levels
far weaker than any EMEer can detect by ear.

>And I am reminded of the VietNam war POW's
>who communicated with each other through cell walls by tapping our Morse code.

Actually, most used the Prisoner's Code. You have no way to differentiate
the duration of a tap representing a dot from a tap representing a dash.
A tap conveys no element timing information. The Prisoner's Code uses all
equal length elements, so tapping does convey the necessary information.
It is also so simple to learn that you can convey it to someone who doesn't
know it in a matter of seconds. That is important in POW camps since most
soldiers *don't* know Morse Code, and their face to face contact with
other prisoners may be very limited, so being able to convey the essentials

of the Prisoner's Code rapidly is important.

Old time telegraphers could read "taps" because their sounders made *two* taps for each element, one make and one break, IE click-clack. The time between the two sounds was the element duration. That's not really practical with hand tapping. If you're just communicating through a thin partition, you can *scratch* out Morse, IE skrii-skriiiiih, but you might as well whisper at that range. It won't work if you are using the plumbing system or the bars for longer range. You need the sharp tap to carry the sound far enough.

The Prisoner's Code pre-dates Morse, and is a degenerate form of the Vermeer Cipher. (And you can use it that way too so the guards can't eavesdrop on what you're sending.)

Let me get my white sheet on here..... Okay, that's better.

There are, in a sense, two "practical" tests that you have to pass to get on
HF. The first is a speaking/listening examination, where you are
effectively graded by whether or not you can listen to the VE who is
giving you instructions on taking your test. The second is the CW
examination. Granted, one is a formal exam and the other an informal,
but if you are unable to listen and comprehend basic English you will
have a difficult time on HF in the States (from a SSB perspective).

I don't feel it's a necessary test of my skill either but the fact is
right now we HAVE to learn code for HF access and that's that. I'm stuck at 8
WPM at the moment but I'll plug away and eventually get through the barrier.

The ARRL is governed by a Board of Directors who are elected by the ARRL members in their Division. For a group to control "their" organization, all "they" have to do is elect "their" Directors. By the end of the century (only three years away), Technician licensees are forecast to outnumber all other license classes combined. The only thing that could keep them from taking control of the ARRL is if they are too apathetic to join and elect their own Directors.

Heh heh heh. I heard this one over the CB a few weeks back.... A guy was explaining how he was a technician and built amps, antennas and CB radios. Another asked what SWR was and should he be worried about it. The CB tech replied.... no you don't need to worry about it, it just stands for short wave radio.

Anyone out there have a very cheap tnc for sale.
We are trying to setup a small packet station here to get the
local kids interested in ham radio. Not having much luck as of
yet though. So far all we have been able to scrape up is an
antenna,feedline, and 2 dumb terminals. We also need a 2 mtr rig
and power supply. If anyone has any of this at a reasonable price
please let me know. Leave a follow up here or e-mail to the address
below.....

Maybe I'm not that great when it comes to electronics, but are you know
stating, for the record, that the reason that there are such things as
propagation on the HF bands is to keep CW ALIVE??? I didn't know that
Mr. SUNSHINE was a CW enthusiast. Tell me, what type of physics apply in
MS?? Obviously nothing found anywhere else in the universe.

> >You advocate major increases in dataspeed. Carl advocates increases in

> >changed to allow commercial access on the amateur bands

> As stated before I do not advocate commercial access to amateur bands.
> An HF or VHF gateway to the internet does not require commercial
> access to amateur bands. Try reading CQ VHF and you'd know this.

Tell you what, you play internet on amateur hf. Be sure that your modem
can handle the blazing speeds that you'll be limited to. Tell you what,
you download, say, a copy of Netscape on your theoretical HF internet
connection (amateur bands, mind you). Let me know when it's finished or
your 60th birthday, whichever comes first.

And CQ VHF??? funny, why do you need HF privs for VHF access?? Don't
you have that with a nocode license already. Are you going to provide
the FREE access to the internet for everyone to use?? Read back a few
months, we've already been through this.

> >Actually if you read Len's posting, as others, you find that the ARS is

Devoted??? Naaaa. Just a hobby I enjoy. And again, talk to Lennie.
He'll tell you what you type is wrong. He's old. He may not be a ham,
but he's old and has been in the military. 2 out of 3

> At one
> time the ARS was the forerunner and was tapped by the military as a
> source of advanced technology.

Back in the 20's and 30's perhaps, but as stated by others, the ARS
shouldn't look into the past..retirees, etc.

> Today we are looked upon as a group of idiots that play.

Don't include me in your group Skippy. I don;t think there are very many
others who want to be in your group of idiots.

> However there
> are still a few amonst us who tinker and experiment. Once again, see
> this months issue of CQ VHF.

sorry again, VHF is for sissies There are many many who tinker on HF, so
what's your point Zippy?? BTW, you using all homebrew VHF+ equipment or
does tinkering only qualify as adjusting your VSWR's and plugging in yur
storebought radios

> >BTW, why is it that you need HF access when you continually type that HF
> >is for sissies??

> Because I want it and have just as much right to access it as you and
> the sissies do.

There you have it..the national anthem of the nocode agenda. Actually
you have NO right to it. Access to IT is a priviledge that is aquired by
passing various government, both Federal and International, requirements.
Since you have not done that, you have NO right to anything other than to
play on the VHF+ bands. Grow up. you sound like a 5 year old who can't
have his way. I WANT IT!! GIVE IT TO ME!!!

I on the other hand, have accepted that there were certain requirements
needed to get where I wanted to be. I worked towards them. I have
access because the priviledge was granted to me.

But again, what would you need HF access for?? You aren't going to work
DX, you said so yourself, there's no challenge to DX on HF.

I am using a Larsen 2/440 glass mount on our JGC. It is mounted near
the back of the right rear window. Works great with my Kenwood
TM-732A dual-band. Just make sure you mount it below the metallic
stripe in the glass.

95. TH28A Mods, again...

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-01 00:00:00 UTC
From: Joel Riedesel <jriedese@counselware.com>
Message-ID: <32CB0651.694E@counselware.com>
Source record: 208203

Sorry for the rehash on this TH28A modification, but I seem to
find conflicting/different information on how to do this modification.

The main reference I find on the net for modifying the TH28A is
to remove D8 and D10 and use one of them for D14 (for the
American version).

I've also seen notes in rec.radio.ameteur (via DejaNews) saying
to cut either D12 or D16.

Ok. I'm confused. First, I don't know which one D16 is.
Second, why don't these different suggestions mesh?
Perhaps there is different manufacturing going on in later
versions of the TH28A which suggest different ways to
modify this unit? Any thoughts.

My serial number is 40703211.
Internally, on the circuit board with all these diodes, I have the
numbers X53-3400-00 and X53-3410-00.
I do not have diodes D14 or D15 (I have the American version).

Can anyone confirm a procedure that really does work and
can give me a reasonable level of confidence that I won't
break something by following one of these procedures?

Thanks!

Actually, success does not indicate how hard you tried, it may be easier
for some than for others, and some may never get it, regarless of how
hard they try. And don't anyone try to tell me that it is related to IQ.
That is bull, too. Some tasks can be linked to IQ, but memorizing
something is not. Learning Code is nothing more than memorization.

> O.K. anyone think they have the origin of the 73 in ham radio? Have >heard several explanations, including an early sending of the 'lucky' >digit 7 .. and then later, the 7 and the seven backwards (3) at the >end of transmission.....Rick AC6QQ

The following is from Louise Ramsey Moreau, W3WRE:

"The traditional expression "73" goes right back to the beginning of the landline telegraph days. It is found in some of the earliest editions of the numerical codes, each with a different definition, but each with the same idea in mind - it indicated that the end, or signature, was coming up. But there are no data to prove that any of these were used.

"The first authentic use of 73 is in the publication The National Telegraphic Review and Operators' Guide, first published in April 1857. At that time, 73 meant "My love to you"! Succeeding issues of this publication continued to use this definition of the term. Curiously enough, some of the other numerals used then had the same definition as they have now, but within a short time, the use of 73 began to change.

"In the National Telegraph Convention, the numeral was changed from the Valentine-type sentiment to a vague sign of fraternalism. Here, 73 was a greeting, a friendly "word" between operators and it was so used on all wires.

"In 1859, the Western Union Company set up the standard "92 Code." A list of numerals from one to 92 was compiled to indicate a series of prepared phrases for use by the operators on the wires. Here, in the 92 Code, 73 changes from a fraternal sign to a very flowery "accept my compliments," which was in keeping with the florid language of that era.

"Over the years from 1859 to 1900, the many manuals of telegraphy show variations of this meaning. Dodge's The Telegraph Instructor shows it merely as "compliments." The Twentieth Century Manual of Railways and Commercial Telegraphy defines it two ways, one listing as "my compliments to you"; but in the glossary of abbreviations it is merely "compliments." Theodore A. Edison's Telegraphy Self-Taught shows a return of "accept my compliments." By 1908, however, a later edition of the Dodge Manual gives us today's definition of "best regards" with a backward look at the older meaning in another part of the work where it also lists it as "compliments."

"Best regards" has remained ever since as the "put-it-down-in-black-and-white" meaning of 73 but it has acquired

overtones of much warmer meaning. Today, amateurs use it more in the manner that James Reid had intended that it be used - a "friendly word between operators."

I hope that this helps you in some way....

You know Bill, I could take it or leave it myself. I'd much rather see a
comprehensive test, like explaining how 'radio' works, and at least be
able to put together a block diagram radio. Have a clue as to how to
tune an antenna, understand basic propagation. Memorizing a question
pool isn't quite comprehensive enough.

How do you figure that 1x3's came before 2x2's since they are
different classes of calls?

Personally, I think that there should have been a gate 5 and that no
club calls (short of a deceased family member allowing a club to use a
deceased hams call) should have been issued prior to this gate.

Just my opinion. 73 and Happy New Year.

Message-ID: <32caa990.3225031@news.guam.net>
Source record: 208255

The military has been using the stuff for years. If you own a Kenwood HF radio and lift the lid, place about 1 quart into the radio cabinet and you'll be able to transmit and recieve the Sub-Space net. It seems the freq. grease allows the transciever to use those extreme frequencies. If you apply a coat on the antenna too, you'll be to talk to other galaxies. If you apply it to your computer, you'll be able to crack the crypto code from all the nations in the world... How do you think the NSA does it?

>O. IC. Said the blind man. And then he took out his hammer and saw.
>And after you get hammered, you come around with this as an excuse.

Sorry, Jimmy...seems you're the one with egg on your face this time. Making such an AMAZING discovery...actually finding out the true identity of someone on AOL ("in cognito", to quote you directly) when he posts his full name and location on his Member's Profile...and then bragging about your AMAZING discovery here for all to read. Better widen your mouth a bit, Jimmy...your foot just barely fits in there all the way.

>You have been posting all your one line hatefull bullshit in the ham newsgroups
>with a different account and without signing your name to it just to see how
>long it would take ME to figure out it was you.

You or one of your fellow beepers. I know that those who whine endlessly on here about the no-coders being "too lazy" to learn the code are themselves some of the laziest individuals alive. Witness the paunchy stomachs, expanding waistlines, and lack of initiative to embrace new technologies and save the future of ham radio from premature extinction. I figured it would be awhile before any of them actually mustered the neccessary effort to actually click on "Get a Member's Profile" in order to see if maybe, just maybe there was a name attatched. Again, it took 29 days for someone to put forth the effort. Pretty ironic, isn't it?

>OH. OK. Sure. IC. It was just a test. OK. Sure. I got it now.

yes. And you failed miserably. Maybe next time you'll do better.

>you win. Now jump in your 1977 Buick and cruzzzz back over to the CB
>newsgroup.

Can't read well either, can you? Here's a refresher: the Cutlass that I mention in my profile was made by OLDSMOBILE, not Buick. Sorry. Looks like you lose this round, too. C'mon, Jimmy...you have to be able to do SOMETHING else well in life besides beeping...can't you?

Never cleaned the restrooms; I wouldn't know.

BTW, Jimmy, what's this fascination you seem to have with my occupation? Are you another one of those guys who always wanted to be in radio but couldn't cut it? Maybe that's why you became a beeper; your voice wasn't good enough to command attention or respect (?)

Spread Sprectrum Communications Handbook, by Simon, Omura, Scholtz, and Levitt, 1994 (revised edition), 1228 pages. This appears to be written for MSEEs and EE graduate students. Very good condition. $30 + shipping.

From the back cover: "The most complete reference in the field - now available in a single volume... In the past decade, SS systems have found imprtant new commercial applications in CDMA cellular networks and wireless personal communication networks. Communications engineers and technicians now have ready access to a wealth of SS information in this updated, one-volume sourcebook Formerly released as a three-volume set, the Handbook remains the most comprehensive and authoritative compendium on SS systems available anywhere.
"Written by recognized authorities in the field, the Handbook presents both theoretical basics and practical applications, providing succinct, results-oriented solutions to engineering problems. Starting with basic concepts and system models, the book covers anti-jamming communication systems, coherent direct-sequence systems, noncoherent frequency-hopped systems, coherent and differentially coherent modulation techniques, pseudonoise acquisition and tracking in direct-sequence receivers, and low probability of intercept communications. In addition, it offers an in-depth look at multiple access communications and positioning systems applications."

ISBN 0-07-057629-7

Read it from cover to cover; I'll stay with CW.

117. ANNOUNCE: WABC 77 Transmitter tour page

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-02 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <32CB9948.C12@exit109.com>
Source record: 208015

Hi radio buffs!

I have a created a new photo tour page of WABC, NY transmitter site at:

http://www.exit109.com/~jimh/wabc.shtml

called "Jim's WABC Transmitter Page"

At this time all photos of WABC were taken on August 12, 1966. This page glows in the dark, you may have to wear lead glasses <g>! All photos can be clicked to download 640X480 images for your own personal collection.
They may not be re-used in any public manner (see my FAQ page).

Also, please visit:

http://www.exit109.com/~jimh/radiob.html

I have added a total of 22 new photos!

For those who have never visited my radio pages, the main page is called "Jim's Radio Room" at:

http://www.exit109.com/~jimh/radio.shtml

where you can access all pages of photo tours for Voice of America, Radio Canada International, WABC, a virtual 3D tour through an imaginary transmitter site and other pages.

There are also links at the bottom for other radio sites and transmitter manufacturers.

My site is a personal, non-commercial site.

Have fun and Happy New Year,

73
Jim Hawkins - WA2WHV

Message-ID: <19970102005400.TAA27387@ladder01.news.aol.com>
Source record: 208017

I was wondering if anyone could mail me with some answers to the following situation. I don't vist this newsgroup much so I might miss a posted answer.

I am an avid deep sea fisherman. I have found that the local Charter and commercial boat captains now do not use thier VHF radio to discuss fishing locations anymore. They call each other on their cellular phones. A friend of mine told me that if I could get an old scanner, that it would let me listen in to the fishing conversations and get the location of the hot fishing spots.

1) What are the frequencies that cellular telephone are boradcast in.

2) Is it legal to listen (not broadcast) to the cellular channels in the US?

3)What about or Canada or mexico?

4) What distance does the FCC laws extend off the US coastline? (I fish usually about 10-50 miles offshore)

5) If it is legal to listen to the frequencies offshore, then where can I buy a 12 volt scanner to mount in my boat that would get the cellular frequencies?

6) I already have an antenna mounted on my boat for my cellular phone. Can I use this with the scanner?

7) Will a hand held scanner pick up as well as a 12 volt permanent unit mounted in the boat?

Longrigger

A better product for antenna systems would be the purchase of an RF brush. Although hard to find now-a-days, they were used extensively in the past to wipe old RF out of cables that had been in use for many years. This would cause a notable improvement in power to the antenna.

Tom,
You said it is a good rule? Why? Did it stop the Tucker family from accumulating all of the callsigns they currently have for their clubs? I don't think so! Will it stop the Tucker family two years from now? I don't think so! This rule only delays calls from being assigned today. Instead, they will be assigned two years from today if someone applies for them.

This rule does nothing but delay good calls from being assigned to someone today. That is all it does.

Some hams can use this delay to their advantage (I'm not going to describe why they would want to or how they could accomplish this.)

The two year rule does NOTHING to stop trafficking in callsigns. It only slows it down.

Do we need this 2 year delay? I don't think so!

Does that indicate your support of ending the ITU mandatory CW
requirement? It would take that change to allow your
suggestion to be implemented.

Rick,
I agree with you for the reason you went after your new W7AV call.
That is the reason I have chose to apply for a 1x2 callsing. When I
was KN8PXG back in 1959 the OTs had 1x2s and I looked up to them.

1x2s were held by people I perceived had excellent operating skills
and I dreamt of one day having a station like theirs. Now I have an
opportunity to get one of their calls and I've finally decided to take
the plunge.

Now the question is, which 1x2 will I get?

Because of the treaties in place, at least 5wpm is required to
communicate on the HF bands.

I would be in favor of ditching all code proficiency tests in favor of a
single 5 or 10 wpm
test, allowing technical tests to grant greater HF access.

It is how a couple of other countries do it, I understand...

morse code is an antiquated method of communication.

| A better product for antenna systems would be the purchase of an RF
|brush. Although hard to find now-a-days, they were used extensively in the
|past to wipe old RF out of cables that had been in use for many years. This
|would cause a notable improvement in power to the antenna.

I think you'll find they were banned because of the toxic build up of RF
waste in the ground around where they were used, resulting in more and more
"lossy ground" over which it was difficult to erect an efficient antenna.

Have a Yaesu 2070 dual band commercial HT, 32 channels, rapid charger,
program kit & cable, software, manual, etc. Radio does
136-174/440-470. Can be modded to do 470-490 or any split by factory.
$650/bo cash. Please reply asap, no reasonable offer refused.
Radio is in great condition, has a DTMF keypad, PL decode/encode and 2
tone decode board.
Must sell ASAP, $650/best offer. Feel free to e-mail your best offer
or call anytime, 415-939-1037!
This radio is worth over $1300 with program kit, rapid charger, etc...
Evan

I have yet to hear anyone decry the Code Quick system. I'd certainly like to meet someone who thinks it's no good and to hear their reasons why. I bought one myself several years ago and I have nothing but praise for it. It actually made communicating in morse code fun, and fun is what radio (ham or CB) is all about.

: ->Ideally, what I would like to see is a single amateur license
: ->class with question areas stressing electrical safety, technical
: ->compliance, and operating practices.

Interestingly enough, that is how it used to be - just one class of license. It required a good knowledge of communications equipment circuitry, electrical fundamentals, rules and regs, and a 13 wpm code test.

: ->Power level, rather than subbands or mode restrictions, would seem
: ->to be the logical differentiator

: I might suggest that any such homebrewing should be limited
: ->to using no more than a 12 volt DC power source, however, just in
: ->order to reduce the chance the apprentice might harm himself
: ->while experimenting with circuits.

: It'll never fly, Coffman. It makes too damned much sense for our leaders
: to understand.

I would disagree about the voltage limitation. While most homebrewing would most likely be LV stuff - due to the versatility of ICs and transistors, I see no reason to artificially limit a person that way. After all, they have 120 VAC in their house lights - and HV in their televisions.

I don't know how you come up with this. Just because a person likes CW
does NOT mean that they "refuse to accept and embrace modern technology...".

: 'Beepers' cling to the old ways, insisting that the Morse hazing ritual
: remain part of ham radio, regardless of the fact that there is no longer
: any justification for requiring knowledge of such outdated
: technology...thereby scaring away many would-be hams in the process and
: insuring the ultimate death of ham radio due to 'lack of interest.'

No, it just restricts the people who are not interested to frequencies
above 30 MHz. Why the desire for HF usage? It is outmoded. If it wasn't,
the commercial interests (where most of the real communications development
is occuring) would be desiring the frequencies.

So, the Ham interested in modern technology should only be interested in
VHF and above.

Further, with the no-code Tech license, I doubt if any ar "scared away".

You will have to do better than that, Drew.

: and relocating it. Etc. I think you are describing the station of the
: 800 number amateur and not that of the average amateur. It would be
: interesting to hear what others think they have invested in their
: stations.

Three TS-820S transceivers and two FT-101E transceivers - about $2000 total.
Two MLA-2500s - about $1000. Rohn 25g tower - $200. TX5DX Tribander - $250.
Hustler 4-BTV vertical - $100. 3 Inverted V antennas, switches, coax - $250.
Audio DSP Filter - $125.

That all comes to a bit under $5000, and I have far more transceivers than
necessary. Get rid of the "transceiver for each band" and the extra amp, and
the station cost is a bit over $1600.

Of course, it is all used gear, and I am limited to the non-WARC HF bands,
unless I convert one of the rigs for WARC (not difficult).

I tend to think that what the poster meant was, "I'm only a member because it's the only way I can get QST every month."

>ATV is outdated simply because less than 50% use it?

Thank you again for the opportunity to not the illogic of
that type of comparison...specifically: there is NO
pass fail elemeny for ATV questions. Yes, you can skip r
get wrong the ATV questions and still pass the test.
How about including the CW as part of the overall scoring
process instead of as the separate element it now is?
If you haven;t seen that idea before, consider the
following:

Sent To: QST Correspondence 4/96

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of
a CW test at 13 wpm and 20 wpm respectfully along with a separate
theory test. In both cases the CW test is a stand alone, pass (70%
correct) fail requirement. But what if we offered test takers the
opportunity to take the test elements as they do today OR, as an
option, we let them take the 13 wpm or 20 wpm CW test as an integral
part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a
passing score of 70%, they would be granted an CSCE and then take the
theory test as before. However, if they failed the CW test, they
would be permitted to merge the CW test results from that day's test

with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

Oh, why not. This is as good a place, as any, to post another "RE".

My feeling is that the ARRL and QST may be the only amateur radio activity allowed (in a few years) if Congress gets it's way with auctions. We could be going back to the days of WWII when you weren't even allowed to have an amateur RECEIVER in your home (look at the laws concerning reception of cellular calls).

We might just have a period where the FCC simply pulls EVERYONES ham license and sells off all our frequencies to the highest bidder. Just like WWII nobody knew, for sure, if we would EVER be allowed on the air, again.

Join the ARRL (if you can afford it), couldn't hurt!

What Roger fails to see is that the Feds don't care if there is a code
requirement or not. The ONLY reason they adhere to it is that it is still
required Internationally.

Once that requirement is dropped, so, shortly, will be the amateur code
requirement.

Also, Bill thinks that it will be a ham who will bring the first suit against the requirement...guess again. It will, most likely, be a PROSPECTIVE ham who has tasted illegal HF and wants legal HF. Besides, people sue for anything. A ham in Canada was shut down by a neighbor who sued because RF was messing up his electronic thermostat on his furnace "Believe It Or Not!".

I just hope that we still have frequencies to use in the next several years!

> back in the late 60s.

Hi Roger. There are also a number of younger people on as well. I'm 37 (no kid, but certainly not retired yet). Over the Christmas holidays I worked N9TGQ (42), KF4MLG (11 year old kid, with a good fist!), N9HCT (a 25 yr old new father), K7UOT (48), KD4ABS (33), N3OQW (39) on 40 cw. On 20 SSB I worked N7DMO (37). On 15 CW I picked up KF7MD (42), and KJ5LT (39) on 15 SSB. On 10 FM I worked KE4JDR (35), WA4LTX (39), and AE4XJ (33).

BTW, 6 FM was open a bit and I worked KQ4MS (47), KB4MDZ (38), WB5RUA (46), KD4WQS (38), N5XED (45), and WB5WRR (41).

I scanned my log for the last month, and based on the FCC database, over half of my stateside contacts are below the age of 55. I have loads of DX stuff that I don't know about, however.

While they (self included) weren't all youngsters, they were relatively young. I test kids and young people for upgrades nearly every month in Smithfield NC. They are active on HF, because I hear them spotting DX and calling out HF meeting frequencies on the local repeaters.

Happy 1997 to r.r.a.m. !

154. FS/T: Korg 01W Synth for HF Ham Rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-02 00:00:00 UTC
From: peknslk@aol.com
Message-ID: <19970102144200.JAA13774@ladder01.news.aol.com>
Source record: 208052

Hi! I am looking to trade a Korg 01W synthesizer for a 100% functional, clean, portable HF rig, +/- cash, such as:

Kenwood TS50S / TS140S / TS130S
Icom IC706 / IC735
Alinco DX70

The 01W is a 32 voice, 16 channel multitimbral synth with a 16 track sequencer. There are 6 Mb of samples in ROM, and a complete effects arsenal. The keyboard is a 61 key velocity and aftertouch sensitive board.
The rig is in great shape, and includes the manual, Piano/Synth card set, box, and soft case.

$800 + shipping, or trade for an HF rig.

Please drop me a note if interested.

Happy New Year!

I don't understand, I'm an ARRL member but I have not noticed the immense push to retain the code that you imply with your 16,181 reasons.

Personally, I believe that the code requirement will disappear within the next couple of years unless the International community says otherwise. Recently, that has been the FCC's ONLY justification for having it as a requirement for licensing and the first lawsuit filed, contesting the code requirement, will be the end of it.

I am not "anti-code" but am a realist. Our best bet is to push for more stringent requirements for the written tests. So far, code proficiency has done little to further radio technology in our hobby.

Randy

More proof that the ARRL is constantly working for all amateurs... members or not. They petitioned the FCC for an extension of 1 year on the new RF Exposure ruling, and got it for us. Yep, the ARRL did it. Not a bunch of people from r.r.a.m., not XYZ club or individuals, but the ARRL. Just like the codeless ticket, novice enhancement, WARC bands, power input vs. power output, etc...they pulled through again. The extension should allow time for guidelines to be established among the amateur community, charts developed, etc. I breathe a sigh of relief, an await the new ARRL guidelines for station/antenna installation.

>Alaska73's from T.J. KB8JXX Anchorage Alaska.

Sure it can be done. There are several ways. The simplest is to just hook a CODEC to a fast enough modem. WA4DSY does this with his 56 kb RF modem. He can mobile around in his truck and maintain high fidelity, IE CD quality, voice communications back to his home station. Note that this is raw data, it isn't packetized. Of course with some of the CODECs available today you don't need to run 56 kb. 2.4 kbs CODECs exist, though they don't sound very good at all. There are some CODECs with acceptable sound quality that'll run at 9.6 kb. (Acceptable in the sense that they are used in the new digital cellphones, HiFi they are not.)

If you want a switched network, however, you're better off packetizing the output of the CODEC and routing it over a fast enough network. A 56 kb packet network can handle a couple of 9.6 kbs voice links simultaneously without a problem. It can actually handle more, but you may suffer an occasional late or lost packet if the traffic starts getting too heavy, depending on your net topology, IE whether it is contention free or not, and depending on router competence. If you don't need network routing, IE you just need a point to point link, you can do range extension with simple bit regenerating repeaters. Digipeating probably won't hack it because of the latency a digipeater introduces.

CODEC chips and chipsets have become commodity items. Browse the web pages of the chip manufacturers and select one that you like for your application. Or, you can use a software CODEC if you don't mind having a PC at the site. The various internet phone programs implement CODECs in software (using the sound card for A/D).

Hi Tony. 3.880 and 3.885 are pretty much the AM windows on 75 phone.
7.290 and 7.295 on 40, 14.286 on 20, and 29.000-29.200 with 29.000 being
the call freq on 10. See ya on AM!

Dave, your anecdotal evidence is nice, and I'm happy for you, but it
doesn't ring true as a valid statement of how our bands are populated.

The true statistics (which I've seen but don't have at my fingertips)
are far more depressing than what you suggest. Few young people are
getting HF licenses, and listening on HF sounds like a geriatric ward.
The last time I worked anyone below the age of 30 was months ago, and
far and away the most common qso is with retirees. I am unable to
explain your perception to the contrary. I do think that my perception,
rather than yours, is accurate.

members or not. They petitioned the FCC for an extension of 1 year on
the new RF Exposure ruling, and got it for us. Yep, the ARRL did it.<<

Hooray for the ARRL! Good job! BUT...let's look a little closer
here...since the new exposure rules exempt stations running less than 50
watts, which group of hams would be primarily affected by them?

A) No-code Techs running from 5-50 watts (or 49.99 now <g>) on VHF/UHF.

B) HF operators (code required) who commonly run several hundred watts, up
to 1.5KW.

>Just like the codeless ticket

Dave, the ARRL was constantly on record as OPPOSING any type of codeless
license from the very beginning. Only after it became obvious that they
wouldn not be able to stop it from hapening did they fall in line and
"support" the new no-code license class.

Would you care to explain WHY this is so "stupid?" The AOL account now gives me unlimited access for $19.95/month. Full Internet plus AOL's own content. Unlike local providers, it is available nationwide. When I go home for Christmas, as I did this past week for example, I can access with a local phone call. Ditto for the Prodigy account which just might be provided at no cost to me.

>I guess we can add that you are a loser THREE times, since I'm not a foreigner, >I was born in Santa Monica (not that that makes any difference to anyone but a >bigot).

Then why do you use a towel-head name?

>No, let's make that FOUR times, since you apparently haven't got enough
>sense to know that pacbell.net doesn't have anything to do with
>Packard Bell, it's Pacific Bell Telephone, shithead.

Okay. You win this one. My mistake. I saw the pacbell.com and remembered that Packard Bell does have an Internet service. Thought that was the address I had seen some time ago on their literature. Since Pacific Bell does not exist here in Florida, I am not familiar with their services and corresponding addresses. Doh! <g> I goofed.

Actually, from my experience here, I suspect that "some issues" would be more accurate than "a lot of issues." In reality, the biggest one right now is probably the Morse Code issue. It is my personal opinion that in the Morse Code issue, there is no "one voice," because we are clearly so divided.

However, don't let that overshadow the importance of "one voice" in spectrum preservation, much (but not necessarily all) of Amateur Radio's dealings with the FCC, etc. Quite honestly, it is the very frequencies apt to be of interest to the VHF and up operator that need the most defending. I really wish ARRL had the support of more VHF ops so we could better represent Amateur Radio in that work.

>Since No-code Techs are a reality, it might be nice if "our"
>organization would at least offer some measure of support for "them". >It must, if it ever hopes to refelct the views of the entire Ham >community.

Although I have clarified that ARRL will *listen* to those who are not Members, it should be added that, in the long run, we are going to represent ARRL members. In the case of the Code debate, I can see no single position that could represent the views of the entire ham community. What I do suggest is that you become part of the process. You may not persuade the ARRL to your point of view overnight, but, in the long run, it will have an effect. From what I have seen, if the HF op is represented with ARRL, it is because the DXers and the contesters are closely involved with the ARRL Directors and other local officials. Do the same -- become involved. Share your views, as constructively as possible (whether you agree with *me* or not) with your ARRL Division Director.

Actually, our Membership just hit another all-time high, and lots of them
are young enough to be around for a while, so it could be a long wait.
:-)

I don't think there is a single ham who can say that ARRL doesn't support
ANY of their beliefs. I don't think there is a single ham who can say
that ARRL supports ALL of their beliefs. In reality, we all have to
decide whether the things ARRL does support is important enough to you
that you want to support them, do so, and seek to change the rest from
within.

Witholding your support will have an effect. I am not sure it is the
effect that you would really choose. If every ham who thought out of the
many things ARRL does, there was one or more things that were not to his
or here liking, resigned, there would be no one left. When ARRL goes to
bat at the ITU for those who want to take over ham bands, you personally
will benefit because enough other hams were willing to support our
efforts so we could afford to send someone to the meetings (and afford
all of the staff work that goes into their preparation).

ARRL is not perfect, and we will NOT be 100% successful in our work, but
you can rest assured that if ARRL were not there (or its equivalent),
offering some sound reasons for the preservation of Amateur Radio, those
seeking our frequencies would be successful in fairly short order.

Do you really think Amateur Radio will be better off if you withold your
support from ARRL? I encourage you to reconsider.

>code requirement, will be the end of it.
>
>I am not "anti-code" but am a realist.

You're also mis-informed. The past few requests for a no-code or
code reduction licence submitted to the FCC were dismissed with a
summary "we maintain a code requirement because the amateur population
wants a code requirement" explanation from the FCC.

It seems to me that the only way you are going to change that is to
present the FCC with evidence that a majority of amateurs want the
code requirement eliminated. Thus, commission a polling organization
to conduct a non-biased poll of the entire amateur community (it would
take a random sample of about 4,000 amateurs) to determine the true
sentiment.

Note followups redirected.

Gary,

While I can't disagree with the idea that ARRL could be more proactive
in technical leadership (even if we increased our technical activity by
an order of magnitude, I would say the same), I just can't imagine what
action we have taken that would lead you to conclude we have been "in the
forefront of opposition" to introducing new modes.

Good luck with your efforts on a 1x2. You put it better than I when you stated that these old ops set a great example for the rest of us (I too was KN6JEN). They seemed to know everything and were happy to help us new comers. I think it's a tribute to those pioneer's that their old calls are heard again.

If you are implying that the only reason ARRL got involved was because
this would affect HF operators, you are wrong. The frequency range of
30-300 MHz has the most stringent requirements. It is over this
frequency range that the antenna gains are apt to be higher than on HF.
These regulations affect the HF and VHF+ operator pretty much equally.

One other important point: ALL stations, regardless of power level, must
comply with the regulations on Maximum Permissible Exposure (even my 10
milliwatt HF station). Stations running less than 50 watts, or
mobile/portable stations with PTT, are categorically exempt ONLY from the
requirement to perform a routine station evaluation because they are
presumed to be in compliance by virtue of their power or duty cycle.

This pretty much reflected the wishes of ARRL Members over the time
periods involved. I will point out that once the decision was made, the
ARRL "fell into line" and supported the concept that all hams are hams,
regardless of the requirements of their license class. The New Ham
Companion section of QST is an example of our sensitivities to the number
of newcomers to ham radio since the no-code license was introduced.

>73 de Dave Hockaday WB4IUY

This is an example of the types of things for which there probably is "one voice" for Amateur Radio. (There are a few who might disagree that we should have asked for an extension, but I believe there is concensus amongst the Amateur community that this was the appropriate step to take.) The ARRL does have a few Petitions for Reconsideration before the FCC, primarily to fine tune the regs, but, pending the final decisions, we realized that neither the FCC or hams were ready to complete the steps necessary for hams to comply. Most in ARRL believe that it is important that all hams follow the rules, and when we saw a set of circumstances under which rules were about to go into place that hams just couldn't comply with, the path was pretty clear.

I will point out, too, that what was done by ARRL was done by the best of our best, ranging from the group of outside experts who were advising me and reviewing my work, to the ARRL Board who made the policy decision to seek extension and change to our Washington folks who helped us craft it all correctly.

Concur. Nice job by ARRL. Now let's hope that the guidelines are
transformed into something that the average ham can llive with. I have
confidence that the ARRL (of which I am a longstanding member) will do
its best in this regards.

I'll bet that Dave Sumner can. :)

However, I agree with you. Anyone who cares about this hobby should
join the League. Period.

I agree with the above, although I thought that Leonard Nimoy was
already SPOCk. (He said so in his last book).

I don't really think, from what I have read here, Bill, that the ITU's rules are the problem. The FCC is not bound to abide by them. But I said a long time ago that a no code general would be fine with me. I just don't happen to go along with Squiggys 'Give Me ALL or Give Me Nothing' routine......

If that's true, then I suggest that some of those no code techs get jobs, so
that they have $30 a year of disposable income they can spend on ARRL
memberships.

I thought that was an AT&T trademark.

I disagree that the ARRL is our only voice, true or otherwise. The
ARRL may be the largest amateur organization, but there are others.
TAPR, AMSAT, QCWA, etc, and they have prevailed over the ARRL before
the FCC in the past, and likely will again in the future.

The ARRL would like to be SPOC, and has made backroom deals to
achieve SPOC, but we haven't yet completely lost our basic right
as US citizens to directly petition our government. If and when
that happens, it will no longer be our government. It will be tyranny.
And as Thomas Jefferson said, from time to time the tree of liberty
must be watered with the blood of tyrants (and alas, with the blood
of patriots too). Let us hope the ARRL never becomes our ONE AND ONLY
TRUE VOICE, for that will be the day our essential liberty dies.

I don't keep track of who prosecutes anybody but me. So what you are saying, Spew, is that it's OK to break the rules, as long as nobody is looking. Another good reason to keep you off the ham bands......

Last month I finally got my new call, N7LN. I really like the sound
of it and the fact that if you turn it upsidedown, it still reads the
same call.

Anyway, I don't know anything about the history of the call. Could someone
please check it in an old callbook and tell me who had it before? I'm
really interested in this, but haven't been able to find out ANYTHING
about it.

Thanks.

The current no-code license was implemented after a proposal from the
ARRL
for the "Communicator" license. The ARRL did NOT fight against the
no-code
license the last time it came before the FCC.

I have two radios that I would like to program.

1. GE Phoenix SX. 16 Channel Model, Vhf-Hi, 25 Watts out.

2. GE MLS 8 Channel Model, Vhf-Hi, 40 Watts Out.

I am looking for any Info/software that will allow me to program up these units. I plan to move them both down to the 2-meter ham band.

Thanks

Irvine (bromo@ix.netcom.com) (no callsign?) wrote that "treaties require at least a 5wpm code test", and that "Morse is antiquated."

Well Irv, please tell me which treaty discusses code speed (if you can't back up your assertion with some references, then you're really only stating an opinion).

Morse antiquated? Not on the HF/MF ham bands. Now, should amateur testing reflect what other services do or don't do? If so, then because AM is still used for domestic and international broadcasting you must believe the amateur exams should cover theory and circuit analysis of Amplitude Modulation. (But then we'll have to listen to the howls from the anti-AM crowd on here!)

Roger,
Very true. And as I remember, was this not the grounds used
several times by courts that dismissed suits brought by Glenn Baxter
K1MAN against the ARRL over the past 3 o 4 years?
As I recall, Baxter and/or his International Amateur Radio Network
sued the ARRL and/or its QST magazine production employees a number of
times on various ham radio related issues.
I also believe that he also once claiming that the refusal of QST
to publish his adds for equipment repair (after ARRL/QST had received
numerous complaints about the service he provided) violated his civil
rights. And, as I also reacall -- each time the court said the case had
no rational basis in fact or law.

That's not a legitimate matter for government regulation. As long as he
is not in any danger of injuring other people, causing interference to
other users, etc., his safety is his own concern!

Compared to what? Depends on how you look at it. Are you talking about the DX nets on 14.2265 and 14.247? Are you talking about the Hurricane nets on 14.325? The occasional net type operation in the DX window? The truck drivers traffic net? The IOTA net sometimes on 14.260? The amtor and rtty traffic nets???

You need to be more specific.

Some people think there are too many, some think just the right number.

Most DX "Big guns" say too many. Many new DX chasers cut their teeth on the DX nets.

Just out of curiousity, why do ask?

Say hello to Eric for me. And while you're at it, how about sending some warm weather up North?? Just 10-15 degrees on top of what we have would be nice.

192. Any qsl info on W1AA???

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-02 00:00:00 UTC
From: kgraniero@aol.com
Message-ID: <19970102215100.QAA24110@ladder01.news.aol.com>
Source record: 208090

Hi..I worked W1AA and before I could get qsl info he faded out. He told me they were the Marconi Radio Club located in Mass. The callbook shows that address to a ham in Arizona I believe..Does anybody have correct qsl info this this station?? Thanks..Kevin

193. Re: Could someone please check N7LN history? (new vanity call)

I checked in a 1973 call book. I could not find any record.
good luck
73 Mike

->tbryant@cannet.com (T.L.Bryant) wrote:

->
->I doubt indorsements

The word is spelled endorsement.

will work for two reasons. One, the FCC isn't interested in
->keeping track of who has what, and two, there is no one to police them.

Amazing. Just like today, where they keep within their own band limits by
honor and a general sense of obeying the law until it is overthrown.

Just keep repeating the same lies over and over again until people believe
it is the truth...

>periods involved. I will point out that once the decision was made, the

And those time periods go back to at least 1946. There was a mail in
ballot (in the March QST, I think) asking whether or not a new license
class should be created that didn't require Morse and had privileges
restricted to frequencies above 1215 MHz. This was to accomodate all
the "microwave men" coming out of the military. Obviously, the
members gave it the thumbs down.

Too bad. We'd have made more advances sooner and had more folks in
the hobby. Remember, the ARRL responds to those who pay the freight and
increasingly, it's Oscar Foxtrots paying the freight. :-)

OK. We'll know it's you if we ever see your car upsidedown in a ditch :<)

>Anyway, I don't know anything about the history of the call. Could someone

N7LN was Larry Nelson, of Phoenix, Az., one of the most infamous QRM'ers on the 20 meter ham band. He was know on 20 as 'Loud Larry'. He often said he had made W.A.S. with OO pink slips. He was fined numerous times by the FCC, mostly for malicious interferance, and I think his license was finally revoked. He was also well know as a scrapper, and was involved in several fist fights at hamfests. You might want to check the Phoenix newspaper archives, there should be some articles regarding an incident where he broke the windshield out of an FCC monitoring van with a baseball bat. I believe that was in '88 or '89. I think Larry died in '92, maybe '93, when he was shot by a police officer during an armed robbery of a 7-11 store. Ask around on the 20 meter nets, I'm sure lots of people there will remember him. Most people didn't like him, but I always thought he was fun to listen to.

197. "Unmanned Station" Questions....Hmmm.....

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-02 00:00:00 UTC
From: Deals <rsmerker@frii.com>
Message-ID: <32CC141B.3610@frii.com>
Source record: 208095

Sorry for my Ignorance, but I simply cant remember what the
exact guidelines are for an "Unmanned" station, or even if it
is permitted, and I cant seem to find specific info on it....
I have 2 Scenarios :

I have a Transmitter controlled by my PC, It monitors on 14x.xxx for
DTMF tones (Sent by my HT at remote location), when successfully
recieved, It Responds back by Transmitting a short CW sequence,
including MY Callsign. Is this Legal? (Using Simplex)

Also, is there any regulation which says I cant do the same thing
over a repeater? (Other than possibly the Repeater Regs)?

Any input would be appreciated - Thanks!

Richard Smerker

Only Spew could think that reproducing publically-available information
in a publically-available USENET newsgroup is "harassment".

By-the-by Spew, how does a Judge prove "stalking" when the defendent is
on the West Coast?

>Now you've just crossed over into the "ridiculous" category. Time to go
>talk to someone a bit more rational.

Obviously you don't talk to yourself very much then.

In article <5agv9f$psk@mgate.arrl.org>, Ed Hare <ehare@arrl.org> wrote:

>I will point out that once the decision was made, the
>ARRL "fell into line" and supported the concept that all hams are hams,
>regardless of the requirements of their license class. The New Ham
>Companion section of QST is an example of our sensitivities to the number
>of newcomers to ham radio since the no-code license was introduced.

With all due respect to my very good friend Ed Hare, whom I admire and
respect very much, I must categorically state that he is totally full of
horse-pucky when he makes this comment. (Hi Ed! :-))

I pose this question to Ed: Why does QST now contain "The New Ham
Companion"? Your answer, above, is illogical. Why do the needs of
"new hams" differ today (as no-codes) than they did half a decade
ago (as coded techs/novices)?

I submit to you that the reason the "New Ham Companion" is necessary
is not due to the codeless license, nor the "number" of new hams coming
into the hobby through it, but is in fact due to the continued
dumbing-down of our licensing requirements in an attempt to gain
large numbers of hams from the lowest-common denominator of society --
utter morons.

There is, generally speaking, little information in the "New Ham
Companion" that isn't easily answered by merely referring to your
radio theory (which supposedly you >know<, if you passed the test)
or asking a local elmer if you are not sure or do not have the necessary
materials handy. The remainder of the information is hardly for
the "new ham" specifically, but is of general interest to >ALL<
hams.

So, Ed, when you say the League is sensitive to the number of no-codes
entering the hobby through the new license, I submit to you that you
are full of horse-pucky, and the New Ham Companion is necessary
only because the policies of the ARRL have lead to a whole sub-class
of idiot hams.

I am wondering what makes those portions of the bands sorry. I have
had no problem making contacts on those bands. And as far as 10
meters most of that spectrum is used by every class liscence. I will
have to say 10 meters is one of the nicest bands. I will have to agree
that 40 mtr Novice/Tech+ band is poor because of broadcast stations,
but 80/15/10 are excellent.If you look at a band plan 80-15 is only CW
and 10 has a big portion of phone. I am wondering about the comment
about when the bands are usable it is mostly CW for Techs, last time I
checked it was for Novice and Tech+.

All of the equipment is from US Tower Corporation.

You'll have to pay for removal and transportation yourself, from the
northwestern Indiana region.

Model No. Description Weight(lb) Orig. Price

--------- ----------- ---------- -----------
HDX-555 Self-Supporting Tower 870 2309.00
(Free-standing heavy-duty crank-up tower)
CX-3 Coax standoff arms 8 69.00
IV-16 Inverted Vee Arm 5 33.00
MDP-750 Motor Drive w/ Pull Down 185 1539.00
MCL-100 Limit Switch Package 7 389.00
TRX-80HD Raising Fixture 155 539.00
TB-2US Thrust Bearing for 2" Mast 10 89.00
with 2 Flange Holes

4967.00

Plus...an antennae from Mosley Electronics, Inc.

CL-33-M Antennae 425.00

And a reinforced steel base for the tower (350.00 + 150.00 labor)
Sum total of $5742.00 (w/o labor) originally.

All of this equipment is nearly unused, as the original owner passed
away before he could put it to use.

Asking $3000.00 OBO. Serious offers only, please. First come, first serve
basis on offers.

Email offers, or questions, to pumpkin@bilbo.bio.purdue.edu

Thanks. =)

Hi Jerry if u are looking for the Flying Horse Intl Callbook, to the best of my knowledge it is not on the web. However many Intl calls and managers can be found thru the listings below, all of which are accessible (clickable) from the AC6V Reference page URL below.

QSL Info System by IK4LZH -- DX Lookup Page for Managers and DX Addresses

QSLs By BuckMaster -- US and some Foreign. Gives Grid Squares, Lat/Long.

DL5MO QSL Info Databases search -- Three Data Bases for DX Lookups.

DK0TUI's QSL Info Page -- Callbooks for VE, UK, OH, GJ, BV, Contest QSL Info

QSL Information By E-Mail -- Got A Tough One ?? Try This.

Mike's Amateur Radio Pages -- Download Over 43,560 QSL Managers!!
--
AC6V DX Reference Page: http://www.netcom.com/~ac6v/index.html
E-Mail: ac6v@ix.netcom.com

Hi Kevin.. The QRZ Data Base shows:

Callsign: W1AA
Club Name: MARCONI RADIO CLUB
Addr1: 153 COUNTY ST
Addr2: LAKEVILLE MA 02347
Country: USA
Effective: 20 Nov 1996
Expires: 20 Nov 2006
Trustee: ROBERT J DOHERTY K1VV
Location: 41.832 N 70.954 W Plymouth County
Email: ROBERT.DOHERTY@FMR.

You can get to the QRZ Data Base thru the AC6V DX Reference Page below.

Hi Mike why not just make a link to ARTSCI at URL:
http://www.artscipub.com/repmain.html

On the AC6V DX Reference Page below there are numerous Repeater listings
to several countries as well as ARTSCI:

Alaska -- VHF/UHF Listing
Australia -- HF and VHF/UHF Listing
Belgium -- 2 m/70 cm/23 cm/ATV Repeaters, Beacons, Packet Nodes, Map
Canada -- Southern Alberta Repeater Listing
Canada --Repeaters Listings for locations in Canada
Greece -- Repeaters
Iceland -- Great Main Page
Israel -- IARC Listing of Repeaters
Latvia -- Ham Radio and Repeater Listing
Lebanon Repeaters
Lithuania --From LY Land
Netherlands -- Some Dutch Repeater Listings
Philippines --Repeater Frequency List
Spain -- Uniï¿½n Radioaficionados Espaï¿½oles
Slovenia -- Official S5 Repeater Listings
United Kingdom --RMG-On-Line
USA Repeaters -- By ARTSCI

>2) Is it legal to listen (not broadcast) to the cellular channels in the
>US?

It is illegal to listen to cellular and cordless transmissions in the
United States. More about this can be found by referencing the Electronic
Communications Privacy Act.

>3)What about or Canada or mexico?

I have no idea.

>4) What distance does the FCC laws extend off the US coastline? (I fish
>usually about 10-50 miles offshore)

Unlike the official shoreline limits the FCC holds jurisdiction over
particular ITU regions, even if that region surpasses a coastal reference.

>6) I already have an antenna mounted on my boat for my cellular phone. Can
>I use this with the scanner?

You could use the current antenna if your intention was to listen to
Cell frequencies but there are probably better antennas out there for the
purpose. But remember, listening to cellular telephone conversations is
illegal but only if you tell someone else you've listened in. :)

ARLP001 Propagation de KT7H

ZCZC AP01
QST de W1AW
Propagation Forecast Bulletin 1 ARLP001
From Tad Cook, KT7H
Seattle, WA January 3, 1997
To all radio amateurs

SB PROP ARL ARLP001
ARLP001 Propagation de KT7H

Solar activity was down over the past couple of weeks, as we settle back into conditions consistent with the bottom of the solar cycle after the recent, probably final upsurge in activity from the dying cycle 22.

Looking at the long term, recent data shows that sunspot numbers probably bottomed out around June or July of last year, but should return to late 1994 levels around June of this year. By August some projections show sunspot numbers about three times what they were during the same month a year earlier, and by December about four times the average for December, 1996.

For the ARRL RTTY Roundup this weekend look for slightly rising solar flux to the mid-seventies, with a possible small bump in geomagnetic activity coming Monday. Based on the 27 day solar rotation, the flux is expected to rise to around the mid-eighties by January 14, then drop below 80 a few days later, bottoming out in the low seventies from January 17 through the end of the month.

Recently 15 meters has seen some improvement, although a lot of the observed propagation is north-south, also referred to as trans-equatorial. Look for openings on 17 through 10 meters during daylight hours, and good conditions on 20 meters. Look for conditions to be best on 20 after sunrise and again before sunset. 40 meters is still a good bet for long and medium distance propagation, and given the continued low solar activity, look for openings on 80 and 160 meters during the long hours of darkness.

Recently we have been unable to get solar flux numbers resolved to a tenth of a point. This should change soon.

Sunspot Numbers for December 19 through 25 were 23, 13, 28, 26, 24, 0 and 0, with a mean of 16.3. 10.7 cm flux was 87.4, 83, 83.7,

81.5, 79.5, 79 and 77, with a mean of 81.6. Planetary A indices for the same period were 2, 2, 4, 6, 10, 3, and 6, with a mean of 4.7.

Sunspot Numbers for December 26 through January 1 were 0 every day, which is a mean of 0. 10.7 cm flux was 76, 75, 74, 74, 73, 72 and 72, with a mean of 73.7. Planetary A indices for the same period were 3, 1, 4, 3, 8, 4, and 2, with a mean of 3.6.

I just bought one of these beauties yesterday and was told by many that after awhile, I'd wonder how I lived without it. Well after one day, I am beginning to believe.

Strung up an 75m dipole last night and it made the whole job a whole lot easier. Made the antenna with standard calculation, strung it up at the operating height, slapped on the 259 to confirm that it was resonate on the freq of choice. All without ever transmtting into the antenna. Attached the antenna to the rig and off I went with 1.1:1 SWR.

Of course, everybody knows Morse Code is a publicly known code.

When I got the chance to speak on HF, it was something I'd
coveted for over two years of operating CW.

Then WOW - I got the general license, and could talk on 20m!

Hmmm, just like talking in real life. Morse was different,
unique, interesting. My microphones are now rarely used.

I feel sorry for those of you who, out of spite, don't learn
it (because someone tells you you have to).

>Cellphone were originally designed with features to, hopefully, protect
>cellphone users from people listenning in.one feature, is that the cellphone
>system will randomly, move the user to another channel. Like an altra slow
>form of spread spectrum.

This is totally wrong. The Cellphone designers did not have privacy
in mind when they designed the system, if so they would have put some
form of encryption in place. In fact rather than add about a dollar
to the cost of each phone to add encryption, they lobied congress to
pass the unenforceable ECPA of 1986.

The cellphone system does not "randomly move the user to another
channel" the users are moved only when the present channel's signal
strength decreases below a preset level. If the signal strength is
fine, the channel is not changed for the life of the conversation.

>I am not trying to rain on your parade, but the basic idea behind them
>using cellphone rather than vhf is privacy. Perhaps you should respect that.

That is a good point, but respect includes not lying about the
technology involved. Legally he can no longer purchase, in the US a
scanner that can cover those frequencies, Morally this is as wrong as
listening to private conversations. The people using cellphones
should not expect privacy, since it was not designed into the system.

>community & that new group is more up-to-date in what is desired in ham
>radio.

And how do you know that the ARRL is not already doing just that? You make this statement as if you already think a major portion of amateur radio participants want an HF codeless license. Sorry, it just isn't so.

> I disagree, somewhat. Majority rules but why does it have to be the
>current ham community?

Using this logic I'm sure the people of Mexico would appreciate me voting in their elections.

> There are plenty of non-hams who'd like to get their license.

Yeah, we heard this line of reasoning before. 8 years ago to be exact, when the existing codeless tech license was proposed. Guess what? It wasn't so back then. It ain't so now (its even worse, given the popularity of computers and the Internet).

Anyone with even a slight understanding of cell technology knows what a
total joke this comment is. Moving a cell phone from one frequency to another
is merely a data signal that the control tower sends to the cell phone
outside the audio passband. Anyone with the appropriate equipment
(such as an AOR-2500 and a DDI interface) and capture the data stream,
decode it, and switch frequencies automatically along with the cell
phone itself. Complete, uninterrupted listening pleasure for your
enjoyment.

There's a new control program for the IC-706 on the ARRL ftp site. I believe the filename is simply ic-706.zip. Unfortunately (for me), the program only runs under Windows 95 or Windows NT. The LOG-EQF shareware program also supports the IC-706 and a number of other radios.

>I personally believe that the biggest issue affecting us is our lack of
>numbers, particularly on the HF bands. I predict that the "Little Leo"
>people will be frustrated because on VHF we do have considerable
>numbers. The FCC, as a political organization, is sensitive to this. I
>predict that we will keep two meters.

The FCC, as a political organization, will do whatever it takes to maintain
it's own existense, even if it means selling off spectrum to the highest
bidder.

>However, in other contexts, our lack of numbers has already clearly
>injured the hobby. I will cite two examples:
>
>1) Consumer Electronics -- today, manufacturers of consumer electronic
>devices such as telephones and radios, routinely skimp on flitering them
>against RFI, with the result that if there is an HF ham in the area,
>interference is guaranteed. Although legally the ham is not liable, in
>reality, we all know better. It becomes the ham's problem. This forced
>me to cease SSB operations in my last QTH. If there were ham operators
>every couple of blocks, manufacturers wouldn't dare do this: too many
>complaints would get back to them.

The burden of proof lies with the person who if complaining of RFI.
I've had no complaints of RFI where I live since just about everyone is on
cable. I've been at my present QTH 14 years.

>2) Antenna Ordinances -- hams get pushed around on antenna ordinances
>and CC&Rs because we are few in number. We are frequently viewed as a
>pesky, cranky, nuisance. If our numbers were greater, we would have the
>political clout to get ordinances that favor our particular special
>interest group. Too often (but not always, thank God) we don't.

Won't argue there. There are ways around such ordinances, however. Especially
if they use the term "permanent structure" in the law.

>I favor eliminating CW because I believe it is a key factor in our
>greying and dwindling numbers.

The thing that you're using to write this message is what's killing ham radio,
not the code requirement.

>Many old timers remember what happened with CB. Lack of entry
>requirements caused it to be a disaster. Many of us still remember
>this, and will do anything to prevent ham radio going down the same
>road. I agree with this. This is a common reason many people still

>favor the CW requirement even though they know in their hearts that
>Morse Code is obsolete (not just obsolescent).

I still use my CB radio and find it just as enjoyable as ham radio. While the craze of the late 70s has died, CB didn't go "down the tubes."

230. Re: Pro & Cons on Cordless Telephone Headsets????

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-03 00:00:00 UTC
From: Rich Wall <richwall@asan.com>
Message-ID: <32CDDF62.7CC9@asan.com>
Source record: 207929
Cross-posted to: rec.radio,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

The pros are the obvious freedom of a cordless headset.

The cons are great, in my opinion.

1)You can be listened to by other cordless phones, scanners, baby monitors and other devices. This results in no privacy.

2) If you live in an appartment or densely populated community, you can hear other handsets or headsets using the same frequency or channel you are on.

3) The batteries in the cordless unit can die with little or no notice. Nicad batteries have a fast "drop-off" and the time spent off the charger is limited.

4) In some cases other handsets or headsets can capture your base unit's dial tone and dial out on your line. This problem has been resolved with the newer models using security codes.

These problems become more evident in apartment dwellings where the chances of other having a cordless close to yours is strong.

I hope this helps you with your concerns.

Rich

>
> They are pretty slick huh? They are excellant for "picnic table" antenna
> projects and experimenting...no more dragging out extension cords, swr meters,
> radios and so on...It's a great investment!

I also find it to be great for adjusting my manual (Drake) antenna
tuner. I put an antenna switch in the line so that I could connect
either the analyzer or the Xmtr to the tuner. Switch the tuner into the
circuit, dial the desired frequency into the analyzer, twiddle with the
tuner knobs until I get a match, switch the Xmtr back into the tuner,
and I'm off and running!

Just don't lend it to anyone! It can't take rough handling, so you
should go along if someone else's antenna needs tuning.

Take it to Field Day. You'll be the most popular ham in the place! :)

Please let me reiterate that I belong to the League, support the League,
and do not mean to denigrate the League. We NEED the League. This does
not mean that we should not speak out on the internet forum, which is
the best forum we have (and it is very visible) to let Newington know
our thoughts on these matters.

As I will continue to say, the Morse requirement 1) is not required to
filter out "CB" types; and 2) turns off many or even most potential
newcomers to our hobby. This is not desireable. The requirement is no
longer advantageous to our hobby, or for any other reason. It is time
to say farewell to it; it served its purpose well, but time marches on.
(I remember this every time I look at my recently-arrived grey hairs.)

>does today is "because the amateur community wants it that way."
>So existing radio amateurs do have a responsibility for the way
>the licensing system is today. Of course there is also S25.5
[snip]

I know, I know! However, I was getting rather peeved at the incessant railing against the "Old, pro-code, Extra-class hams..." and so on. My only point was: "Don't yell at us, yell at the bodies with power to change things." The epithets were simply starting to bug me, is all.

I got fed up because I am a terrible example of the stereotypical Extra as referred to above. I'm pushing 30, not 80. I love and use CW all the time, BUT I see validity on BOTH sides of the debate, not just the "Pro-Code, Beeper" side, as is assumed all over the place. I'd support a no-code HF ticket if care was taken to preserve and/or formalize the sub-bands, and to ensure that newbies didn't descend uncontrollably all over the HF spectrum.

To me, the single greatest knowledge a ham needs is NOT code, NOT theory, NOT rules and regs, but GOOD OPERATING SKILLS. I'm talking about politeness, etiquette, precision, efficiency, doing everything the 'right' way. Despite all of the technical proficiency, and all of the super-fast coders, this subset of skills is a dying priority. There are barely any questions on any of the tests that address it. Novices, Techs, Generals, Advanced, and Extras all exhibit the symptoms - and fine examples that defy the trend exist in all classes as well.

When I read all the rude stuff here on Usenet, I worry. I worry because I can picture that abrasive, vocal "no-coder" spewing the stereotypes being the first guy to key up on my HF QSO. Especially if I'm "beeping" at the time. If I felt he respected me, I'd be happy to support a license class that allowed him HF access - but I'm not convinced that he does.

So clean up this debate, and focus your energy in productive directions - your local clubs, the ARRL, the FCC, and the ITU.

Message-ID: <5aft61$nre@zonk.geko.net.au>
Source record: 207935

I am sick of hearing all these people complaining about having to learn morse code in order to get a ham radio license. I am a newbie to ham radio and I am only 14 years old. I do not know morse code (but I definately will be in the near future). I must learn it in order to get my license, there is no way they are going to change it so I just decided I WILL learn it. Hey, if all the others can do it why can't you? I think you SHOULD know morse code in order to transmit mainly for the reason that it means that I know the people that I talk to are keen and are of a decent intelligence! So all you people who keep complaining just SHUT THE FUCK UP! You MUST learn it to get your license, so learn it, if you spent all the time you use complaining to learn it you would know it by now!

Sorry.. I just couldn't hold it any longer.. I apologise for any offensive language.. I just hope I get through to them.

In another thread it has been mentioned that the ARRL has
petitioned the FCC to raise the limit from 50 to 150 watts.
That'd change things for most hams, both VHF and HF.

In reality, most HF hams do not run 1.5KW.

There is, however, something to be said for simplicity when it comes
to communication. For example, you can't communicate with someone
when you don't know they're transmitting. Someone might, for
instance, figure out that there's something going on up on the GPS
carrier frequencies, but they'd never in a million years figure out
what it is without side information.

>NASA's Voyager and Pioneer craft communicate

>or bettered by the amateur today for a pittance and a few chips.

I'm not sure which craft are still operational, but over 10 years ago,
the Voyager S/N had dropped so low that the transmission rate was
reduced to a few characters per minute. I wonder what they're down to
now.

Then start petitioning outside the ham community. Or petition the tech & the tech plus crowd. Send me a petition to sign. Start another ham representative group to show how poorly the ARRL represents the ham community & that new group is more up-to-date in what is desired in ham radio.

>It seems to me that the only way you are going to change that is to

>code requirement eliminated. Thus, commission a polling organization
>to conduct a non-biased poll of the entire amateur community (it would
>take a random sample of about 4,000 amateurs) to determine the true
>sentiment.

I disagree, somewhat. Majority rules but why does it have to be the current ham community? There are plenty of non-hams who'd like to get their license. Poll outside the ham community. If it has to be hams really don't think 1% polled is valid.

Yea, I did the code & I think anyone who can get their techplus can get their General, on up. But, things change, I can handle that. It's ok to change the rules but it's not going to happen here. You're not changing the rules for me. You all that want things changed, start writing to the ARRL & the FCC. Let them know what the current hams feel what ever your license is.

As I indicated previously in this thread, I use the same antenna. You
might be interested in the fact that I have installed the Kenwood
without any holes in the JGC. I used heavy duty velcro to mount the
face plate ahead of the shifter, the speaker on the front of the
console, and the mike jack on the right side of the console. With the
glass-mount antenna, it is a completely no-holes installation. Has
held up for about 3 years this way with no problems.

The FCC may have jurisdiction over US registred ships anywhere in the world, however, for foreign registred ships, the FCC jurisdiction ends at the end of the territorial waters (usually 12 nautical miles). I do not know if the US has declared a 200 nautical mile economic zone, so fishing within this zone in a foregn registred ship might be a problem.

A ship moving in Region 2 should follow the ITU Region 2 frequency limits, but the FCC can only enforce this for US registred ships anywhere in the region and only within the territorial waters of the US for all ships.

Interesting question
Cellphone were originally designed with features to, hopefully, protect
cellphone users from people listenning in.
one feature, is that the cellphone system will randomly, move the user
to another channel. Like an altra slow form of spread spectrum.
I am not trying to rain on your parade, but the basic idea behind them
using cellphone rather than vhf is privacy.
Perhaps you should respect that.

>requirement.

You may be right, Drew, but I think this is a case of chicken and egg.
Let's look at a hypothetical situation, possibly based somewhat in
reality, but not being offered as fact. If a substantial amount of our
active support comes from those who favor the retention of the Morse Code
requirement for HF access, we have to realize that these people are
Members NOW. Can you really expect that ARRL would take a position
against the wishes of its current membership with the hope that others
who feel differently might join? (Another discussion. :-))

In reality, ARRL is very concerned that the no-code Technician is the
least represented in our membership. We hope that in time that will
change. When it does, if the majority of hams, especially ARRL Members,
feel that it is time for Morse to go, in the long run, they will
prevail. In the meantime, although there are a number of hams who feel
that the Morse issue is important enough to them that they feel that
they and Amateur Radio are best served if they do not support ARRL, a
number of hams, including anti-code-test folks, choose to offer their
support and, in the long run, will be the ones who make the most
difference in the positions of the ARRL.

Gary, I think you forgot the :-). I have noted that you tend to extremes in your conclusions, but this one may have gone a bit off the deep end. But it did start my day with a smile.

First, I am always amazed that we are not able to keep all of our "backroom deals" a secret; there are always those who offer that they know exactly what happened in them. Are you offering fact, or conjecture?

I will ask one question -- if ARRL is doing all these backroom deals to become the only voice of Amateur Radio, why have we offered support, including substantial financial support in some cases, to groups like AMSAT, TAPR, etc? This is not the action of an organization that is seeking to undermine their efforts because exactly the opposite is true.

As I have said, there are many areas for which Amateur Radio benefits from "one voice;" there are many where we are strengthened by our diversity. I support ARRL because they represent me where I think it counts. Perhaps today they represent my love of Morse Code, perhaps someday they will not. Either way, they are seeking to protect my vital interests where it cound, so I will continue to support them overall even if I end up disagreeing on an issue of two.

I have been licenced since the mid 60's, as ve3fxq.
Granted I had to learn the basics of electronic theory and code to pass the exam, but, I believe I learned the basics of amateur radio from my first several years as an amateur, on cw.

Operating CW, during the first few years as an amateur, allows you to make you beginners mistakes in semi private on cw contacts.

Two meters is fine but it shouldn't be used at the meat and potatoes of your amateur hobby.

I do volunteer work at the canadian national exhibition during the last half of august. A number of non hams tell me that cw is dying. When I let them listen to 20 cw, they are amased at the amount of cw activity. I suspect that the majority of amateurs, that have gotten over the 2 meter fad, tend to use hf. I also suspect that most hf amateurs use cw at least 50 percent of the time.

CW, technically, might be a dying art, but, it does have it's benefits. As mentioned before, its a great training ground for beginner amateurs. No one will blame an amateur for being on cw too much but if you dominte vhf/uhf repeaters too much, and many amateurs do, you can get a bad reputation, that you may not even be aware of having.

Most amateurs get their hf qsl cards, and make dx contacts, etc, using cw.

The main problem with cw is the time and effort it takes to initially learn the letters and numbers and punctuation marks, the time it takes to bring your speed up to something usable (eg 5 words per minute) and the time it takes to bring your code speed up to 15 to 20 words per minute which seems to be the speed of 'normal?' hf use.

In my opinion cw, is not easy to learn. It does take time and persistance. But, in my opinion, and in the opinion of the majority of amateurs, it 'is' worth the time it takes.

I learned cw in boy scouts. I heard that you needed morse code to pass your amateur radio licence. Like many i couldn't see why I had to learn the code when all i heard amateur do was use voice. My uncle, then ve3dmc, educated me on the fact that amateurs use morse code and that i would have to spend at least one year on hf using more code before i could get my advanced and be able to use voice. I thought i would then not have to use it, use voice all the time.
i spend time and learned the code. After i got my amateur licence, i listened to voice and made some cw contacts. i found cw was hard to copy and understand.

as time progressed, a month or two, i found that i spent less and less time listenning to voice and more time just randomly copying cw contacts. most of my time was now spent making cw contacts. After i got my advanced i got the mike out and started to make voice contacts. i soon found myself going back to cw. i, essentially, stayed on cw from 1965 untill the early 70's. I got involved in 2 meter fm, but soon again, found myself back to cw.

cw does have its advantages, but, you have to give it a chance. if the need for cw, to gain access to hf, is dropped it will be a sad day for amateur radio.

larry ve3fxq

264. Reflecting the desires of the members...

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-03 00:00:00 UTC
From: Dave Hockaday <wb4iuy@ipass.net>
Message-ID: <32CD33B4.147E@ipass.net>

> >>Dave, the ARRL was constantly on record as OPPOSING any type of codeless
> >>license from the very beginning. Only after it became obvious that they

> And those time periods go back to at least 1946. There was a mail in
> ballot (in the March QST, I think) asking whether or not a new license
> class should be created that didn't require Morse and had privileges
> restricted to frequencies above 1215 MHz. This was to accomodate all
> the "microwave men" coming out of the military. Obviously, the
> *members* gave it the thumbs down.

The ARRL is supposed to confer with it members to represent them. They do. The statement was made above about a mail in ballot in 1946. If the majority of the members voted "no", then the ARRL was supposed to go with the membership's wishes. If the majority had voted "yes", I imagine there would have been a codeless license a lot earlier. That's the way most organizations/clubs work. I've been president of our radio club a couple of times, and I always had to act on the desires of the membership, not my own. I could only suggest my point of view, just as the ARRL must have in 1946 by sending out the ballot in the first place.

If a person wants to change things, they have to have a voice. The ARRL is _the_ "shaker and mover" when it comes to amateur radio. They have sponsored more rules changes than any other organization related to amateur radio. They're respected by the FCC and have a long term standing relationship with them. If there is a majority of amateurs out there that want a codeless HF license, they should support the ARRL and make their desires known. A petition would carry a lot more weight coming from a respected organization that represents thousands of amateurs, than coming from a few individuals. They have the mechanism to make it work.

I've been an amateur since 1974. I've read about the desire for a codeless license for 22+ years. However, when the ballots were circulated, it was the membership who decided that they didn't want it, not the ARRL officials. Had all those people who did want it been members, it would probably have happened a lot sooner. People can't stand on the outside of the ARRL and complain about their actions. They simply try to reflect our desires.

3 cheers to the ARRL!

*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.3, 28 December 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Thomas's SoundModem driver.
Jonathons user_call programs.
Added some ax25d configurations hints - Tomi's suggestion.
Corrections/Updates:
fixed axparms command to reflect current version.
fixed some old file definitions that I'd missed.
updated net-tools location
Updated 2.1.* section.
Made the call program more obvious.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
recommend you also read these as they will assist you in your efforts
```

and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>,

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>,

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now supported by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of

how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 2.0.xx kernel source.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

It is stronly recommended that you upgrade to the most recent 2.0 kernel. Jonathon specifically recommends not using a kernel less than 2.0.12 for AX.25 purposes as some minor bugs were fixed in that and later versions.

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/base/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different strains of AX25-utilities. One is or the 2.0.* kernels and the other is for the 2.1.* kernels. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel.

The AX.25 utility programs can be found at Jonathon Naylors home site:

www.cs.nott.ac.uk <http://www.cs.nott.ac.uk/~jsn/>

or by ftp from:

ftp.cs.nott.ac.uk

/jsn/ax25-utils-2.0.12c.tar.gz

or:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.12c.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.27.tar.gz
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please

make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Prompt for development and/or incomplete code/drivers [Y/n] Y
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools should compile cleanly against the kernel source without
error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.0.12c.tar.gz
# cd ax25-utils-2.0.12c
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package properly installed on your system. The configuration script attempts to locate your ncurses packages in the common locations, but some installations have ncurses badly installed and it is unable to locate them.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure it to work as a `vanilla' AX.25 interface with no TCP/IP. The following configuration will get you to the point of being able to make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode or with other cards such as the Ottawa PI2 card, PacketTwin and other SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create an AX.25 port ready to use to make outgoing calls. For other types of hardware you need only complete the first step.

Note: all AX.25 ports must have unique callsigns. This is currently a non-negotiable design constraint.

6.1. Creating the /etc/ax25/axports file.

The AX.25 ports have a configuration file that is read by many programs that want to find information about an AX.25 port. This file is called the:

/etc/ax25/axports

file. The format of the file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

In it simplest form you can use the axattach program as follows:

/usr/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS0 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /etc/ax25/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for 8530 SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin
section for the names of the network devices to use.

6.3. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you
to make use of both modems on a dual port TNC. Configuration is fairly
simple. It works by taking a single serial device connected to a
single multiport TNC look like a number of devices each connected to a
single port TNC. You do this before you do any of the AX.25
configuration. The devies that you then do the AX.25 configuration on
are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial
device.

Example: if you have a dual port tnc and it is connected to your
/dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/axattach /dev/ttyp0 port1
# /usr/sbin/axattach /dev/ttyp1 port2
```

would create two tty devices: /dev/ttyp0 and /dev/ttyp0 that each look
like a normal single port TNC. You would then treat /dev/ttyp0 and
/dev/ttyp1 just as you would a conventional serial device with TNC
connected. This means you'd then use the axattach command as described
above, on each of those, in the example for AX.25 ports called port1
and port2. You shouldn't use axattach on the actual serial device as
the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish
to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame.
This is not supported by most KISS implementation, it is
supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by
default. Most KISS implementation do not support this, but some
do.

-l enables logging of information to the syslog logfile.

6.4. Testing the AX.25 interface.

You now should be able to make outgoing AX.25 connections. To test
AX.25 connected mode you could use the call program as demonstrated:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

Note: you must tell call which AX.25 port you wish to make the call
on, as the same AX.25 node might be reachable on any of the ports you
have configured.
The call program is a linemode terminal program for making AX.25
calls. It recognises lines that start with `~' as command lines. The
`~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon
has modified the axattach command so that you can include the IP
address that you want the interface to be configured with on the
command line. For example, to modify the example presented earlier, I
could use the command:

```
# /usr/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 235 Linux Switch Port

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If
you do not have an entry in /etc/ax25/nrbroadcasts for a port
then this means that no NetRom routing will occur and any
received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that
it is started automatically each time you reboot.

8.5. Testing the NetRom interface.

You now should be able to make outgoing NetROM connections. To test
NetRom connections you can use the call program as demonstrated:

/usr/bin/call netrom VK2DAY

Note: you must tell call which NetRom port you wish to make the call
on. You might have to wait until your NetRom routing tables fill with
routes before you can reach a remote node.

The call program is a linemode terminal program for making NetRom
calls. It recognises lines that start with `~' as command lines. The
`~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu
of 512 and configured with the details from the /etc/ax25/nrports file
for a NetRom port named netrom you would use:

/usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
route add 44.136.8.5 nr0

or you could use something like the following commands manually:

ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-9
route add 44.136.8.5 nr0

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

If you don't actually want to run tcp/ip on your ethernet device then all you need to do is use the:

```
# ifconfig eth0 up
```

command to activate the interface.

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 ether
```

This says that AX.25 callsign specified for the port ether in the /etc/ax25/axports file is to be associated with the eth0 device.

10.1. Configuring BPQ to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card
```

```
INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
```

```
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

```
BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held
belief that it would not work very well, has developed Linux support
for Baycom modems. His driver supports the Ser12 serial port, Par96
and the enhanced Par97 parallel port modems. Further information
about the modems themselves may be obtained from the Baycom Web site
<http://www.baycom.de>.

When the driver is running it follows the standard of looking like a
KISS interface, so you treat it in much the same way as you would the
PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled
module support into your kernel, and also selected the appopriate
options to support the Baycom driver during the make config stage when
compiling your kernel.

The relevant options that you must answer `Y' for are:

Prompt for development and/or incomplete code/drivers [Y/n]
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Compiling the setbaycom utility

A configuration utility is available available from Thomas Sailer's
home page <http://www.ife.ee.ethz.ch/~sailer/ham/baycom.tar.gz>. The
setbaycom utility allows you to configure multiple Baycom devices. If
you intend to do this then you should obtain it and install it.

To compile and install, do the following:

```
# cd /usr/src
# tar xvfz baycom.tar.gz
# cd baycom
# make
# make install
```

13.3. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

```
# mknod /dev/bc0 c 51 0
# mknod /dev/bc1 c 51 1
# mknod /dev/bc2 c 51 2
# mknod /dev/bc3 c 51 3
```

You will use these later. If you installed the setbaycom utility then
this will have been done for you.

13.4. Loading the module.

When the kernel compilation is complete and you have installed the module baycom.o wherever you normally keep your modules (conventionally they are stored in /lib/modules/2.0.0/), you must start the module. The module takes configuration paramters from the insmod command line, so you must start it manually from an rc file or if you use the kerneld program you must configure it with the relevant paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your /etc/conf.modules file:

alias char-major-51 baycom

There are four main items to specify when loading the module, they are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.5. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.6. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.7. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. The setbaycom utility allows you to configure multiple Baycom devices.

The command line arguments needed are identical to those you'd supply to the module if you were configuring just a single device. For example, to configure both of the devices presented above you would use the commands:

```
# setbaycom -i /dev/bc0 -p ser12 0x3f8 4 1
# setbaycom -i /dev/bc1 -p par96 0x378 7 0
```

13.8. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /etc/ax25/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/NetRom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a

cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.
<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Valid call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments specified.

<cmd-name>
is the text that should appear in a ps as the command name running (normally the same as <cmd> except without the directory path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-0]
NOCALL * * * * * L guest /usr/games/fortune
#
defaults 1 10 * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 * root /usr/sbin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-0 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-0 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

If you wanted to define rules for another interface, a NetRom
interface for example, then you would add another paragraph coded in
the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the
important features of the syntax of the configuration file. Jonathon
includes a much longer and more detailed example in the ax25-utils
package that you should look at if you need more information.

14.3. Some ax25d configuration hints.

Here are some simple hints for you to consider while configuring ax25d
on your machine:

Split your services up
You have 10 SSID's, make use of them. If you have configured
your ax25 port for tcp/ip then it will use the callsign you
assigned in your axattach command. It is best to avoid mixing
tcp/ip, NetRom and plain AX.25 connections on the same SSID.
Split them up and you will avoid problems later.

Use the defaults feature
Choosing sensible defaults can simplify your configurations
immensely. If you choose sensible defaults you will only need to
add exceptions to the default as things change over time.

14.4. Starting ax25d

When you have the two configuration files completed you start ax25d
with the command:

# /usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to
your Linux machine. Remember to put the ax25d command in your rc files
```

so that it is started automatically when you reboot each time.

14.5. Configuring the node software.

The node software was developed by Tomi Manninen
<tomi.manninen@hut.fi> and was based on the original PMS program. It
provides a fairly complete and flexible node capability that is easily
configured. It allows users once they are connected to make telnet,
netrom or telnet connections out and to obtain various sorts of
information such as Finger, Nodes and Heard lists etc.

The node would normally be invoked from the ax25d program although it
is also capable of being invoked from the tcp/ip inetd program to
allow users to telnet to your machine and obtain access to it, or by
running it from the command line.

14.5.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports 70cm 2m

# Callserver
# If configured the node provides users with access to a callserver.
callserver zone.oh7rba.ampr.org

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800
```

```
# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"
```

14.5.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ax25 User connected by AX.25
netrom User connected by NetRom
host User started node from command line
local User is telnet connected from a 'local' host
ampr User is telnet connected from an amprnet address (44.0.0.0)
inet user is telnet connected from a non-loca, non-ampr address.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users to enter a password when they connect. This might be useful to help protect specially configured users who have high authority

levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 127

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 31
* netrom * * 31
* local * * 31
* host * * 31
* ampr * * 31
```

14.5.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do
this you need to add appropriate rules to the /etc/ax25/ax25d.conf

file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[VK2KTJ-1 VIA VK2KTJ-0]
default * * * * * 0 root /usr/sbin/node node radio
```

This simply says that all users who connect to VK2KTJ-1 on the same device (by the same port) as VK2KTJ-0 should cause the node program to be run with the name of the port they have connected via, in this case you will recall the /etc/ax25/axports specifies the port name as radio that supports the callsign VK2KTJ-0.

14.5.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 4000/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 4000 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

14.6. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it

first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

14.6.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.7. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.7.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/bin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.7.2. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.7.3. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.7.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

14.7.5. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to

add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

14.7.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

14.8. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

15. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

```
# axparms -assoc vk2ktj terry
```

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

16. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
parameters 1 5 2 900 900 15 0
default * * * * * * * root ax25_call bpq vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu
ally be the Linux ax25d daemon and then be automatically switch to an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

16.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by

using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.
You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

17. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

ax25
contains the AX.25 port configuration information.

ax25%lowbar;bpqether
contains the AX25 over ethernet BPQ style callsign mappings.
ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

ax25_route
contains AX.25 digipeater path information.

nr contains the NetRom port configuration information.

nr_neigh
contains information about the NetRom neighbours known to the NetRom software.

nr_nodes
contains information about the NetRom nodes known to the NetRom software.

18. Walking on the wilder side .. the developmental software

If all of the above doesn't satisfy your desire to push the limits there is plenty more for you to play with.

There have a been a number of enhancements that are available as experimental software for you to try. They come either as patches against the 2.0.* kernels, or in the alpha 2.1.* kernels.

Be warned though, this software is new, pretty much untested and likely to contain bugs. If that worries you, then ignore this section of the document.

18.1. Enhanced versions of just about everything.

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler.

all drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin etc now present a normal network interface, that is they now look like the ethernet driver does, they no longer look like KISS TNC's. A new utility called net2kiss allows you to build a kiss interface to these devices if you wish.

bug fixed
there have been many bug fixes and new features added to the drivers and protocols.

To take advantage of the features of the 2.1.* AX.25 support you must use the new ax25-utils package. You shouldn't use a kernel older than 2.1.17 and you should use ax25-utils-2.1.17.tar.gz which is available from the sites listed in "The AX25 Utilities" section above.

18.2. ROSE Packet Layer Support

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

18.2.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

```
rose 5050924760 Rose Port

Note that the ports are referred to by name by programs such as call.

18.2.2. Creating the Rose device

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command:

# rsattach rose

This command would start the Rose device (rose0) named rose configured
with the details specified in the /etc/ax25/rsports file.

18.2.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

# rsparms -nodes add 5050295502 radio vk2xlz
```

would add a route to Rose node 5050295502 via an AX.25 port named
`radio' in your /etc/ax25/axports file to a neighbour with the call&#65533;
sign VK2XLZ.

```
Kernels 2.1.17 and later support variable length Rose masks, so that
you you may specify a route that looks like:

# rsparms -nodes add 5050295502/4 radio vk2xlz
```

which would be identical to the previous example except that it would
match any destination address that matched the first four digits sup&#65533;
plied, in this case any address commencing with the digits 5050. An
alternate form for this command is:

```
# rsparms -nodes add 5050/4 radio vk2xlz

which is probably the less ambiguous form.

18.2.4. Testing the Rose interface.

You now should be able to make outgoing Rose connections. To test Rose
connections you can use the call program as demonstrated:

/usr/bin/call rose VK2DAY 5050928860

to connect to VK2DAY at Rose node 5050928860.

The call program is a linemode terminal program for making Rose calls.
It recognises lines that start with `~' as command lines. The `~.'
command will close the connection.

Please refer to the man page in /usr/man for more information.

18.2.5. Configuring ax25d to accept incoming Rose connections
```

The ax25d daemon included in the ax25-utils-2.1.* packages supports accepting incoming Rose connections. The procedure is virtually identical to configuration for AX.25, or NetRom with the major difference being that the port label has taken on a slightly modified syntax. An example Rose configuration would look something like:

```
#
# Format for ROSE:
# {Callsign VIA ROSE port}
#
{* VIA rose}
parameters 7 100 10 * * 5 0
#
default * * * * * * * root /usr/sbin/pms -b -u %u -o vk2ktj
```

The `* VIA rose' says: `Accept connections to any callsign via the rose device named `rose' in the /etc/ax25/rsports file. If the entry looked like:

```
{VK2KTJ-9 VIA rose}
...
...
```

then only connections to VK2KTJ-9 received via the port named `rose' would match.

18.3. Enhanced Baycom modem driver.

In kernel 2.1.17 and newer, the setbaycom utility has been replaced by the sethdlc utility. Additionally the Baycom driver no longer uses device file in the /dev directory, so if you've upgraded you can delete the old ones with:

```
# rm /dev/bc[0-9]
```

18.3.1. Configuring the Baycom driver.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the baycom module using:

insmod baycom

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

sethdlc -p -i bc0* mode par96 io 0x378 irq 7

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

sethdlc -p -i bc1 modem ser12 io 0x3f8 irq 4

18.3.2. Configuring the AX.25 channel access parameters.

Configuring the what ? The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

sethdlc -i bc0 -a txd 10 slot 5 ppersist 128 full

Note that the timing values are in 10's of milliseconds.

18.4. Soundcard DSP based modem driver.

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.
The driver currently emulates 1200 bps AFSK and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

18.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal'. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:

setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

18.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.
For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

insmod soundmodem hw=0 mode=0 iobase=0x220 irq=5 dma=1

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

insmod soundmodem

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
# ifconfig sm0 up
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
# ifconfig sm1 up
```

18.4.3. Configuring the AX.25 channel access parameters.

Configuring the what ? The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 10 slot 5 ppersist 128 full
```

Note that the timing values are in 10's of milliseconds.

18.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

18.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The axparms utility is used to perform this.

```
# axparms -setcall sm0 vk2ktj-4
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-4.

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other, configure it for tcp/ip, add it to ax25d and run NetRom or Rose over it as you please.

18.5. Run time configurable parameters

The 2.1.* kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port. The structure of the files is as follows:

```
No. Name Meaning Default
1 IP Default Mode 0=DG 1=VC 0
2 AX.25 Default Mode 0=Normal 1=Extended 0
3 Allow Vanilla Connects 0=No 1=Yes 1
4 Backoff 0=Linear 1=Exponential 1
5 Connected Mode 0=No 1=Yes 1
6 Standard Window 1 <= N <= 7 2
7 Extended Window 1 <= N <= 63 32
8 T1 Timeout 1s <= N <= 30s 10s
9 T2 Timeout 1s <= N <= 20s 3s
10 T3 Timeout 0s <= N <= 3600s 300s
11 Idle Timeout 0m <= N 20m
12 N2 1 <= N <= 31 10
13 AX.25 Frame Length 1 <= N <= 512 256
14 Max Queue 1 <= N <= 20 2
15 Digipeater Mode 0=None 1=Inband 2=XBand 3=Both 3
```

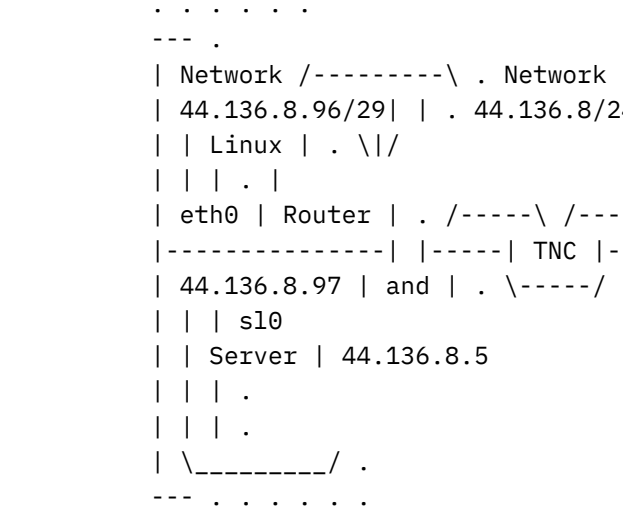
In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

19. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

19.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."
```

```
echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0
```

```
The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

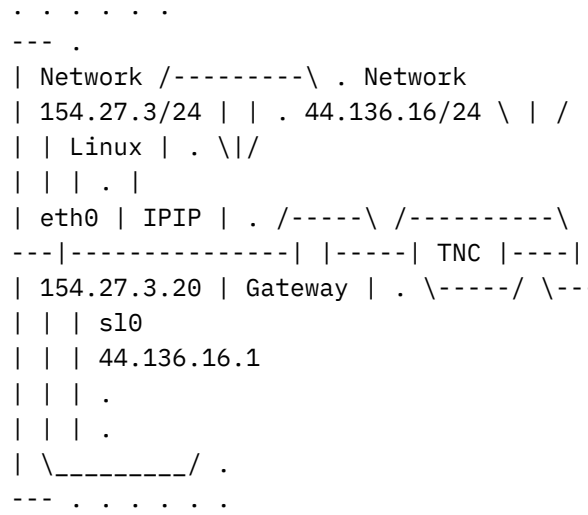
• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

19.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
```

```
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"
echo "#"
echo "# remote routes"

fgrep encap | grep "^route" | grep -v " XXX.XXX.XXX.XXX" | \
awk '{
split($3, s, "/")
split(s[1], n,".")
if (n[1] == "") n[1]="0"

echo "#"
echo "# the end"
```

20. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and
zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

What we are looking for must be easy to use, at least for most ham situations. The ARRL Technical Department (okay, me!), with lots of sage advice from the RF Safety Committee and a cadre of experts I have assembeld around me, has been, and will continue to funnel info to the FCC so they can prepare a useful method that hams can live with. Others are doing the same, so we will end up with a solution that represents the best of our best. Lots and lots of real antennas, in compliance distance tables, is the direction we are all moving.

ARRL asked for, and was given, the year to give us all time to do this correctly. (Amateur Radio has been asking the FCC for more enforcement, to get rid of those who says <diddlyblatz> on 14.313 or their local repeater. IMHO, this makes it critical that hams follow all the rules.)

I personally don't find either of their postings to be useful. They are designed more to hurt than to help and, overall, the types of insults they are offering detract from the usefulness of this discussion group, I am always amazed that some people say things here that most would consider impolite in face-to-face communication.

I really don't mind if you have to dance, but I would appreciate if your are somewhat selective -- there are some who have stated their opinions in a courteous, civilized and productive way (me, I hope!). I do trust you will be careful not to include their heads in the dance. :-)

Although I'm not familiar with the case you reference, based on the facts you give, that's a different legal theory, but leads to the same end. Basically, the aggrieved party in the situation you mention discovered that no one has any duty to facilitate another's free speech. So the party in this case had no legal cause of action.

I've never heard of this. The audio channel is assigned based upon availability at the cell site. It may be changed during hand-off to a new cell site when you move. I never heard of it randomly changing just to keep someone from listening in. I'd be interested in knowing of some cell providers are doing this.

> Tom - N8ECW

I personally believe that the biggest issue affecting us is our lack of numbers, particularly on the HF bands. I predict that the "Little Leo" people will be frustrated because on VHF we do have considerable numbers. The FCC, as a political organization, is sensitive to this. I predict that we will keep two meters.

However, in other contexts, our lack of numbers has already clearly injured the hobby. I will cite two examples:

1) Consumer Electronics -- today, manufacturers of consumer electronic devices such as telephones and radios, routinely skimp on flitering them against RFI, with the result that if there is an HF ham in the area, interference is guaranteed. Although legally the ham is not liable, in reality, we all know better. It becomes the ham's problem. This forced me to cease SSB operations in my last QTH. If there were ham operators every couple of blocks, manufacturers wouldn't dare do this: too many complaints would get back to them.

2) Antenna Ordinances -- hams get pushed around on antenna ordinances and CC&Rs because we are few in number. We are frequently viewed as a pesky, cranky, nuisance. If our numbers were greater, we would have the political clout to get ordinances that favor our particular special interest group. Too often (but not always, thank God) we don't.

I favor eliminating CW because I believe it is a key factor in our greying and dwindling numbers.

Many old timers remember what happened with CB. Lack of entry requirements caused it to be a disaster. Many of us still remember this, and will do anything to prevent ham radio going down the same road. I agree with this. This is a common reason many people still favor the CW requirement even though they know in their hearts that Morse Code is obsolete (not just obsolescent).

However, the success of the no-code Tech program has shown that theory tests and a formal licensing structure is enough to prevent the "CB effect." 99.9% of the new Techs are FB ops, and add to our hobby. They

have rejuvenated VHF, which is now the most vital and dynamic part of
our hobby. Let's spread this benefit to HF by doing away with the CW
requirement!

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.2, 10 October 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
cw2hex - a program to assist in making keyer eproms

Corrections/Updates:
Fixed XNet web site details, ooops, thanks Carl.
Many minor smgl syntax fixes.

2. Where to obtain new versions of this document.
```

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite.

The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper
Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,
G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.
The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is
suitable), a VHF-FM receiver that can tune to 145.825 MHz, a
small yagi antenna, and a communications program such as Minicom
that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through
a terminal program, error checks the received data, and applies
calibration equations to the received data to produce a report
that can be easily understood and analyzed. uo11 comes pre-
compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

cd /
tar xvfz uo11.tgz

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.
Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via

the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by
email.
Licensing/Copyright
You may copy this program millions of times, the only

restrictions are:

- You may not charge ANYONE for the program itself.

- You may not distribute modified versions of the program.

- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan manager could use to analyze and manage traffic. The tools present a graphical view of all of the traffic received at the monitoring node allowing the observer to easily see where the traffic flows normally and other information such as:

- Packet counts

- Node statistics

- Network Utilisation figures

The network is displayed with icons representing hosts and lines between them representing the traffic flow. The graphical display provides an instantly absorbable view of the traffic on the network being monitored. Richard has more information and sample displays at: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.2. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.1, Stable

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/monax25-1.1.tar.gz>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.3. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you

use the splitscreen program to access services like convers

Where and how to obtain it
The splitscreen package is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/splitscreen-1.4.1.tar.gz>

Licensing/Copyright etc.
Public Domain

5.4. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional
Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/talk-ax25-960426.tgz>
or from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/talk-
ax25-960426.tgz>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be
retained.

5.5. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary
files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them
to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The 7Plus encoder is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/7pl217sr.tgz>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.6. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.7. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the

desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.8. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.9. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.10. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

- It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

- The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at

multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog programs).

• clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises the following modules:

```
con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
```

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

• The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

• A console monitor to watch ongoing activities

• Speed optimization

• An internal clx protocol

• An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

• 00Index

• clx_200.tgz

• install.clx

• README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.11. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU, wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS, DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de
Description
A suite of programs that provide BBS and Terminal programs for Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.12. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation

gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.13. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps

directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.14. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.15. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.16. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the configuration of your system at all. If you have root access on your machine then you run the program in a VT or in an XTerm and it will clear the screen and wait for an incoming connection on

port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.17. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and
convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

```
# cd /usr/src
# tar xvfz ttylinkd-0.02.tar.gz
# cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
# make
# cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
# killall -1 inetd
```

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. cw2hex

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.

Status
version 1.1 is tested and ready to go.

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.2. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.3. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.
System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or

the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.4. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/oscope-1.0.tar.gz> or from its home site at: www.bobsplace.com <http://www.bobsplace.com/~twitham/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.4.1.tar.gz>
or from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks. Andrew is working on an X-Motif version to be
released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz>
and sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.
Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like

mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?
Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-
Windows? Does it need a soundcard? Does it need a certain
version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece
of software as this would consume a lot of time reading and
trying to keep up to date. So instead what I'd like to list is
what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

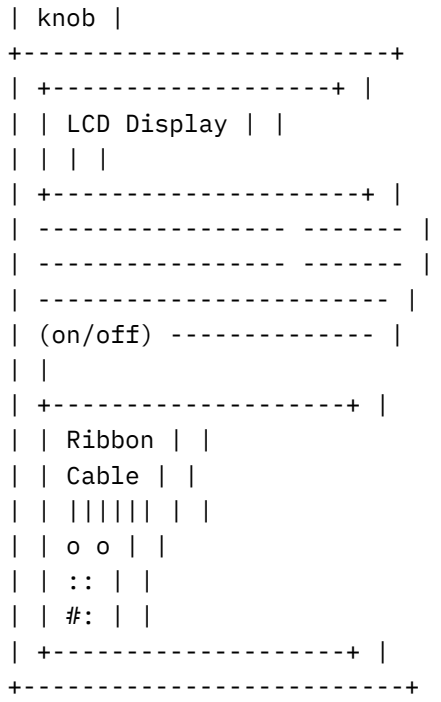
275. Mod For The FT-10

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-03 00:00:00 UTC
From: kb9mci@aol.com
Message-ID: <19970103165900.LAA18992@ladder01.news.aol.com>
Source record: 207999

Yaesu FT-10 Extended Transmit Mod for 140-174MHz use.

1. Remove antenna and battery.
2. Locate the Ni-Cd battery sticker on the back of the radio chassis.
Pry up the corner of the sticker and peel it off carefully.
3. Remove the two screws located under the sticker. These retain the
keypad.
4. Slowly lift off the keypad. Use care not to dislodge the gasket.
5. Locate and unsolder the 0 ohm chip resistor at location "M" (see
diagram below).
6. Re-install keypad with two screws. Be sure gasket is properly seated.
7. Replace the Ni-Cd sticker if desired. Reattach battery and antenna.
8. Press down and hold the Top-Notch and Lamp button while turning the
radio on.



= Location "M", chip resistor to remove

If memory serves me, the board actually has an "M" near the correct
resistor.

If the League seeks to be progressive, and lead, yes. If it is simply a reactive organization guarding its turf, no.

The League must lead its members as well as listen to their preferences. The League should seek to represent and safeguard amateur radio, not merely cater to the wishes of its aging membership. That's what it did, rightly or wrongly, with incentive licensing, which tore the hobby up a lot more than doing away with the CW requirement would. Getting rid of CW at least wouldn't effect current hams' operating privileges.

Frankly, it is pretty clear that the ARRL fears having no code HF types, because I think it fears that they too will not join the League in great numbers, per your remark below. This would torpedo any claim that the League has that it speaks for the hobby as its "one voice." Can you tell me that this is not its real motivation for continuing to support the absurd morse code requirement?
>
> In reality, ARRL is very concerned that the no-code Technician is the
> least represented in our membership. We hope that in time that will
> change.

Morse Code is killing our hobby by deterring people from joining it. VHF is pretty lame compared to what you can do on HF, at least in the perception of many non-hams I've talked to. I hope the hobby doesn't grey and dwindle away before we wake up to this.

SPACE SUCCESS: MIREX QSOs MADE WITH THREE SCHOOLS

"Yes! Yes!!!! Yes!!!!!!!!!" That was the reaction of Bruce Burke, WB4YUC, in late December as he helped students at Silver Lakes Middle School in North Lauderdale, Florida, talk with US astronaut John Blaha, KC5TZQ, aboard the Russian space station Mir. The contact--the first scheduled school QSO between unlicensed students and a NASA astronaut-ham living on board Mir--marked a new page in the history of ham radio in space. On Friday December 27, Blaha spoke with 17 students at the Silver Lakes Middle School. Halfway through the contact, Mir Commander Valery Korzun extended his greetings to the students and congratulated them for being the first Americans to take part in this kind of contact. At the end of the QSO, the

students wished Blaha a happy new year. School group contact coordinators for the Motorola ARC Kai Siwiak, KE4PT, and Burke said signal strength was outstanding throughout the pass.

The FCC only recently approved third-party contacts with Blaha from the Russian Mir space station. However, the FCC's permission only extends through Blaha's mission, thus clouding the prospects for such contacts involving other US astronauts on Mir. Over the past year, the SAREX team has worked closely with the Mir International Radio EXperiment (MIREX) team in the United States, the Space Amateur Funk EXperiment (SAFEX) team in Germany and the Mir Amateur Radio EXperiment (MAREX) team in Russia to allow unlicensed school students in the US to talk to the astronauts on Mir.

Two other MIREX QSOs also went off on schedule. On Saturday, December 28, students at Granby High and Mary Calcutt Elementary schools in Hampton, Virginia, successfully contacted Blaha aboard Mir and got to put a dozen questions to the astronaut. Blaha attended Mary Calcutt and graduated from Granby High School in the 1960s. The 10-minute contact was conducted from the Amateur Radio satellite station exhibit, KE4ZXW, at the Virginia Air and Space Center. Blaha told the students he had some Granby/Calcutt memorabilia on board Mir that he expects to return to the schools.

Monday, December 30, students at The Johnson School in Warrenville, Illinois, got to ask Blaha how the Mir crew emptied the trash. In all, the students got to ask 15 questions as an audience of some 900 people (including approximately 450 youngsters) looked on. Enthusiasm at all three schools was high despite the fact that the students were on Christmas break, and volunteers, parents and teachers had to take time away from their holiday activities to arrange for equipment and operators.

As a result of the QSOs, all three schools got a lot of media attention. "These Mir QSOs are so very important since competition is accelerating against SAREX being selected as a payload on the last few orbiting shuttle missions of 1997 and 1998 prior to International Space Station activities," said Rosalie White, WA1STO, ARRL Educational Activities Department manager.

Five more schools have been scheduled for contacts before the end of Blaha's mission in mid-January. Schools wishing to arrange contacts with astronauts aboard a US space shuttle carrying the SAREX payload should submit a SAREX application to the ARRL Educational Activities Department (EAD), e-mail ead@arrl.org. More information about the MIREX and SAREX programs is available at http://www.arrl.org or check the Mir Web page at http://www.osf.hq.nasa.gov/mir/.--Frank Bauer, KA3HDO

SIXTEEN SCHOOLS SELECTED FOR STS-83 SAREX CONTACTS

Sixteen schools, including institutions in the People's Republic of China and on Okinawa, have been picked for scheduled SAREX contacts during NASA's STS-83 space shuttle mission. The tentative launch date is March 27. Three hams are scheduled to be aboard the shuttle Columbia. They are James D. Halsell, KC5RNI, mission commander; Janice E. Voss, KC5BTK, payload commander and Donald A. Thomas, KC5FVF, mission specialist. The STS-83

flight is scheduled to last 16 days. The mission will carry SAREX configuration C: voice and packet. The mission's primary payload is the microgravity science laboratory.

The schools selected for STS-83 SAREX contacts are:

* Alvin C. York Agricultural Institute, Jamestown, Tennessee (assisting club: Fentress County Radio Club)
* Artesia Public Schools, Artesia, New Mexico (assisting club: Pecos Valley Amateur Radio Club)
* County College of Morris, Randolph, New Jersey (assisting club: Morris Radio Club)
* Crittenden Middle School, Mountain View, California (assisting club: Ames Amateur Radio Club)
* Edgewater High School, Orlando, Florida (assisting club: Edgewater High Amateur Radio Club)
* Ione Junior High School, Jackson, California (assisting: Dave Larsen, N6CO)
* Lawrence Intermediate School, Lawrenceville, New Jersey (assisting club: Delaware Valley Radio Association)
* Lester Middle School (Department of Defense Dependents Schools, Pacific), Okinawa, Japan (assisting club: Radio Society of Okinawa)
* Lexington Traditional Magnet School, Lexington, Kentucky (assisting club: Bluegrass Amateur Radio Society Inc)
* Mountain View Elementary School, Dewey, Arizona (assisting club: Yavapai Amateur Radio Club)
* Public School No. 9, New York, New York (assisting club: Cooper Union Amateur Radio Club)
* Robert J. Burch Elementary School, Tyrone, Georgia (assisting club: Fayette County Repeater Association)
* S. J. Davis Middle School, San Antonio, Texas (assisting club: Southwest Research Center Amateur Radio Club)
* Sonny Carter Elementary School, Macon, Georgia (assisting club: Bibb County Amateur Radio Emergency Service)
* Troy Intermediate School, Troy, Texas (assisting club: Temple Amateur Radio Club Inc)
* Tsinghua University, Beijing, Peoples Republic of China (assisting clubs: China Radio Sports Association and Tsinghua University Amateur Radio Club.

AMSAT volunteer mentors will be assigned and they will contact the radio coordinators this month to assist each school and/or radio club throughout the entire process.--Glenn Swanson, KB1GW

HEARD ISLAND DXPEDITION DEPARTURE DELAYED

A strike in France has delayed the departure of the Heard Island (VK0IR) DXpedition team from Reunion Island. The team had been ready to set sail today (January 3, 1997). Instead, the team now will leave January 5 and head directly to Heard Island without making a planned stop at Crozet Island. John Devoldere, ON4UN, reports that the French Regie Maritime, the semi-official agency that manages all ferries in France, is going on strike for two days starting today; the crew of the Marion Dufresne, the expedition

vessel, is going on strike as a sign of solidarity with their brethren in France.

The Heard Island DXpedition team has been active as TO0R from Reunion Island for much of this week, mostly on 160 meters at 1826.5 kHz. The group expects to land on Heard Island on January 12 at the latest and leave the island at month's end. On the sail back to Reunion Island, the team will stop at Kerguelen Island "for about one day," Devoldere said, adding that "the chances to operate on Kerguelen are minimal due to the limited time available."

Those interested in having a blow-by-blow account of the DXpedition can send a "subscribe" message (leave subject line blank) to heard-request@ve7tcp.ampr.org.

NORTH AMERICAN DIGITAL SYSTEM DIRECTORY TO BE ONLINE

With ARRL support, the Tucson Amateur Packet Radio Corporation (TAPR) now will provide information on digital systems that formerly appeared in the annual ARRL Repeater Directory. The digital directory information will be available at http://www.tapr.org/directory. By not including digital system listings in the 1997-98 edition of the Repeater Directory, the publication can better focus on its primary use as a guide to voice repeaters for traveling amateurs.

In planning the 1997-98 edition, the ARRL concluded that the Repeater Directory was no longer the most effective medium for this information. Discussions involving various regional digital groups that provide data to the digital section of the Repeater Directory led to the conclusion that TAPR was the logical group to take on the task of a new North American Digital System Directory.

This new database will describe systems used by Amateur Radio stations involved in digital communications in United States, Canada, and Mexico. The Digital System Directory will be based on information provided by regional, state, and local organizations as well as individuals, in a nearly real-time format. This should allow information to be maintained and updated more frequently than in a yearly publication. TAPR will also work with participating organizations to make this information available on TAPR's yearly CD-ROM as well as some future publication for local/regional groups to distribute.

The purpose of the Digital System Directory is not to manage, coordinate, or regulate the usage of digital systems, but to provide the most up-to-date and accurate listing of digital systems that can be provided. Neither is it a formal organization, but a mechanism to allow regional groups to provide and share information regarding digital systems.

The Digital System Directory is intended for use by individuals to further their enjoyment of the hobby, and by organizations to help plan and develop digital networks.

Regional/Local groups have already begun to participate in the process. These groups include TwinsLAN, Texas Packet Radio Society, Miami Valley FM Association, Ohio Area Repeater Council, Puget Sound AR TCP/IP Group, Northern California Packet Association, Northern Illinois Packet Radio Frequency Council, Indiana Digital Experimenters Association, Central Lakeshore Experimenter's Digital Organization, HogNet Packet Radio Association, YCCC Sysops Association and the Missouri Amateur Packet Radio Society. TAPR encourages other regional groups to support this project by contributing data from their respective areas.

For further information on the project and how to get involved, regional groups should check http://www.tapr.org/directory or send e-mail to Carl Estey at wa0cqg@tapr.org.--Jay Mabey, NU0X

DAVE COONS, WT8W, IS NEW GREAT LAKES VICE DIRECTOR

ARRL President Rod Stafford, KB6ZV, has appointed Dave Coons, WT8W, of New Carlisle, Ohio, as the new vice director of the Great Lakes Division. The appointment is effective immediately. Coons replaces John Thernes, W4ZN, who recently resigned to devote full time to graduate studies.

A former US Postal Service employee, Coons, 65, served for 12 years as postmaster in Miamisburg, Ohio, before retiring in 1989. During his stint in the US Navy in the late 1940s and early 1950s, he taught CW aboard ship. He's been a ham and a League member since 1963. "It's been a great hobby throughout all these years," said Coons, adding that he was "pleased and honored to be asked" to serve as a vice director.

Coons is deeply involved in ham radio activities. He's served as a volunteer examiner since 1989, is a past president (two years), vice president and secretary of the Dayton Amateur Radio Association (DARA) and has taught for the past 16 sessions at HANDI-HAM's Camp Courage. This year at the Dayton Hamvention, he'll chair the communication group. He enjoys CW, is a sysop for a packet node and participates in several HF nets.

Coons said his wife, Rita, supports and encourages his involvement in ham radio. He said he looks upon his appointment as vice director as "a great opportunity" to expand on that involvement.

Dave Coons' address is 932 Hedwick St, New Carlisle, OH 45344; telephone 937-849-0604); e-mail WT8W@arrl.org.

TEN-MINUTE RULE DROPPED FOR ARRL INTERNATIONAL DX CONTEST

Starting next year with the 1998 ARRL International DX Contest, multi-op stations will no longer have to remain on a band for at least 10 minutes after commencing operation on that band. The ARRL Contest Advisory Committee and the ARRL Awards Committee have approved changing the rules to allow six band changes per hour instead. In effect, the revised rule does not allow more changes in an hour than the present rule, but it does allow a station to quit an unproductive band after a single contact. Remember: the 10-minute rule remains in effect for this year's ARRL International DX Contest.

Effective this year, DXpedition scores are being added to the aggregate competition totals for active affiliated clubs in the ARRL DX Contest. The present rules require that single guest operators and the station licensee must be members of the same club. This rule has been waived for DXpeditions only. At least two-thirds of the operators in a multi-operator entry must be members of the same club for the score to count for that club.

FCC UPHOLDS FINE FOR VIOLATING AMATEUR RULES

The FCC has upheld a $6000 fine in the malicious interference case of Timothy Harold Hoffman of Phoenix, Arizona. The FCC cited Hoffman last spring for transmitting on ham radio frequencies without a valid license, failing to allow the FCC to inspect his radio station, willfully and maliciously interfering with licensed operations, and making one-way transmissions of material "to amuse or entertain." The FCC fined Hoffman last August after Phoenix repeater users reported being plagued for years by malicious interference by someone posing as a ham and expropriating call signs to use on the air (an FCC public notice erroneously identified Hoffman as an "Amateur Radio operator").

The Arizona Repeater Association's local interference committee helped to track down and identify Hoffman, notified the FCC, and continued to document his activities (see The ARRL Letter, Vol 15, No 9, Sep 13, 1996). Hoffman eventually admitted responsibility for the violations. But, when the FCC at first failed to take meaningful action, the association wrote to the White House and members of Congress. Subsequently, the FCC fined Hoffman, and he admitted responsibility for the violations. In October, he sought a reduction or elimination of the forfeiture saying he could not afford to pay because of child support payments, tax liens and a garnishment. But, the FCC said Hoffman "failed to adequately document his claim of inability to pay."--FCC

FCC TURNS DOWN MORE PETITIONS FROM EARLY FILERS

As it already did in a similar case, the FCC recently turned down Petitions for Reconsideration from three hams asking the FCC to reinstate their vanity call sign applications. The applications had been dismissed because they arrived prior to the opening of Gate 2 on September 23. The applicants' paperwork arrived at the FCC's fiscal agent, Mellon Bank in Pittsburgh, Pennsylvania, on September 20. In November, the FCC dismissed nine other similar petitions for reconsideration.

In its Memorandum Opinion and Order, released December 19, 1996, the FCC said it was not its fault that the applications arrived early and that the petitioners "did not show any error or culpability on the part of the Commission or Mellon's Lockbox Shift Supervisor."

The Commission pointed out that nearly 4200 hams successfully filed first-day Gate 2 applications that were delivered by various means and arrived on time.--FCC

DIGITAL JOURNAL, QRT

Digital Journal (formerly RTTY Journal) will cease publication with its January 1997 issue. The move to shut down the 45-year-old publication came shortly after the magazine's publisher, the International Digital Radio Association (IDRA), announced that Digital Journal would switch from monthly to bimonthly publication.

On his Web page, the magazine's editor, Jim Mortenson, N2HOS, cited a combination of flagging advertiser support and "a decline in the number of members willing to pay for hard copy of what they felt was available for no cost on the Internet."

Mortenson said that the phone and fax numbers at IDRA headquarters will no longer be in service. All correspondence goes to the IDRA at Box 2550, Goldenrod, FL 32733.

SOLAR REPORT: BACK IN THE DOLDRUMS

Solar seer Tad Cook, KT7H, in soggy Seattle, Washington (where the sun has been absent of late), reports: Solar activity is down over the past couple of weeks, as we settle back into conditions consistent with the bottom of the solar cycle. This comes in the wake of the recent, probably final upsurge in activity from the dying Cycle 22.

Looking at the long term, recent data show that sunspot numbers probably bottomed out around June or July of last year, but should return to late-1994 levels around June of this year. Some projections show that by August, sunspot numbers could be about three times what they were during the same month a year earlier, and by December about four times the average for December, 1996.

For the ARRL RTTY Roundup this weekend, look for slightly rising solar flux to the mid-70s, with a possible small bump in geomagnetic activity coming Monday, January 6. Based on the 27-day solar rotation, the flux is expected to rise to around the mid-80s by January 14, then drop below 80 a few days later, bottoming out in the low-70s from January 17 through the end of the month.

Recently 15 meters has seen some improvement, although a lot of the observed propagation is north-south, also referred to as transequatorial. Look for openings on 17 through 10 meters during daylight hours, and good conditions on 20 meters. Look for conditions to be best on 20 after sunrise and again before sunset. Forty meters is still a good bet for long and medium distance propagation, and--given the continued low solar activity--look for openings on 80 and 160 meters during the long hours of darkness.

Recently we have been unable to get solar flux numbers resolved to a tenth of a point. This should change soon. Sunspot numbers for December 19 through 25 were 23, 13, 28, 26, 24, 0 and 0, respectively, with a mean of 16.3. The 10.7-cm flux was 87.4, 83, 83.7, 81.5, 79.5, 79 and 77, respectively, with a mean of 81.6. The Planetary A indices for the same period were 2, 2, 4, 6, 10, 3, and 6, respectively, with a mean of 4.7. Sunspot numbers for December 26 through January 1 were 0 every day, which is a mean of 0. The 10.7-cm flux was 76, 75, 74, 74, 73, 72 and 72, respectively, with a mean of 73.7. The Planetary A indices for the same period were 3, 1, 4, 3, 8, 4, and 2,

respectively, with a mean of 3.6.

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

Please contact the Courage HANDI-HAM System at: Courage Center, HANDI-HAM System, 3915 Golden Valley Rd, Golden Valley, MN 55422; tel 612-520-0515; fax 612-520-0577; e-mail handiham@mtn.org. Visit the HANDI-HAM World at http://www.mtn.org/handiham.--Patrick Tice, WA0TDA

TWO HAMS DIE IN NEW YORK PLANE CRASH

Hudson Division hams are grieving the loss of two fellow amateurs from Long Island, New York, who died in the crash of a small plane December 12, 1996, near Bohemia, New York. Dead are the plane's pilot, Charles Kahn, W2PR, of St James, New York, and Ronald Katz, W2VK, of Stony Brook, New York. Katz, formerly WB2DVK, had recently received W2VK through the vanity call sign program.

Their twin-engine Cessna crashed on approach to MacArthur Airport in Suffolk County, New York, in a deserted section of Connetquot River State Park. A third passenger, Kenneth Summit, also died in the crash. All three, in their 50s, were employees of US Dynamics Corp of Amityville, which Kahn owned. They were returning from a business trip to Georgia when the aircraft went down. The cause of the crash is still under investigation.--The Hudson Loop/Steve Dworkin, N2MDQ

THOMAS D. GILES III, K4GVV, SK

The amateur community in the Panama City, Florida, area is mourning the loss of Tom Giles, K4GVV, who died November 7. He was 77. Giles, a member of the ARRL and QCWA, participated in numerous traffic nets. Although physically handicapped from childhood, Giles was an active radio amateur and had worked as a medical and health care facility administrator. A friend, Mike Adams,

N3JW, says Giles "leaves a legacy of dozens of individuals who were influenced to obtain their licenses." He said Giles sponsored an electronics scholarship at Haney Technical Center in Panama City to help students in need, and donated time and equipment to the school over the years. Tom Giles' survivors include his wife, Rosina, WA4QNL; daughter, Lucie Giles, WA4PGD; and son, Thomas Giles IV, N5CUZ.

HOPE CURRIER, FORMER 73 MANAGING EDITOR, SK

The former managing editor of 73 magazine, Hope Currier, died on Christmas eve at her home in New Hampshire. She was a 1973 graduate of Brandeis University and was believed to be in her mid-40s. Her one-time supervisor, David Cassidy, N1GPH, provided some insight: "In her office, she kept an extra chair which she labeled 'The Therapy Chair.' I cannot count the number of times I used Hope's 'Therapy Chair' to rant and rave about something, with Hope listening patiently and offering good counsel. Those of us who knew her will miss her very much, and the world is a lesser place without her in it."

In Brief:

* Young hams up: The FCC reports 2638 new hams during November 1996. There were 306 more new licensees age 21 and younger in November than during October.

* ZIP Code confusion: Some hams filing vanity call sign applications have been using the incorrect ZIP Code to send applications or payments. If you're filing a paper Form 610V and enclosing payment, the correct ZIP Code is 15251-5924. Electronic (on-line) filers send their payments with Form 159 by mail using 15251-5994.--Bart Jahnke, W9JJ

* AMSAT-Canada supports ARISS: AMSAT-Canada has endorsed the concept of establishing Amateur Radio on the International Space Station. AMSAT-Canada applauded approval by the Radio Amateurs of Canada (RAC) Board of Directors of a memorandum of understanding to establish a permanent Amateur Radio presence aboard the International Space Station--to be known as ARISS (see The ARRL Letter, November 29, 1996). The memorandum of understanding was hammered out last November by an multinational group.--Jeff Milne, VE3EFF

* Club insurance--the real deal: We recently reported that Albert H. Wohlers & Co of Park Ridge, Illinois--which administers the ARRL ham radio and club liability insurance plan--has raised the minimum premium for the ARRL Club Liability Insurance to $325 per year starting this year. While this represents an increase for most clubs, it will be a decrease for others--a fact our report did not make clear. It all depends on the state in which the club is located. According to information supplied by Wohlers, the minimum premium will go down in six states (the biggest drop was in Virginia, where the minimum had been $366). For more information, contact Wohlers at 800-323-2106; fax 847-803-4649; e-mail cusv@ahw.com.

* IARU Grows: Five new members, all in Region 1, joined the International Amateur Radio Union during 1996. New member-societies for Uganda and Mali were announced in April 1996 QST; joining them later in the year were the Tanzania Amateur Radio Club, the Association Radio Amateurs of Moldova, and the Tajik Amateur Radio League. This brings to 151 the number of countries and separate territories that are represented in the IARU.

* Update on Sister: Patrick Tice, WA0TDA, at HANDI-HAM, reports that Sister Alverna O'Laughlin, WA0SGJ, of HANDI-HAMS--injured in an auto accident last May--spent Christmas at her motherhouse, Assisi Heights. "I visited Sister there and she was in fine spirits, though her recovery has been much slower than anticipated," Tice said. Sister Alverna has been putting in a few hours of work at HANDI-HAMS each morning. Meanwhile, HANDI-HAMS' Maureen Pranghofer, KF0I--herself injured in an auto accident last June along with her husband, Paul--continues her recovery. Maureen had replaced Sister Alverna at HANDI-HAMS following her accident. Tice reports the Pranghofers both are doing much better. "Paul is back at work as a programmer at Courage Center, and Maureen is a resident in the Courage Center Residence program," he said. "She does manage to get up to the HQ station, W0ZSW, and operate our brand-new TS-870!"

* K1ART to Cushcraft: Art Hambleton, K1ART (ex-K1LL), is Cushcraft's first amateur product manager. He'll be responsible for product management, marketing, sales and tech support for Cushcraft's Amateur Radio product line. He previously served as design engineer for Amateur Radio antennas at the Manchester, New Hampshire, firm. A ham for 22 years, Hambleton has extensive experience as an RF design engineer.

* WT0N recognized: AMSAT News Service Bulletin editor BJ Arts, WT0N, of Hibbing, Minnesota, has been recognized with a plaque from AMSAT-NA for his work on the AMSAT news bulletins.

* Radio Canada International, QRT: Radio Canada International (RCI) will shut down at the end of March after efforts failed to raise money to keep the international broadcasting operation afloat. RCI had received a reprieve last spring, but plans fell through to provide continued funding. Press reports in Canada said the federally funded CBC and the government were unable to come up with the $16 million needed to keep RCI on the air.

I first heard about "eyeball" QSOs in the mid 60s. Guess we been down
for a long time. :-)

>"The name here is..." (as opposed to the name over there...)

Ditto.

>"N1KR♯, ya got ya ears on?"

Kind of reminds me of my Novice "accent" when I was a tad. The QTH was
always "MANCHESTER dahdahdididahdah (comma for codeless) CONN
didahdidah MANCHESTER dahdahdididahdah (comma for codeless) CONN
didahdidah" etc.

We do have a large influx of new hams from the ranks of CB operators. If
they bring a few "isms" with them and enjoy them, that is fine with me.
The "QTH", "handle" "rig" "DX" and other "isms" that we enjoy were once
new and I bet some of them were subject to criticism, too.

I have heard some things I am offended by on the air (14.313 is one). I
prefer to concentrate on them because they really matter to Amateur
Radio. If some fellow says "destinated," it really doesn't seem to
matter that much. Like the term "groovy," it will probably pass. (Then
again, "bummer" seems here to stay. :-)).

Yeah, but you get a whole lot more functionality from the cellphone
if your intent is merely that of the cellphone user. Besides those
entering amateur radio merely to find a shadow of cellphone functionality
also tend to be wary of buying used equipment, and are more likely to
buy a $300-$400 new radio from an 800 number dealer than to buy a
drab but functional unit second hand from some stranger in a fleamarket.

MOTOROLA
MICROPROCESSOR
DEVELOPMENT
SYSTEMS FOR SALE

We have several microprocessor development systems available for
Motorola 68HC05 and 68HC11. They are as follows:

1. Motorola CDS8-Emulation Sytem - For family M68HC05
microprocessors. Emulator, three programming modules,
software, manuals, emulation cables. Cost approximately
$5000. Price $1000.

2. Motorola M68HC705KICS K-Series In-Circuit Emulator -
For 68HC05 family microprocessors. Emulator,
programming module, software, manuals, emulation cable.
Cost approximately $750. Price $250.

3. Motorola M68HC11EVB Evaluation board - For 68HC11
up. Price $50.

4. Byte Craft C Compiler for M68HC05 family. License cost
$800. Have the latest version 4.10B and manuals. Will transfer
the license to you for $600.

Thanks for your interest. Please respond to:

>:-)

Yeah, but Ed, ARRL membership as a percentage of licensees is also at an all time low (if we ignore the immediate post-68 period). The amateur population is growing faster than ARRL membership. That isn't a good sign for the ARRL. In fact it should be a cause for grave concern. The average age of the amateur population as a whole has declined about 7 years since 1991 (which is very good news for the long term health of the service). The ARRL doesn't release a statistic for the average age of ARRL members, but I'd be willing to bet that it is higher than that of the amateur population as a whole. That's not a good long term sign for the ARRL either.

Of course the ARRL can't please everyone, but it should be cause for concern that the ARRL can't even claim a simple majority of current licensees as members. We know that some amateurs are inactive, some terminally inactive, IE dead, but ARRL membership numbers are so low compared to total amateur numbers that even that thought isn't much of a comfort. For a body which claims to speak for US amateur radio, not being able to even claim a simple majority of them as members has got to be embarrassing.

How about opposition to TAPR's SS STA? Or how about supporting
draconian limits on HF autoforwarding? I could go on, but those
two recent examples should be sufficient to illustrate the point.

SB SPCL ARL ARLX001
ARLX001 Heard Island DXpedition departure delayed

Heard Island DXpedition departure delayed

A strike in France has delayed the departure of the Heard Island
(VK0IR) DXpedition team from Reunion Island. The team had been
ready to set sail January 3, 1997. Instead, the team now will leave
January 5 and head directly to Heard Island without making a planned
stop at Crozet Island. John Devoldere, ON4UN, reports that the
French Regie Maritime, the semi-official agency that manages all
ferries in France, is going on strike for two days starting today;
the crew of the Marion Dufresne, the expedition vessel, is going on
strike as a sign of solidarity with their brethren in France.

The Heard Island DXpedition team has been active as TO0R from
Reunion Island for much of this week, mostly on 160 meters at 1826.5
kHz. The group expects to land on Heard Island on January 12 at the
latest and leave the island at month's end. On the sail back to
Reunion Island, the team will stop at Kerguelen Island ''for about
one day,'' Devoldere said, adding that ''the chances to operate on
Kerguelen are minimal due to the limited time available.''

Those interested in having a blow-by-blow account of the DXpedition
can send a ''subscribe'' message (leave subject line blank) to
heard-request (at) ve7tcp.ampr.org.

I think that the ARRL did amateurs a *disservice* by postponing this
important safety regulation. And I think the reasons given for the
postponement are very flimsy. And I agree with the Maniac that the
real world effect of the regulation is mostly on high power operators,
most of whom are not VHF+ operators (EME and VHF contesters, who are
an almost vanishingly small subset of VHF+ operators, excepted).

>>Dave, the ARRL was constantly on record as OPPOSING any type of codeless

The New Ham Companion is an interesting case study of the psychology
of the ARRL with regard to Techs. It is now 6 years after the creation
of the code test free Tech, approximately 20% of all amateurs are now
in that class, and the majority of them can no longer be considered
newcomers, yet the ARRL persists in viewing them that way. It is no
wonder that CQ VHF has become an almost immediate success. It addresses

this segment of the amateur population with a modicum of respect for
their intelligence.

Personally, I found the page unexpectedly funny and a nice change of pace.
I've been reading Burt's caustic bulletins on packet, and was expecting
something REALLY TWISTED on the Internet.

After reading Burt's home page, I'm beginning to think he's simply
'trolling' with his inflamatory (sp) packet bulls.

Your anecdotal relating of your personal situation is not helpful, nor
is it indicative of the true problem, which is severe. Many, many HF
operators are victimized by telephone RFI. This is a situation where
either the local phone lines are poorly filtered by the utility, or,
more commonly, where the households surrounding the ham use improperly
shielded telephone instruments. The problem can be a severe one.

It is a widespread problem as well. In fact, so widespread that a few
years ago the FCC actually got out in the field and did some studies
about the problem. About the only situation I can remember where the
FCC, with its near-total disinterest in amateur radio, actually did
anything related to our hobby.

Legally, it is almost never the ham's problem. But in reality, it
always is. Few of us have the stomach to operate if we know that each
time we do we are pissing off our neighbors. The real effect of this
problem is that it keeps many of us off the air, or only on the air at
late evenings, or early mornings.
>
> The thing that you're using to write this message is what's killing ham radio,
> not the code requirement.

My poor little 4 year old Thinkpad? Surely not. :)
One of the reasons that young people are using the internet instead of
ham radio is that ham radio has what is perceived as stupid entry
requirements. The Internet actually has tougher entry requirements than
amateur radio, if you look at the level of expertise it takes for some
of these kids to cobble together an internet setup. A lot of these kids
have computer skills that border or exceed professional levels. So much
for the crap about the younger generation not being willing to work.
One of the reasons that employers often fear hiring older workers is
that they have the (not completely deserved) reputation of not having,
or being willing to acquire, computer skills.
>
> I still use my CB radio and find it just as enjoyable as ham radio. While the

That's your opinion, and you're entitled to it. However, in my opinion,
and that of many others, CB is a cesspool of crummy operating habits,

and outright illegal activity that we don't want to see transported to
amateur radio, which by and large is a law-abiding and courteous hobby.

*** RICHMOND FROSTFEST ***
AMATEUR RADIO AND COMPUTER FLEA MARKET
SUNDAY, JANUARY 19, 1997
THE SHOWPLACE, 3000 MECHANICSVILLE TURNPIKE, RICHMOND, VA
HOURS: 8:30 A.M. - 3:30 P.M.

The 20th Annual Richmond Frostfest Hamfest and Computer Show will be held on Sunday, January 19th, 1997, at The Showplace, 3000 Mechanicsville Turnpike (Route 360), in Richmond, Virginia. This is near the intersection of Interstate 64 and Route 360.

The building has over 60,000 square feet of floor space, and an large free parking area out front. Doors will be open from 8:30 a.m. to 3:30 p.m. Admission: $5.00 (age 12 and under free).

This is Central Virginia's largest electronic flea market. Over 140 vendors covering 425+ table areas. Table space is already sold out, but any available space (from cancellations, etc.) will be sold on a first-come basis starting at 6 a.m. the morning of the show.

Talk-in for amateurs will be provided Sunday morning (until noon) on the Richmond 146.88 repeater.

The Chesterfield W5YI exam team will be giving amateur radio exams at 9 a.m. If you are interested in taking an exam at the hamfest, you must pre-register (i.e. no walk-ins will be allowed). Pre-register for exams by calling 804-717-2436 and enter voice mailbox 9#.

291. Awards issued by the American Radio Club International (ARCI)

Hi all!

Ballots will be arriving in the mail soon. After receiving an advertisement from Bob Adler <NZ2T> our current Section Manager, I felt I should post some questions you might like to ask him about his list he is plugging himself with.

*** 1. What has this West Gulf Task Group done that demonstrates it's existance was either desired, necessary or successful? 2. What has the Texas Speaker's Association done that clubs themselves felt
was either needed or desired? 3. How many have attended college with the benefit of the KB5BNU Memorial Schollarship? 4. Concerning the schollarship,
what part did Bill Revis KF5BL, now running for SM, and George Lyons, K5MXQ,
(both of whom apparently "FIRED") and Valli Hosky, N8QVT play in bringing the schollarship about? 5. How many times has he seen fit to change the standards of appointees to change, just because they didn't meet his original?
7. Why were his standards necessary? 8. Doesn't ARRL already have standards
in place for all appointees? 9. Can anything possibly be in the best interests
of the league if it doesn't meet with his personal approval? 10. How many and why were certain donations to the schollarship rejected? ***

Let's get someone in this position who we can count on to do things that benifit all of us in the section and not someone who wants to run it the way they think it needs to be ran.
ELECT DAVID ALLEN <WD8LDY>

FOR

NORTH TEXAS ARRL SECTION MANAGER!!

296. Antenna/Transmit Restriction - Info/Experiences Needed!

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-04 00:00:00 UTC
From: James Messer <jtmesser@sprynet.com>
Message-ID: <01bbfa71$0d1132e0$de2745a1@JamesM.ngc.com>
Source record: 207869

The neighborhood in which I live has a series of CC&Rs (covenants, conditions and restrictions), which prohibit transmission over 'short wave frequencies'. There are also the usual restrictions on antennas without the permission of the committee.

I'm planning to approach the board to ask for a rule change to allow transmissions. I need some input from others who have gone through this process, and the results of their work (good _or_ bad).

I'm not asking for comments on CC&Rs (especially since I _like_ CC&Rs). I also don't want this to degrade into deed restriction bashing . I'm really hoping to gather some ammunition and experiences that I can use to help change what I feel is an unfair restriction.

My restriction change request is helped by a SAREX contact by Silver Lakes Middle School just a few days ago. This school is across the street from my neighborhood, and it got some great press. I hoping to ride the wave.

I've already requested a package from the ARRL, and it's in the mail. Any other ideas? Your help is greatly appreciated. Reply by e-mail or to the newsgroup. I'll post a summary at the end of this journey.

I don't think it's too big a step, but out of deference to others feelings
along that line I proposed a maximum of two classes (entry/normal,
apprentice/journyman, whatever/whatever+) ...

>

This is an *excellent* idea ... I particularly like the metric for the
power limit ...
it's "modeless" or "mode-neutral" and that's good.

>
> I wouldn't go the way Canada has chosen to go and prohibit the

> while experimenting with circuits.

I agree that no prohibition on using or building homebrew gear should be
enacted. However, I think the even the "apprentice/beginner" license class
should have demonstrated sufficient knowledge of theory, construction
practice/techniques, safety, etc. to be allowed to build without the 12VDC
limit suggested.

Mike,

It would ONLY be a "relevant test" if all hams were *required* to
communicate in CW with that 40% of the ham population that (occasionally)
uses CW ... we are not.

And that 40% number keeps being bandied about as if it was 40% of the ham
population that uses CW *exclusively* ... it's NOT ... only 40% of hams
EVER use CW.

From: an371910@anon.penet.fi
Message-ID: <5amb9v$5ii@tracy.protocom.com>
Source record: 207873

Hi, thanks for reading this. My old Hammarlund SP600 has a couple of problems and I'm seeking advice.

1. The dial mechanism is slipping. Some of the slippage is between the flywheel and the intermediate pully an some is between the intermediate pully and the bandspread dial. I have cleaned the mechanism and increased the spring pressure, but there is still slippage. Any ideas?

2. The same radio has developed some drift. The drift is in the HF OSC, because it even drifts on the two lowest bands. Have also done freq meas on that osc and it constantly drifts. Several 6C4 subs have been tried and the 6BE6 that is driven from that 6C4 has also been subbed. No change. The plate supply to the 6C4 is well regulated and the DC voltage doesn't drift. The tuning switch contacts have been cleaned. No luck. Any ideas?

Does anyone know how I can contact the Hammarlund man?

Tnx!!!!

reference.

Actually the FCC has NO regulatory authority outside of *US Territorial
limits.*
That would imply that 12 miles+ offshore, they cannot enforce anything.

When I was operating in Mexico as XE2/WA6VSE (that was my assigned MEXICAN
call, *not* using a US call as "portable") I got a pink slip from the FCC
for "tech operating in 15m phone band ... I sent them a letter politely
telling them to go to hell because I wasn't using a US license and wasn't
operating in US territory, so no infraction of FCC rules could possibly
have taken place.

That was the last I heard of the matter ... the FCC has NO authority
beyond the US territory.

On January 11th and 12th, 1997, the Lake Monroe Amateur Radio Society (LMARS) will be honoring all the teachers who have taught students in schools to be Amateur Radio Operators and also those who have instructed people outside of school.

We will need operators to participate on all frequencies by giving at least 2 hours of your time. You can use your own shack forcommunications. Anyone can work any of the stations.

Dates: January 11th and 12th

Times: 8 A.M. Saturday to 5 P.M. Sunday

Frequencies: 3.850, 7.240, 21.350, and all 2 meter nets in which we are involved.

The following phrase can be used by all who participate in this event:

"This is N4EH Special Events Station, honoring classroom Teachers and Amateur Radio Operators who teach ham radio to students and the public. For a Certificate commemorating the event, send a SASE to LMARS, P.O. Box 151353, Altamonte Springs, Fl 32715."

For more info visit the LMARS Events page at
http://www.cycat.com/users/lmars/events.htm
or e-mail nick@cycat.com and request more information.

73's,

Nick KF4BYA

While daydreaming, Joe KA0YOS wrote: "Radio Free New York. A ship of international registry operating in international waters on a freq'y causing no QRM was boarded and shut down by the FCC. Just a little history."

The FCC has no vessels; law enforcement at sea requires the assistance of the US Coast Guard, under the command of Commander, Atlantic Area, who would have to receive his order to dispatch such a ship from the Commandant of the USCG. Also, because the FCC doesn't have law enforcement powers, the US Marshall would have had to approve the order for Deputy Marshalls to accompany FCC agents to carry out such a mission.

Now, the USCG cannot stop and board a foreign registered vessel without consent of the country of registry, *unless* the vessel is in US waters. If the ship was outside US waters, then the State Department would also have been involved in the operation.

Thus, the "facts" in your little fairy tale are a bit inaccurate.

Also, unless you have some magic powers, how can you state that no QRM was being caused?

Pirate broadcasters should be fed to the sharks.

Have a nice day, Joe!

>'later'.

Well that explains your "Miracle Rig" test comments. They would
appear to apply to you. You're an 800 number operator, a consumer who
insists on getting your "reliable, tested, commercial equipment" out
of a sealed factory carton. The radio you "threw on the pile" apparently
wasn't even DOA since you say you used it for a week. I wouldn't call
that "very broken".

What I'd consider very broken is a radio that had been run over,
several times, by an oil field service truck before you got it. I've
resurrected Motorola 5Vs in that condition, and I'd have to say that
they were very broken. But any radio that works well enough to use
isn't very broken. Sounds like the radio has some minor problems,
the sort of thing you should expect from "reliable, tested, commercial
equipment" after it has been used for a while and shipped half way

around the world. But it is understandable that an 800 number operator
with a "Miracle Rig" license would "throw it on the pile". Those
with a bit more radio knowledge would just fix the minor problems
and enjoy operating the bargain radio.

>What is keeping young people out of ham radio is technology. Ham radio isn't
>high tech any more. And if you change ham radio into Carl's Digital
>Experimentaion Service, it isn't ham radio any more. Ham radio is just that,
>ham RADIO. Not ham COMPUTER, or ham INTERNET. Most kids would rather sit in

>the other side of the world on a radio when you and I started, but most 12 year
>olds already know about the WWW (World Wide Wait) and the internet, so ham radio
>is not awe inspiring to them, it's dumb.

Well, it is only dumb the way you do it. Advanced amateur digital is
high tech, though not necessarily high cost. It is an exciting area for
experimentation. And it most certainly is amateur radio in its finest
tradition of technical advancement. It just isn't the 800 number kind
of user activity you practice.

>I think, because of the mentality of society in the U.S. today, there will
>someday be a no code HF license. And it will give us the false impression that
>it swelled the ranks of ham radio because of the numbers of people who will run

>move on and find out what is involved and the cost of what is involved, stage
>one will be the end. Because they have no real interest to drive them any
>farther.

800 number thinking. Most of the exciting stuff being done with radio is
cheap. In fact it is cheaper today than ever before. For example, my I/Q
DSP receiver cost about $100 to assemble, and puts the radios you get in
sealed factory cartons to shame in terms of handling arbitrary modulation
forms and in weak signal HF performance. While this isn't a breakthrough
concept, it represents a major breakthrough in practice because the price
of DSP has dropped enough, and performance has improved enough, to make it
practical for amateurs to operate beyond the confines of commercial equipment
for a cost that's a mere pittance compared to what the 800 number amateur
pays. And the antenna in the tree will often suffice for this because we
can intelligently use the power of coding instead of the brute force of
amplifiers and beams.

There is lots of excitment in amateur radio today, if you care about
radio technology, IE advanced modulation and coding methods, ALE
techniques, computer control and enhancement of radio functions,
radio network topologies and routing, achieving excellent performance
near the gaussian noise floor, etc.

If you're just a radio *user*, however, there isn't much to be excited
about. There have been few advances in radio *usage*, other than in

digital networking and the rise of the repeater, over the past 50 years.
Just the same old games played the same old way.

>Regardless of what happens to the licensing structure, I think the HF part of
>ham radio will remain as we know it today. Those who are really interested and
>are willing and able to spend the bucks will continue to do what those who are
>there today are doing.

Of course those who are willing to substitute technical knowledge for
burnt plastic will be able to do things far beyond what those on HF
today are doing, if we can get some regulatory changes to allow it.
We could be using digital voice on HF today (in a SSB bandwidth)
which would allow us to run lower power and suffer less interference
than using SSB, except regulations don't allow it. We could be improving
HF packing density with SS today, effectively multiplying band capacity
several fold, but regulations don't allow it. We could be doing long
range point to point medium speed data via Piccolo-like techniques,
but regulations don't allow it. Etc.

The main hinderances to exciting new advancements on HF are outdated
regulatory restrictions, not monetary constraints. Almost all of the
radio technology we'd like to apply would cost less, require less power,
and tie up (on an exclusive basis) less spectrum than what is being done
today for the equivalent throughput.

We can nibble at the edges of the possible under today's restrictive
regulations, but given a more intelligent regulatory environment
which doesn't automatically assume narrower is better (sometimes it is,
often it isn't), we could soar to much greater heights. If we want to
put the radio back into amateur radio, we need to change those regulations.
Otherwise we are doomed to doing the same old things using the same old
inefficient methods we use now indefinitely into the future.

Very well said! I myself have been in Ham radio for just over three
years. Being a no code tech,
I have heard and read the dribble about the code and so much more about
no code tech bashing. My ticket
came in the mail after I transfered to Japan for a three year tour with
the US Navy. During those
years, I was not able to use my US call. I learned about operating
while in Japan. Not influenced
by local clubs or the ARRL. I learned that this hobby is just that...a
hobby. If I chose to be a
no code all my life, that's my call. If I decide that morse code should
not be a part of the test,
that's my call again. Let the Ham's decide what's on the test, not a
select few. No one asked me
if the code should stay or go. I'm just as much a part of Ham radio as
the next Ham. We need to
get away from the ARRL making the call for us. I am not a member
because that's my call. But
I still deserve to be heard.

Folks to me amateur radio w/o code is just another citizen band. I
don't use code but don't want amateur bands to turn into cb type bands.
The code is what keeps cb'ers on cb. I started out as a novice/then tech
when all tech's had to take the 5 wpm code test. Go listen to CB band
and you will hear alot of no coders.

Phil, thanks for posting this note and thanks again for your private mail response to my query giving more info on where to find this article in QST (May 1994, pages 54-59). One interpretation of the information in the article is that the K#$$ calls were never systematically issued by the FCC (or the N#$$ calls for that matter). Does anyone know if this is this a correct interpretation, implying that all 1x2 existing calls with a K or N prefix arose from the various "vanity" callsign selection opportunities over the years?

Wait until you try it out on Field Day!! What a timesaver!

I ordered the dip-meter adapter set (two plug-in coils) for the 259. Using an old B&W Grid Dip
Meter and the 259 as a GDM to check the traps of one of my old A3 tribanders, the B&W won
by a landslide as to sensitivity and utility. I think you REALLY have to get close to the object
device to get sufficient coupling to get a good reading on the 259.

Otherwise, I will not be without the 259 or whatever subsequent antenna analyzer I decide to
get should this one either crap out or get dropped from the tower (knock on wood!).

Yes, but they were just a memorization excersize too. You pretty
much knew that 5 questions were schematics from a total
of 12/14 possibilities. But the rest of the test was multiple
choice anyway.

We have the following CD-R media for sale.

Brand: Pioneer
Type: Printable Media (Surface is blank for printing or labels)
Size: 74 min (650 mb)
Price: 6.99
Minimum Order: 10

Brand: Pioneer
Type: Gold on Green
Size: 74 min (650 mb)
Price: 6.55
Minimum Order: 10

Brand: Maxell
Type: Gold on Gold
Size: 74 min (650 mb)
Price: 6.55
Minimum Order: 10

Brand: TDK
Type: Gold on Gold
Size: 74 min (650 mb)
Price: 6.55
Minimum Order: 10

Brand: Hewlett Packard
Type Gold on Gold
Size: 74 min (650 mb)
Price: 7.15
Minimum Order: 10
Lifetime Warranty

The Copy Cat Shop has all your CD duplication, replication, recorders,
software, and media needs.

If you have any questions or comments feel free to call.

Cordially,

-
Here is a summary of news items covered on edition #197 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 10-Jan:
-
1. FCC Upholds $6,000.00 Fine Against Arizona Ham Imposter
2. Commission Dismisses More Vanity Petitions for Reconsideration
3. League Says Hams Misfiling Electronic Vanity App Payments
4. Proposed Part 5 Rules Allow Experimental Use of Some Ham Bands
5. French Maritime Strike Delays Start of Heard Island DXpedition
6. "Digital Journal" (former "RTTY Journal") Closes after 45 Years
7. ARRL CAC Approves New Minimum Band Time Rules for '98 DX Test
8. Art Hambleton, K1ART, Takes New Position with Cushcraft
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. 16 Schools Selected for STS-83 SAREX Contacts This Spring
11. Special Event Station Calendar
12. "The RAIN Dial-up" from Chicago
13. Weekly Propagation Forecast
14. "Ancient Amateur Archives" with Bill Continelli, W2XOY
15. RAC Ratifies ARISS Agreement, Congratulated by AMSAT-Canada
16. "ARRL Letter" and Reuters Conflict on Fate of Canada's RCI SW
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Therese Cheney, N0YNQ, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
```

VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

hello from Jim in Atlanta. All previous points correct,I've got some
experience with those too. I have found that the 900 mhz that use
spreadspectrum encryption work real well. You can be on hf running a k
with no rfi. The range is great,has the same charecteristics as our band
close by. Can be monitored,but they have to work for it! In my opinion
worth the expense. Good Luck KD4CDB

I don't think so Rick. According to the article in QST, prior to
1968 there was no "vanity" callsigns for Amateur Extra class. I know
for a fact that my K#$$ was held by a ham in 1961, at least 7 years
before hams were first allowed to opt for a "vanity" call. The
article in QST was an excellent one overall, but somehow they missed
the boat on explaining the advent of the K#$$ series.

Even reliable, tested, commercial equipment goes awry from time to
time. At such times you need the skills to detect that there is a
problem, and know enough to, at the least, stop operating until it
can be solved. It is often not so obvious as a puff of the holy smoke
being emitted from the equipment. Often the faults are subtle to the
senses and you have to draw on your knowledge to even detect the
problem.

A recent example of this nature was chronicled in QST. A repeater
duplexer suddenly exhibited high VSWR. Exhaustive testing of the
duplexer, even to disassembling the cavities, found no problem.
The manufacturer of the duplexer was unable to offer a solution.
But using the minimal skills required of an amateur by the exams,
the solution was found. The repeater transmitter was outputting
large amounts of power on 137 MHz. Of course the duplexer was
showing a high VSWR, it was performing as designed. It was the
parasitic that had developed in the reliable, tested, commercial
PA which was at fault.

This is an example where the potential for interference to other
services was great, but thanks to the minimal skills required of
an amateur it was avoided. You don't have to be a homebrewer to
need electronic knowledge and skills. Being alert to unusual
operating behavior, and knowing what that may imply, is a part
of the skill set that every amateur requires.

Nodern equipment is reliable, and some of it even has self-test
and fault detection built in. But none of it is foolproof. It is

a truism that fault detection circuitry is as likely as any other
circuitry to fail or give a misleading indication. A knowledgeable
operator is still often needed to detect faults which could cause
serious harm if left unresolved.

I don't understand your complaint. Isn't it the purpose of a repeater
to act as a range extending device? By nature of its favored location,
it allows stations to easily maintain contact when simplex paths would
be difficult at best, virtually impossible at worst. As to your complaint
that they could use the telephone, that's true of virtually any amateur
contact. Certainly Dxers could just make a long distance call and save
themselves hours of frustration. Why don't they do that? Because obviously
it wouldn't be amateur radio if they used the telephone.

If they are monopolizing the repeater and not allowing opportunities
for others to use it, you may have a valid complaint. But if, as is
the typical case, the repeater would be sitting idle if they weren't
using it, then there is no cause for complaint.

>: I think we are dealing with a different mindset than ever before in ham

>: to the public.
>
>: Any thoughts???
>
>Good points; I'm sure you'll hear from several repeater owners on this
>issue.

As a repeater owner, I encourage activity on the repeater. I especially encourage long technical discussions, but any subject fit to go on the air is acceptable. I do discourage the inane hello-goodbye contentless type of contact. And I certainly discourage stifling fixed rotation roundtable activities. I encourage people using the repeater to have something interesting to say. I encourage animated discussion. And I expect anyone with something to say to have the gumption to chime in and say it. I don't try to dictate any of that, of course, but I try to lead them into that sort of action by example.

The repeater serves as a watering hole, a gathering place for people of like interests who may be spread over a large geographic area. The range extension it provides allows them to easily stay in contact with their fellows, and the common frequency serves as a convienent meeting place. That's why it is there.

I don't care if they are operating from a fixed station or a mobile or on foot. That's irrelevant. What does matter is that they want to have contact with others of similar interests, and the repeater can serve to facilitate those contacts.

>memmorizing a bunch of questions. These guys dont know there ass from a
>hole in the ground when it comes to electronics, they just a license as
>easily as they can get it. Its obvious. The no code hams have flooded the
>repeaters and now are stuck there. Get rid of the code so they can move on
>with little effort. Hell lets have Walmart hand them out! Stop your damn
>whining. rogie!!

Lets see if I understand your complaint. It is that amateurs don't know
electronics, so they should be forced to memorize Morse Code. How is
that going to improve their electronics knowledge? It would seem that
requiring them to know electronics would be a more direct course to
solving the problem you are whining about.

343. longwire ant help

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: JALM65A@prodigy.com
Message-ID: <5apd8g$nuq@usenetw1.news.prodigy.com>
Source record: 207712

hello...i have a question about long-wire antennas.

i live in rental property and have chosen for various reasons to try a longwire
to the only tree i have access to (i also have an indoor ant, not very satisfactory). i use the longwire to an MFJ longwire tuner to my icom. am actually able to make a few contacts on 20 meters. now...i want to extend the antenna in the house so i have easier access to my rig.

can i use the center conductor of coax (rg 59 or whatever) to extend the sixteen gague longwire inside? is there a mismatch, or would the center conductor of coax work? i want to reduct RF inside the house. if not, is there a long-wire balun that i could use? seems to me i should be able to use the center conductor of a fifteen foot or so piece of coax to connect to my random length long wire.

thanks for your help.

dejim, not qrp, but sounds like it.

The following is a QST

Two New York City hams are taken to court for alleged harassment of another radio amateur, a mistake by the FCC causes a call sign foul-up and an update on Gate 2 of the Vanity cal sign program. These stories and more on Newsline report number 1012 coming your way right now:

(*****

NYC ARRL APPOINTEE GOES TO COURT

Welcome to 1997 and we immediately head east to New York City. That's where an ARRL Official Observer has charged two men with harassment and has hauled them into court. The two people charged are also hams. Here's the story.

Barry Schwartz, N2SHP, is an ARRL Official Observer in the New York City and Long Island Section. He also serves as a local Emergency Coordinator and as the City Deputy Radio Officer for New York City RACES.

Schwartz identifies Michael Wlazlo, N2SVT, and Anthony Barben, Jr., N2WNF as the two men who have allegedly been harassing him. He claims that both began making annoying phone calls to his home in mid-July. This after Schwartz and several other Official Observers issued Wlazlo and Barben Official Observer Advisory Notices.

But it did not end there. Schwartz says that the harassment escalated to include the ordering and sending of services and merchandise to his home. He also believes that the pair may have made a phone call to the New York State Child Abuse Registry. A phone call that falsely accused him of abusing his own child.

So, Schwartz went the legal route. As a result, Wlazlo and Barben were ordered to appear in Queens County New York Criminal Court several times since August. The court also issued restraining orders in the case.

But even that did not solve the problem. Schwartz claims that both have violated the Orders. As a result Wlazlo was arrested during a court appearance last September. Schwartz also says that Barben was again in violation on November 21st. This, after being granted a six month "probationary" period on November 15th. Because of this alleged violation, Schwartz says that an arrest and charge of Contempt of Court are pending.

Wlazlo's latest court appearance took place on December 9th. There, the District Attorney Office offered a six month probation in a plea bargain that included an Order of Protection for the same period of time. Wlazlo refused the offer, but eventually did accept a six month probationary period.

But Schwartz says he knows its not over yet. He says that he will continue to do what is necessary to protect the welfare of his family.

At the same Schwartz wants send a clear message to all hams who try to intimidate others. A message that says such actions are intolerable. Even more so when such individuals stoop to the lowest of lows by involving a mans innocent wife and child in their child like game.

Stay tuned. There more to come on this one.

QUELLO PLANS TO EXIT FCC IN JUNE

On New Years Eve, FCC Commissioner James Quello announced that he plans to depart the agency in June. An aid to Quello says that he had been wavering on whether or not he would seek another term for some time.

The 83 year old former broadcaster, whose current five year term already has expired, has been with the FCC for 22 years. FCC General Counsel

William Kennard is considered the front runner to fill the Democratic seat on the five member commission when Quello steps down. The White House must make all nominations, which then must be approved by Congress.

PRO MITNICK HACKERS INVADE TOP SECRET COMPUTER

According to a posting on the W5YI Telecommunications News Page on the world wide web, a group of hackers calling themselves the Kevin Mitnick Liberation Front have successfully invaded the Los Alamos National Laboratory computer system.

The New Mexico based lab is where the United States did much of the research that lead to the development of the atomic bomb. While they were able to breach the security measures designed to keep them out, the hackers were not able to access any sensitive information or do any damage to the Los Alamos site.

But the hackers were able to use it to stage an attack on the San Diego Supercomputer Center. There, they destroyed electronic mail and other files. They also tried unsuccessfully to break into the computer of security expert Tsutomu Shimomura. Shimoura is the key figure in tracking down Mitnick.

The reason behind the attacks is still not clear. Kevin Mitnick is N6NHG and is the ham hacker who has a long record of infiltrating sensitive computer networks. He is currently being held in a federal detention facility awaiting trial on numerous computer related crimes. It's not known if the Kevin Mitnick Liberation Front is really a clandestine support group for the imprisoned ham or simply a bunch of hackers who have adopted his name.

GATE 2 VANITY UPDATE

Here is an update on the processing of Gate 2 Vanity call signs, courtesy of our friends at the ARRL Letter. The FCC reported on December 18th that it had processed vanity applications received through November. At that time it meant that the FCC was less than three weeks away from being completely caught up with its current application backlog.

However, a spokeswoman at the FCC office in Gettysburg, Pennsylvania, said she didn't expect the FCC to get to the applications received during December until after the first of the year. That means the processing facility is starting to work on them as this weeks newscast goes to air.

Gettysburg also says that some 640 applications were set aside for special handling. This includes those for which the FCC was unable to

grant any of the applicant's call sign choices. The agency also notes that some applicants failed to include their current call signs under Item 6 on the Form 610 V application, and this also can delay issuance of a new call sign.

(Via ARRL Letter)

(*****

LICENSE -- WHERES MY LICENSE

Imagine using your newly issued amateur radio callsign on the air, only to find out that someone else also has the same callsign! Of course, that's not supposed to happen. But it did, to at least a handful of newly licensed hams in the southeast U.S. The FCC blames the callsign snafu on computer problems.

The foul-ups started happening in mid-October. That's when the FCC issued the same callsign to several people who had just passed their license tests. Louise Williams, KF4MTE, of Newberry, South Carolina is a case in point. She was originally assigned KF4MTO October 23rd. But that same callsign wound up being issued seven days later to another woman in North Carolina. Two days after that, on November 2nd, KF4MTO was again assigned, this time to a woman in Tennessee. At least two other South Carolina hams had similar experiences.

An FCC spokesman says the Commission was having computer problems for about a week, just before Gate 2 vanity callsigns were issued. The spokesman says he has no idea how many licenses may have been issued to more than one person, he says it's possible that there might be more hams who are unaware that they are operating with a license holding the wrong callsign. But he says the Commission's database has been corrected so that there are no callsigns with more than one holder. In the case of more than one person getting the same callsign, the last person to be assigned the callsign got to keep it.

As for what caused the problem to begin with, the spokesman says efforts are underway to find out, and he hopes, to keep it from happening again.

An FCC spokesman says it appears that the problem of multiple people issued the same callsign is apparently limited to first time licensees.

(Via ARRL, others)

(*****

CELEBRATING A NEW CALL

On a more positive note, one of the Big Apples best known radio clubs has gotten a new call sign just in time to help celebrate the 25th anniversary of a great American institution. The Broadcast Employees Amateur Radio Society of New York, better known as the BEARS, have garnered the call sign W2ABC. This is significant in that the Bears are the official radio club of hams working for the American Broadcasting Company

and its affiliated stations.

According to Ray Hoesten, N1LZZ, the W2ABC call came just in time to take part in celebrating the 25th anniversary of Walt Disney World in Orlando, Florida. As part of the event, the Bears will operate W2ABC while a station at Disney World will sign W4D. A home base station is also taking part from Disneyland in Anaheim, California using the call of Archie Willis, W6LPJ.

(Via BEARS Newsletter)

INSURANCE RATES CLIMB

ARRL sponsored club insurance going up. Albert H. Wohlers & Co of Park Ridge, Illinois, which administers the ARRL ham radio and club liability insurance plan, has raised the minimum premium for the ARRL Club Liability Insurance to $325 per year.

Wohlers also administers the ARRL ham radio equipment insurance plan for individual stations. This plan covers all losses and the company says it's paid out $2.4 million on 2700 claims over the past five years. The majority of the claims resulting from lightning damage and theft.

(Via ARRL)

(*****

HOT RADIO

Reedsport, Oregon police have arrested the owner of a burned out radio station on suspicion of arson. According to the October 28th issue of the newspaper The Oregonian, the station owner was charged with first degree arson in the June 17 fire at a private residence and at the radio station studio location. Both were apparently housed in the same building.

The station had broadcast intermittently during the year before the fire, with a country western and community service format. Police arrested the owner after a Douglas County grand jury indicted her Thursday, October 24th.

(Via The Oregonian)

(*****

U.S. FOREST SERVICE SHUTS OFF FM STATION

Richard Zanni, KJ6RA reports that back on October 28th the United States Forestry Service shut down radio station KWHO in Weed, California. This, due to a dispute about their use permit. Zanni says that the station did not reappear on the air until November 3rd.

(Via KJ6RA)

NEW SUPERCOMPUTER

Intel has developed the world's fastest supercomputer for the Department of Energy that is capable of performing one trillion operations a second. The new super computer will be used at the government's Sandia National Laboratories to simulate the performance of nuclear weapons, replacing live tests of stockpiled weapons.

The machines high speed comes close to tripling the previous record achieved by Hitachi made in 1995. This, with a supercomputer capable of doing 368 billion operations a second. And the Intel supercomputer is unique in another way. All that computing power was built with off the shelf components. The same components that Intel supplies for the computer on your desk.

RDS COMING OF AGE?

Panasonic Corporation is set to introduce a line of next generation RDS alphanumeric pagers to test markets in 11 western states. RDS is a feature developed Axcess Global Communications Corporation permitting the new pagers access via the Internet.

(Via Panasonic/Axcess Global release)

(*****

AEA vs. AES

Also, in our get it wrong, get it last department it looks as if the ham radio packet networks have done it again. This time mixing up the initials of two companies, one of which who is leaving the ham radio marketplace.

As previously reported, that company is Advanced Electronic Applications of Lynwood, Washington. For years the company was better known as AEA.

But as has happened so many times before, some ham either misunderstood or simply typoed one letter on his keyboard. As a result AEA became AES. Soon messages were floating hither and yon that Amateur Electronic Supply, a company that uses the initials AES was going under. Needless to say that did not set well with the folks at Amateur Electronic Supply which plans to remain in business as long as there is ham radio equipment to sell.

So to clear things up once and for all, it is Advanced Electronic Applications Inc, AEA which is being sold. Amateur Electronic Supply, AES plans to be around to serve the ham radio community for a long, long time.

(Via industry sources.)

(*****

HAM FLOAT WINS IN TOURNAMENT OF ROSES PARADE

A float carrying a working Amateur Radio station has won a major award in the 1997 Tournament of Roses Parade. The Edison International float titled "150 Years of Lighting the Way" was awarded the Queens Trophy for its interest and originality.

On board this float were members of the Edison Amateur Radio Network. This is a Southern California ham radio club and they were operating an all band ham station using the callsign WB6UCD. The floats sponsor was Edison International which is the holding company for the Southern California Edison Company.

Another aside. If those of you with home satellite dishes watching the parade on Galaxy 6 Transponder 11 thought you heard a familiar voice, you did. What you were viewing was the international parade feed from a company called Videospec International seen world wide. The voice behind the pictures was that of this weeks Newsline anchor, Roy Neal, K6DUE.

MIAMI TROPICAL HAMBOREE

The 1997 convention season kicks off in Miami in about three and a half weeks. That's when hams from all over the nation take a break from frigid winter weather and head south to the Tropical Hamboree. As always the Hamboree will be held at the Dade County Youth Fair and Exposition Fairgrounds on Coral Way, not far from Miami International Airport.

And this years Hamboree will feature a panel discussion that you will not want to miss. A Saturday, February 1st special panel discussion dealing with international spectrum demands as they affect the future of Amateur Radio. The panel will be lead by ARRL President Rod Stafford, KB6ZV and featuring a number of ARRL and IARU officials who have attended meetings worldwide.

This years Tropical Hamboree takes place February 1st and 2nd. Again the location is the Dade County Youth Fair and Exposition Fairgrounds on Coral Way in Miami, Florida. If you are anywhere nearby, be sure to come and hear what the experts on international frequency demands have to say.

(Via Tropical Hamboree and ARRL)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W4/YV5DTA, N4AA & QRZ DX, W5IJU & ISLAND/DX News, N7KH, K7NPN, NL7TB, K8PYD, K8YSE, K9EL, CX5BW, F6AJA, G4BUE & DX News Sheet, OH2BUA, PA3GBQ, PB0ALB, VE1AL and ZS6EZ for the following DX information.

3Y, BOUVET. Several other DX publications report that Tony, WA4JQS, Director of Operations of the South Sandwich Island Antarctic DX Group, states the 1997/98 operation and paper work is going along very well. Permission had been received for a December 1997 landing date, but with the possible establishment of a CCAMLR (Convention of the Conservation of Antarctic Marine Lining Resources) ecosystem monitoring program being set up on the island and taking effect in October, 1997. Problems could arise just before departure time with permission to land. The South Sandwich Group has re-applied for a 1998 season landing date also, so that they would have time to work with any new requirements that the CCAMLR group should request. He also reports that there are many requests by the JA operators for them to postpone their landing until 1998, so that the 28 MHz band opening to JA would be greater. This was also a big factor in the new date request.

7O1A OFFICIAL RESULTS. The 7O1A operation recently conducted by Zorro, JH1AJT, and Franz, DJ9ZB, from Aden, Republic of Yemen, during December 15-23th, 1996, using only a TS-50, R5 (10/15/20) and wire dipoles (40/80), made 13140 QSOs with 105 countries. All QSOs were on SSB. The break down is as follows:

MHz No. of QSOs COMMENTS MHz No. of QSOs
--- ------------ -------- --- ------------
3.5 1078 JA: 240 14 3620
NA: 250 18 3635
EU: 588 21 1971
24 670
7 1926 JA: 500 28 240

NA: 600
EU: 826

9G, GHANA. Steve, PA3GBQ, will spend his 1997 holiday here from February 1st until March 8th. His callsign will be 9G5BQ. Also, he will take part in the ARRL CW contest maybe with a special callsign. This will be an all band event from on top of a mountain. Activity will be mostly during the night and morning hours on the low bands and WARC bands. He will also try to obtain a license on 160 meters. Steve may make a trip to TU-land during his holiday. All QSL cards via PA3GBQ.

9M8, EAST MALAYSIA. PB0ALB will be in Sarawak from April 19th to June 6th as 9M8CC. Activity will be on AMTOR/RTTY and SSB on 80-10 meters. Europe stations should look for him on 15 meters at 1100z, 20 meters at 1200 and 80 meters at 0000z. JA/USA stations should look for him somewhere between 0200-0600z for 15/20 meters and 1000z for 80 meters.

C6, BAHAMAS. The DXNS reports Rick, NE8Z, will be active January 13-20th as NE8Z/C6A from Treasure Key. Activity will be on CW/SSB. QSL via NE8Z or K8LJG.

CE, CHILE. Paul, F6EXV, has received his CE3/F6EXV licence. He will be active as soon as possible. It is reported that he will be there for 2 or 3 years.

CX, ISLA DE FLORES (URUGUAY). Pedro, CX5BW, and other CX operators will be active from IOTA SA-030, January 10-20th. They will put on the air 5 stations on all HF/VHF/UHF Bands. Special attention will be given to 6 meters. Their locator number is GF25. Activity will be on SSB, CW, RTTY and SSTV. The last two modes are a first for SA-030. They will put digital photos on the air of the expedition on SSTV. The group's callsign was not mentioned. QSL to: P.O.Box 2, Z.C. 11000, Montevideo-URUGUAY S.A.

CY0, SABLE ISLAND (BAD NEWS!). Al, VE1AL, reports, "the Canadian government has announced that it plans to close the weather station on Sable Island, unless private interests can be coerced into paying for the valuable services provided to the public. Another possibility is that the station there would be automated and serviced on a regular basis, much like the telephone facility that gets the attention of Telco employees (who happen to the be hams) on an irregular basis. Whether the others who have interests on Sable Island (oil companies and scientists studying the environment) would continue to remain there is not known. It would appear at this point that future accessibility to Sable by Amateur Radio Operators could be in severe jeopardy. On the other hand, it may be argued, this was not the case on St. Paul Island (CY9) where the lighthouse was automated a few years ago and there is no "permanent" population. While there is no maintenance of the landing site at St. Paul, sea access can be had with some degree of difficulty. Maintenance crews use government supplied helicopter service. However, Sable Island has special designation as an environmentally protected area and government permission for "visitors" would likley be scrutinized far more closely than St. Paul. Also, landing areas on the Sable Island

beaches are currently checked by "residents" prior to a plane's arrival. The landing site is a portion of beach that has been visually inspected and deemed to be packed hard enough by sea action so that a light plane equipped with very wide tires can touch down safely without becoming bogged down in the sand. No residents would preclude this and make airplane arrival difficult or even impossible. Approaching Sable by sea is, at best, extremely dangerous as it is known as "the Graveyard of the Atlantic" and this leaves only very expensive helicopter service."

H4, SOLOMON ISLAND. The German team of Bernhard, DL2GAC, and Siegfried, DK9FN, will be active here in February for at least two weeks. The callsigns to be used are H44MS for SSB and H44/DK9FN for CW.

IMPORTANT! JUST A REMINDER! EVERYBODY PLEASE READ!!! Leo, K8PYD, from the 8th Area QSL Bureau would like to remind everyone with new "VANITY CALLSIGNS" to send new SASE envelopes with your new callsigns on them. Also, you should still send an envelope or two with your old callsign on it just in case some cards continue to show up over the next few years at your QSL bureau.

PJ9, NETHERLANDS ANTILLES. The "Island/DX News" reports John, W1BIH, will be active as PJ9JT from Curacao, January 8th through March 30th. Activity will have an emphasis on CW, with operations on 160-10 meters. QSL via W1AX.

QSLS BEING LOST FOR ZS8RI. Chris, ZS6EZ, QSL Manager for ZS8RI, reports, "....A lot of people are losing their QSLs mailed to me, because they put "Edward and Marion Island" on the envelopes..... ZS8IR's QSL route is via ZS6EZ in South Africa. Do not put Edward and Marion Island on the envelope!" ..... de Chris, ZS6EZ, (Not on Marion Island!)

T32, CHRISTMAS ISLAND. T32Z, has been quite active. CW/SSB activity varies between 0130 to 0800z and also around 1900z. Check 21005, 14180, 7003 and 1826 kHz. ADDED NOTE: Kay, N7KH, the sister of T32Z, reports to OPDX that her brother is very concerned that wrong QSL information is being published by some DX bulletin. That information showed QSL via a W7! That information is totally incorrect, and any cards received by the W7 WILL NOT be forwarded to anywhere but the trash can. The correct QSL information is via N7YL, and always has been...

THE DX MAGAZINE (New Publisher). "The DX Magazine, previously published by Paul and Nancy Smith, following many years of publication by Chod Harris, has been purchase by Carl Smith, N4AA, current publisher of QRZ DX. The March/April 1997 issue will be the first one by the new publisher..." de QRZ DX .... Also, QRZ DX now has a WEB Page and will be expanded upon Carl's return from the UK. The address is: http://www.abooks.com/dx

USI ALERT (United States Islands Award Program). Jim, AA3ID, and XYL Dianne, N3GPF, will be back on Hatteras Island (NC-005S) on January 6-12th, with 10-80 meters (and 6m) capability. Their main operating frequency will be 14260 kHz. Special QSLs will be available.

VK0, HEARD ISLANDS NEWS AND UPDATES....
Jukka, OH2BUA, reports that a special real-time coverage for the Heard Island Dxpedition on the World-Wide Web is availabe now. Check the WebCluster at: http://www.clinet.fi/~jukka/heard.html

Heard Island DXpedition Teams's departure from Reunion Island has been delayed by a strike in France. The team had been ready to set sail January 3rd, but instead the team will now leave January 5th (More on this later). The bad news is the team will now head directly to Heard Island without making a planned stop at Crozet Island. John, ON4UN, reports that the French Regie Maritime, the semi-official agency that manages all ferries in France, went on strike so the crew of the Marion Dufresne, the expedition vessel, went on strike for 2 days as a sign of solidarity with their brethren in France. The team was active over the past week as TO0R from Reunion Island. Activity was mostly on 160 meters. As this was being typed, John, K8YSE, informed OPDX of the following information: "The Heard Island DXpedition team is now enroute to Heard Island per my QSO with them today around 1700z, Sunday. The expected landing date is January 12th, and they will not be operating until they get everything set up. Setup time is estimated to be 2 days. Everyone is in good spirits after their superb performance from Reunion Island on 160m. They are hoping to do the same from Heard Island." The team expects to be active for two weeks. They will sail back to Reunion Island but plan (hope) to stop at Kerguelen Island for about one day. KYFC!!

XT, BURKINA FASO. The DXNS reports Hugolin, XT2HB, is a newly licensed amateur and is often active on 14225 kHz around 1730z weekdays and 0730z at weekends. QSL direct to: Dep. 01, BP 6397, Ouagadougou, Burkina Faso.

I am setting up a new ham station and am looking for the following.
Will only consider equipment in "mint" condition (no scratches or
problems etc). Original boxes and manuals a plus. Send me you bottom
dollar on items. Will pay COD cash to Alabama.
WANTED:
Mirage A1015G 10w in/150w out 6meter amp fm/cw/ssb
Mirage 4-110 10w in/100w out 440 amp fm/cw/ssb
Mirage B-310-G 8w in/100+ out 2m amp fm/ssb/cw
Alinco DM-1350 DC Supply
Yaesu YS-60 swr/wattmeter 1.6-60 mhz
Original Desk mic for FT901 series
MFJ-264 dummy load
service/parts manuals for FT901DM,FTV901R,FTV901,YO-901
Thnx for helping me get back on air

I would think not. According to the FCC Form 610-V the application
indicated clearly that the old call sign would be "vacated".

Anyways, why would anyone want to use their old call instead of the new
one? Why did they change in the first place?

How can you apologize in the same message you use profanity. You could have just deleted it.
So you and your apology are fake (very hamlike).

I agree with your overall point that learning the code (for most people) is not such a big deal...26 letters, 10 numerals and a handful of punctuation and procedural marks...I also agree with those who say that CW has outlived its usefulness and, therefore, its legitimacy as a criterion for a license...but, the law is the law. The BIG POINT that seems to be missing (or, at least, understated) in this newsgroup is that amateur radio, itself, is at growing risk from commercial interests. We should stop squabbling about code and do what we can to preserve the hobby before it is gone.

Good luck with your studies! and 73...Tom, WA1NVS

You make an excellent point, Dave. Covenants and restrictions can limit the installation of antennas, but probably not radiation of RF. Then, the question for the condo association becomes this: would they rather have you transmitting from inside the building, or from a not-too-visible antenna well away from their VCRs? With a bit of polish, James, you might make a winning argument out of this logic...good luck and 73, Tom WA1NVS

There are balums for that purpose, but try the coax thing first. If you ground the braid at the tuner and don't connect the far end to anything, you can probably still match it and you might reduce the RF in the shack a bit. Make sure the tuner is grounded and no one touches the antenna when you are transmitting... RF burns are no more pleasant that the regular kind! Always tune at low power, too.

You're a ham...experiment a little!

It's not OK, the old call is invalid upon the issuance of the new call. I'd bet a kidney it's a case of teaching an old dog new tricks, an unitentional slip of the tongue...

Source record: 207730

This is the fairest, most honest way I have seen to share in the wealth of the world.!

Take five minutes to read this and it WILL change your life. If you want to know how to make thousands of dollars quickly, legally, and with NO CATCH, then keep reading.

The Internet has grown tremendously. It doubles in size every 4 months. Think about it. You see those 'Make Money Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, what's $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began receiving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.
Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1. Brian Truter - 101 N. Park Avenue - Springfield, IL 62702

2. J. Campbell - 1040 C Winners Circle - Bowling Green, KY 42104

3. Joost Walter - P.O. Box 259 - 2870-AG Schoonhoven The Netherlands

4. S. Thomas - P.O. Box 4945 - Tampa, FL 33677-4945

5. G. Del Buon - Horsekildevej 43 3 th - 2500 Valby - Denmark

STEP 2.
Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP 3.
Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember the more groups you post to, the more people will see your article and send you cash!

STEP 4.
You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses. Yes, that's right, only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your name at #3 or 10,000 postings. Average return, 500 people= $500.

They make 250 postings each with your name at #2= 100,000 postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list. And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

>From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So that's it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. That's the key, and that's all there is to it. Print this out right now so you can refer back to

this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS! GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

362. ELECTRONICS DIRECTORY

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: Todd Peterson <elab@netins.net>
Message-ID: <32D08821.5529@netins.net>

Body handling: HTML body converted to readable text

Greetings,

We would like to take a minute of your time to inform you of our new Electronics Resource Directory, a free, comprehensive listing of over 500 Web sites of interest to electronics enthusiasts and engineers.

The Directory is available on our web site at:
http://www.netins.net/showcase/elab

If you have an electronics-related web site and would like to add a link to our resource directory from your site, just cut-and-paste the following HTML into your page's source code:

This will place an attractive 'Electronics Resource Directory' logo onto your page that will hot-linked to our Directory for your and your visitor's convenience and use.

We thank you for your time and hope the Electronics Directory will be useful to you. Please let us know if you would like a free listing for your page in our directory!

Todd Peterson

Not realy.. just a loop of rope around the coax in most cases, attach to
the bumper and away ya go!

I have found that the pin thru the coax trick to be just that..

In one instance the pin was placed too near a multiple of a wavelength
and actually improved the sucker's singal.

374. Packet Cluster? Net Access?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: "Stanley R. Schroeder" <schroede@uor.edu>
Message-ID: <Pine.OSF.3.92.970105210335.32617A-100000@jasper.uor.edu>
Source record: 207743

I was just curious to know what exactly is a "Packet Cluster"? I understand the concept of a "Digipeater" which essentially is a packet station re-transmitting a received packet message. I would like to keep in contact with another HAM operator who will be using HF packet out in the Pacific Ocean (from a boat), but I don't have a HF rig, let alone any packet equipment at this moment. I was told that there is someone operating a "Packet Cluster" in the San Francisco / Bay area who offered internet access to licensed HAMs, essentially giving them a "Packet E-Mail Address", by which I could send and receive 3rd party packet e-mail. Is their any such system available?
73's de KF6CND (Tech Plus)
P.S. I'm in the L.A. Calif. area.

Carl wrote, "The FCC has no regulatory authority outside of US territorial limits. That would imply that 12 miles offshore they cannot enforce anything."

I beg to differ; if you're on a US registered vessel anywhere in the world then you are bound by US radio laws (and if you're in another country's territorial waters, then you are *in addition* bound by that country's laws, too).

While you were operating as XE2/WA6VSE, were you operating under Mexican authority? If you were a tech in the US, what class of license did you operate under in Mexico? In that Mexican class, were you permitted 15m voice privileges?

(Since you were licensed in '74 as WA6SVE, and I was licensed in '76 as WA6QIJ, why is your callsign out of sequential order?)

377. Hammin' on a cruise ship

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: Mike.Ward@f151.n2613.z1.fidonet.org
Message-ID: <852852668.AA07485@rochgte.fidonet.org>
Source record: 207746

My wife and I are thinking about going on an Alaskan cruise next year. We are looking at the 'Carnival' cruise line as the best prospect.

My question is: has anyone ever been on a similar cruise and operated a personal VHF or UHF radio? I was thinking about working some of the coastline stations while on board, and wondered what potential problems I might run into.

I've already contated the ARRL but they just said to contact the cruise line.

>Well Roger I agree most people are retired on the HF bands and have
>the time to learn code, but I think it takes more time to learn the
>theory than the code. You can use 30 minutes a day for 2 weeks and
>learn enough for the 13 wpm. It does not take a smart or a unoccupied
>person to learn enough to get 7 out of 10 questions right.
>KC5WCO Justin

That just goes to show the extreme variability of talent for Morse.
It took me 6 weeks to get to 5 WPM and 13 months of 2 hours a day to
get to 13 WPM (and no it didn't come 1 WPM per month either, I was
stuck at 10 WPM for most of that time), and even so I only squeaked
by with one letter to spare. (I was a middle schooler with time on my
hands, and a stubborn streak some of you may have noticed, or I'd have
chucked the idea of staying a ham, I had my Novice of course.) OTOH
it took about 6 hours study to get the General theory down cold. This
was in 1963, before Bash and before published question pools.

The theory made sense, everything derives from a few basic principles.
Once you grasp those, everything else is trivial. But there is no rationale
to Morse, you have to program the wetware modem to do the rote decryption
whether it is prewired for that task or not. Mine obviously was not. Now
I'd rather have a root canal than copy Morse, but I did it for several years
after I got my license as part of my duties with the Ky traffic net, but I
never got much better at it. I finally wised up and realized that machines
are better at repetitive mechanization of alphanumeric data than humans are,
and got into handling traffic via RTTY. My speed of copy suddenly shot up
to 60 WPM. (I was very motivated to handle traffic because I had kin and
many friends in the military to whom it meant a lot.)

Oddly enough, I can recognize a few common words in Baudot by ear. I
could never do that with Morse. It was strictly puzzle out each letter
one at a time, write it down, and go back later and try to figure out
what it was supposed to say. That even holds for things like my call
sign or even CQ.

I tend to get very irate when people imply that Morse copy is easy,
or that those who don't get it are lazy. I know those are lies. It
may be easy for some, but not for others. If there were a real
justification for the requirement, I'd just accept that variability
as a fact of life and go on. But the requirement is not justified,
so it is just hazing to no good purpose. And it bears much more
heavily on some than others.

>I've been a Ham for almost 25 years---haven't used CW in this decade and
>never got faster than 15-16 WPM. BUT, I support the code requirement
>for one reason. We value what we have to work to get. One reason that
>the CB bands are chaoic was that the license was given away. Ham
>licenses have to be earned. Most people won't trash something they had
>to work to get.

That's an odd set of values you have. A license isn't a dusty trophy
on a shelf, a rememberance of some effort exerted in the past. It is
a tool, and like any tool, its value lies in what it enables you to
do, today and tommorrow. It doesn't matter if you scrimped and saved
for the tool, or found it by the side of the road. If it is a good
tool, you'll keep it sharp and clean because of what it enables you
to do, today and tommorrow. If you chuck that trophy in the trash,
you'll have lost nothing, the memory of the effort exerted to get
it is still intact. But if you chuck a good tool in the trash, you'll
miss it, today and tommorrow, because you won't be able to accomplish
the things it allowed you to do.

The CB license was not a good tool. It was of cheap and brittle
material, poorly formed. It was worth little because it allowed
you to accomplish little. An amateur license is a good tool. It
is of sound material and useful for many things. If doing those
things is important to you, you'll keep it sharp and clean,
regardless whether you found the license in a box of Cracker
Jacks or whether you sweated blood to get it.

Some of my most prized tools cost me nothing, and some of the
most expensive tools I've owned wound up in the trash because
they weren't up to the job. Looking backward never accomplishes
anything worthwhile. Only by keeping your eyes on the goals ahead
can you excel. I prize things which have present and future value,
but have little time to waste on old campaign ribbons.

381. VHF amp for sale/trade

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: dann0fpe@aol.com
Message-ID: <19970105054600.AAA13033@ladder01.news.aol.com>
Source record: 207765

I have a like new commercial grade VHF amp for sale.
It is a TPL PA3-1FE.....

15 watts in for 80 watts out
45 watts in for 120 watts out..

This amp has no more than 5 hours use on it and is still factory sealed.

It will work 138 to 174 MHZ..

I will sell it for $125 shipped to ur door or trade for one of the
following

I will trade the amp for any one of the following:

A KPC-3 with latest firmware and 100k mailbox or
A KPC-4 with software (will add cash to this trade)
A HTX-100 in MINT condition will all acces.
A older 8088 laptop computer with or without Harddrive
A Tandy 100 or 101 in working condition
A Icom IC-2at with a good battery in working order.....

My equipment is in new near mint working condition and I am only intersted
in
trades for the same
condition equipment

Contact me via Email at DanN0FPE@AOL.COM
or via packet at N0FPE@N0LBA.#CEMO.MO.USA.NOAM
or Phone 573-449-3690 after 5pm central....

Come on! Give us a break allready!
Where do you get this Idea that it's the end of all life, as we know it?

I get tired of reading about all the doom and gloom about ham radio
comming to an end. (I know, if I don't like it, don't read it.)

Relax and enjoy the hobby. Thats what it's there for, fun!
If someone does not want to learn CW, so what?
It's their loss.
I get a great deal of enjoyment out of Amateur radio.
I wanted full priveliges, so I studied and got my extra as soon as I
could. Went from Tech-plus to Extra in about six months.
Some people don't care to up-grade for whatever reason, but they still
may enjoy Ham radio as much as anyone else.

Lighten up. The sky is not falling!

> Loren Pettijohn WA3ZLX

Your license, WA3ZLX, expired 05-Nov-95. Under FCC Part 97,
Section 97.19 (d) it states:

"When the licensee has submitted a timely application for renewal
of an unexpired license (between 60 and 90 days prior to the end of the
license term is recommended), the licensee may continue to operate until
the disposition of the application has been determined. If a license
expires, application for renewal made be made during a grace period of
2 years after the expiration date. During this grace period, the expired
license is not valid. A license renewed during the grace period must be
dated as of the date of the renewal."

So, Loren, if you send a renewal dated before 04-Nov-97, your
older license may be re-instated.

But, you knew that.... didn't you. Every ham ought to have a
Copy of Part 97 in their possession, eh?

397. Re: FCC License question

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: Lyle Koehler <k0lr@emily.net>
Message-ID: <32CFCBA4.B8B@emily.net>
Source record: 207781

The calsign database shows that your license expired on 5 November 1995.
You are still within the two year grace period, so the following rule
applies:

(b) A person who had been granted an amateur station license, but the
license has expired, may apply for renewal of the license for another
term
during a 2 year filing grace period. The application document must be
received by the FCC at 1270 Fairfield Road, Gettysburg, PA 17325-7245
prior to the end of the grace period. For an operator/primary station
license, the application must be made on FCC Form 610. For a club,
military
recreation, or RACES station license, the application must be made on
FCC
Form 610-B. Unless and until the license is renewed, no privileges in
the
Part are conferred.

Hi Vince .. Great that u are interested in Ham Radio -- good luck. Take
a look at the Elmers Pages which are available on the DX Reference pages
below.

Also goto the ARRL Page at:
http://www.arrl.org/newham.html
They have a packet they will mail to u with all the info.

Also Radio Shack has "Starting in ham radio" books as well as Ham Radio
Stores such as HRO and many others -- see Manufacturers for one near you
-- on the DX Reference Page.

Best Regards

Try a bit of belt dressing compound (sparingly). This will increase
friction and reduce the slippage.

>2. The same radio has developed some drift. The drift is in the HF

>the DC voltage doesn't drift. The tuning switch contacts have been
>cleaned. No luck. Any ideas?

Frequency drift is usually caused by a capacitor changing value
with temperature. Oscillators are often stabilized by choosing
a suitable combination of capacitors with differing temperature
coefficients so that total temperature response nets out to zero.
As these capacitors age, these characteristics can change.

The first thing I'd look for is a capacitor in the oscillator
circuit that is cracked or discolored. Moisture will cause
gross changes in capacitor behavior. You can also try using
a heat gun to gently heat suspects and observe their behavior.
Note, every capacitor will show some change in behavior with
temperature, but you are looking for one that shows an unusual
change.

You should plot drift with respect to time. Determine if the
drift is negative or positive, or whether it yo-yos up and
down at different times. That'll give you clues as to what
may be wrong.

>http://www.panix.com/~melling/net1/ham_radio/index.html

Repeater frequency lists are a somewhat hot potato(e) - I guess that would be a warm potato - in the frequency coordination biz. The best information is compiled by frequency coordination groups. A few give their info away, but many provide it only to the ARRL for the repeater directory, or publish it themselves (for sale). Beginning this year, the ARRL is paying frequency coordination bodies for the information that will be published in the repeater directory.

The ARRL makes some money from the repeater directory (book, disc... CD someday?), and they're not going to give it away online. And they're not going to permit anyone else to publish that information online either (there are some dummy listings to trap people who lift info).

One company has published an on-the-web directory that I've found. Cruise to:

http://home.earthlink.net/~artsci/repmain.html

and check it out. I've compared their info to known local repeaters, and the accuracy is a ballpark 60 or 70% here in eastern North Carolina. The miss some repeaters that are on the air, and list some that are not. But that's true of every repeater directory, including the ARRL's. I don't know where they get their info, but if it's not from the coordinators, it won't be updated and as accurate as possible. It's just too hard to communicate with repeater owners everywhere and keep up to date.

It's too bad - repeater listings are a 'natural' for WWW information sites. But that conflicts with the money spent and made in providing that info.

>Yeah, we heard this line of reasoning before. 8 years ago to be exact,
>when the existing codeless tech license was proposed. Guess what? It wasn't
>so back then. It ain't so now (its even worse, given the popularity of
>computers and the Internet).

I still contend, things change. Human beings hate change. More than likely, anyone who has
a ham radio license will not lose any p=
riviledges when changes come. More than likey any changes will not make it any easier to
get a license.

BTW, it's been about 40 years since SSB took over AM in the ham bands. It's probably time
for another technological advancement to =

bandwidth savings. Does anyone like that idea of change, when your SSB rig will become outmoded?

> like to select?

Mike,

Once again, in your constant attempts to distort reality to suit your
purposes,
you conveniently choose to ignore the fact that has been stated by Bill
Sohl and others that "you could choose to not learn anything about RTTY and
miss ALL of the RTTY-related questions on a ham test and STILL pass and get
a license." This applies to ALL classes of license ... even extra.

The same is NOT true of CW ... it's the ONLY mode with its own pass/fail
test element.

To me, and many others, it is absurd that someone can become an extra
without knowing anything about, by your example, RTTY (or any other
technical aspect of radio communications, for that matter.)

This is SUPPOSED (per ITU definitions, as well as a lot of FCC verbage) to
be a TECHNICAL activity ... with public service aspects.

Please stop insisting on perverting it into something that it was never
intended to be ("just a hobby") ... that attitude and the "code forever"
attitude are the two most destructive things in ham radio.

I have a Tektronix Type 551 oscilloscope from a yard sale...

And it has a mighty weird 16-Pin power connector; it looks like a
rack-mount connector.

The back of the oscilloscope is marked "Wired for 117V".

Does anyone have any idea whether I can just apply 117V power to
some pins of this connector. And, if so, which pins it would be?

Any help or related information would be much appreciated. Thanks!

Robert Bernstein

Do you have information on Amateur Radio or other interesting items you might have picked up involving radio communications during the recent weather-related disasters in California, Oregon, Washing, Nevada or Idaho?

Heavy snow and ice storms collapsed buildings. Then, this was followed by warm rains, resulting is massive flooding and mud slides throughout the western U.S. Over 100,000 people have been evacuated in California. 20 roads remain closed in our county (in Washington) at this point, a week after the worst of the weather has passed by.

Any information you have on radio communications, and especially Amateur Radio Emergency Services (ARES) or Radio Amatuer Civil Emergency Service (RACES) functions is wanted for use at our web site.

Please visit http://www.hamradio-online.com - now read in 55 countries around the world.

Thanks!

>It's too bad - repeater listings are a 'natural' for WWW information sites.
>But that conflicts with the money spent and made in providing that info.

In the same vein as "nobody owns a frequency", it cannot be stipulated
that anyone owns a frequency list.

So, what someone has to do is this: set up a site to take submissions and
have people from around the country accumulate listings and submit them
to the site.

If I'm not mistaken, the problem with past repeater lists on the Internet
was that they were taken from the ARRL Repeater Guide, which in of itself
is copyrighted. However, in the same vein that the listings in the Yellow
Pages are not copyrighted (only the accumulated work itself is
copyrighted) a mere list of frequencies is not.

424. Shack cleaning sale.....

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: dann0fpe@aol.com
Message-ID: <19970105230000.SAA06433@ladder01.news.aol.com>
Source record: 207808

I have the following items for sale or trade:

TPL commercial grade VHF amp 120 watts out with 45 watts in. In near new condition, still
factory sealed works 138 to 174 mhz FM only.....$125 shipped

HYGAIN Hyrange II 10 meter FM converted CB...works and looks great
$35 shipped

SSC DTMF decoder in excellent condition with horn honk option, includes hookup cable..
.. $35 shipped

Uniden APH-52 2 channel 5 watt commercial portable, with drop in charger, NO crystals
, fair battery, $45 shipped

Cirrus Logic VGA card, 16 color, works fine, pulled from my computer $20 shipped

AMI 486sx/33 motherboard with Intel processer ...640k no extra memory
$40 shipped
same thing as above with 8 megs of ram $85

AMD 486sx/25 baby mother board with daughter board, 4 megs ram, onboard VGA , PS/2
style mouse port , Ps/2 style keyboard , on board drive controllers, No I/O board needed
$85 shipped

I have the following crystals for the Midland 13-509 220mhz rig that are surplus to my needs. These crystals also will work in the Cobra and the Clegg 220 rigs.

Transmit Receive
_____
222.32 223.92
222.36 223.96
223.28 224.88
222.70 224.30

I will take $7.00 a pair shipped
If you take all of them I will take $20.00 shipped

Let me know if any or all of these look like something you might use.

I also have the following VHF scanner crystals. These will work in any rig having a 10.7 IF

RECEIVE ONLY !!!!!!!
155.370 147.645 155.100 154.370 146.940 154.92

153.710 155.835 147.330 146.820 155.490 155.300
155.400
All of the above crystals are $2.50 each or $25.00 for all of them shipped
to your door.

I also have following 2 meter pairs for the older Kenwood, Icom, regency
ect 2 meter radios
using a 10.7 if
Transmit Receive
147.81 147.21
$7.00 a pair shipped to your door

Contact me in the following ways
Packet N0FPE@N0LBA.#CEMO.MO.USA.NOAM
EMAIL DanN0FPE@AOL.COM
Phone 1-573-449-3690 after 5pm central (PAY ATTENTION TO THE

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: I don't understand your complaint. Isn't it the purpose of a repeater
: to act as a range extending device? By nature of its favored location,
: it allows stations to easily maintain contact when simplex paths would
: be difficult at best, virtually impossible at worst. As to your complaint
: that they could use the telephone, that's true of virtually any amateur
: contact. Certainly Dxers could just make a long distance call and save
: themselves hours of frustration. Why don't they do that? Because obviously
: it wouldn't be amateur radio if they used the telephone.

Well, we all have our own definitions of ham radio. Yakking on repeaters
doesn't happen to fit mine. At least, not several times in one day, usually
with the same people.

I'm certain that there is no problem with maintaining simplex contact in
this case. And, maybe, this comes from my own idea of repeater discipline,
if you want to call it that: make the initial contact on the repeater, then
switch to simplex and stay there, unless conditions warrant going back on
the repeater. Along those lines, my philosophy is that repeaters are there to
facilitate communications for hams who are mobile, or perhaps on foot with
an HT. IOW, not for *continued* use between stations who could easily
maintain a conversation on simplex.

: If they are monopolizing the repeater and not allowing opportunities
: for others to use it, you may have a valid complaint. But if, as is
: the typical case, the repeater would be sitting idle if they weren't
: using it, then there is no cause for complaint.

In this case, I'd rather hear dead air; but that's just me. Others may not
be that bothered by the conversations.
[snip]

: As a repeater owner, I encourage activity on the repeater. I especially
: encourage long technical discussions, but any subject fit to go on the
: air is acceptable. I do discourage the inane hello-goodbye contentless
: type of contact. And I certainly discourage stifling fixed rotation
: roundtable activities. I encourage people using the repeater to have
: something interesting to say. I encourage animated discussion. And I
: expect anyone with something to say to have the gumption to chime in
: and say it. I don't try to dictate any of that, of course, but I try to
: lead them into that sort of action by example.

I doubt that you'd find what this group has to say, is very interesting.
Otherewise, I agree. We have a great repeater in the area that has a loose
roundtable as the format, but it's mostly tech talk - interesting!

: The repeater serves as a watering hole, a gathering place for people of
: like interests who may be spread over a large geographic area. The range
: extension it provides allows them to easily stay in contact with their
: fellows, and the common frequency serves as a convienent meeting place.
: That's why it is there.

: I don't care if they are operating from a fixed station or a mobile
: or on foot. That's irrelevant. What does matter is that they want to
: have contact with others of similar interests, and the repeater can
: serve to facilitate those contacts.

Your repeater, your rules.

>Amateur radio is many things but above all a learning experience.

Indeed, it is supposed to be a lifelong learning laboratory. And
like any laboratory course, there have to be prerequisites to make
sure the student won't pose a hazard to himself or others. The lab
can be a dangerous place if you don't know what you are doing. It
can be physically dangerous, and it can be a place where you can
harm others with your actions, IE interfere with other services
through improper operation.

>I imagine very few hams (code or no-code) could pass all the written
>elements for the advanced or extra class ticket. There are a good
>number of hams who are not professionals in a field closely-related to
>our hobby.

If you think that the amateur exams (through Extra) are reflective of
a professional level of knowledge, you are grossly mistaken. They are
at most at the lowest introductory course level. Most of the material,
enough to pass, can be handled by a bright 8th grader (and I mean
understood not just memorized). I've taught it to 8th graders.

>The novice, techs and general tickets are steps for those
>who wish to improve their technical knowledge and skills. Increased
>spectrum privileges are supposed to be an incentive to learn, not that
>they really appear to have done that much good.

That's because the incentive is primarily to increase Morse Code
receiving speed, not technical knowledge.

>Requiring that an entry-level ham be able to pass today's advanced
>class exam (see note below) will limit the growth of amateur radio
>more than the code speed requirement ever did. With no grandfathering
>every ham with less than an advanced ticket would have to be
>re-tested. What percentage of those hams would be able to remain hams
>with a year's notice? Fifty, sixty per cent perhaps?

Anyone who has been an amateur for a year who can't pass the current
Advanced without further study has demonstrated he's memtally incapable
of being a competent amateur radio licensee. The test is very rudimentary,
and deals with things any amateur should have reason to know by the
time he has been operating for a year. You can miss 30% and still pass.
That means you can throw out most of the "hard" questions and just
coast through on the routine stuff.

But it is your idea that there be no grandfathering, not mine.
That was a horrible political mistake in 1968, and it would be
a mistake today as well. Politically, we need to let the OT
Generals slide through. They've been doing essentially the same
thing as Extras on essentially the same spectrum for many years.
It would be grossly unfair to kick them off and tell them that
they have to retest to get back what they already had.

Techs and Novices can stay Techs and Novices until they upgrade.
There just won't be any more new Tech or Novice licenses issued.
The current Tech exam is much too weak, and the current Novice
written is *extremely* much too weak (yet which class is declining
and which is growing rapidly?). We need to change that for future
licensees, but for good political reasons we can't just kick
present licensees out into the street. (There's precedent for
this. In the 50s, Advanced license holders were allowed to renew
though no new ones were being granted.)

>No matter what losses are incurred in number of "qualified" hams what
>happens to the flow of new blood. How many potential hams who are not
>professionals in a closely related field will be turned away. The
>no-code VHF ticket flood will be turned into a trickle, the amateur
>spectrum becomes the professional's playground.

I don't believe this for a moment. When Tech changed from a trickle
to a flood, it wasn't because of a watered down written exam (that
had already happened in conjunction with Novice Enhancement, and was
greeted with a yawn). It was because the *Morse* receiving speed test
was eliminated. That's the obstruction to the flow of new blood, not
technical testing.

Most amateurs upgrading today skip General and go direct to Advanced.
But most Techs who upgrade don't skip Tech Plus. Why is that? It's
the *Morse* test. If it weren't for the 13 WPM Morse test, most would
upgrade directly from Tech to Advanced. I'd venture a guess, and
I'm pretty sure it is a good one, that the vast majority of the
time a Tech spends working toward his upgrade is spent on Morse
practice and not study of technical material. Note, 40% of Techs

have upgraded, and I suggest those who haven't have been stymied by the *Morse* exam, not the technical exam.

I wouldn't be at all surprised if a good number of entrants chose to go directly from no license to Advanced if the Morse test were removed, even though there was still the option of a Tech license with an easier test. It just isn't that big a deal to anyone who can pass a Middle School introductory science course. (And do you really want amateurs sharing the bands with you who can't do that?)

>Diversity within the ranks of our hobby will disappear as it becomes
>the playground of the technical professional. Anyone with the desire
>to learn but without the prerequesite knowledge is pretty much SOL. No
>clubs will be able to offer classes. I wouldn't want to guess at how
>long it would take just to explain all the material once without
>questions (elements 2 - 4A). If anyone wants to hazard a guess at how
>many hours, I'd love to hear it. I am guessing that it couldn't be
>covered in a course lasting a college semester with questions and
>explanations.

Give me a class of 8th graders who want to learn for 2 hours a week for 6 weeks (about how long it takes to advance a Scout beyond Tenderfoot) and the majority of them will pass their Advanced license (sans Morse). And I won't even let them look at the question pool. It isn't a total giveaway that can be taught in a single weekend session like the Tech, but it isn't rocket science either. It *certainly* isn't a professional level exam.

Now note very well that I do not suggest that the current Advanced exam be used as the entry level exam. I explained recently the form I think the exams should take. The level of knowledge required may be similar, but the form of the test would be very different. I'm interested in the applicant showing understanding of the concepts, and not just parroting back rote answers. I'm perfectly content to let the applicant have a copy of Part 97 so he can *look up* regulations which might apply to the situation described in a question, just as I'd expect him to do in real life. And I'm perfectly content to let him have reference handbooks for the same purpose for the technical questions.

A working engineer who doesn't have a copy of the Code regulations for his field, and a CRC, Mark's, or other appropriate handbook constantly at his fingertips is an engineer I'd suspect of being incompetent. An amateur who doesn't have a copy of Part 97 and at least the ARRL Handbook at his fingertips I'd also consider incompetent. This extrasomatic knowledge base, and the skill to access it, is simply a necessary part of his skill set. So I would expect testing to proceed in the same environment.

jherman@sierra.NET (Jacqueline Herman) writes:
>Take a look through the early books on wireless to see why the code speed
>was raised from 5wpm to 10 (then higher). Studying the history of
>radio, and in particular, amateur radio, will answer many of your questions.
>(The 1912 Radio Act of Congress dictated that an amateur [defined as some-
>one who operates a radio station for pleasure] needed to know code "at
>a speed of at least 5wpm.")

Ah, the roar of spark, the smell of ozone. If we, and the government
and life safety stations which might need to contact us to tell us to
buzz off, were limited to 85 year old equipment, this 85 year old
regulation might still make some sense.

In regard to radio history, take a look especially at one of your
favorites, "200 Meters and Down" where it is plainly stated that
the objective in 1934 of the ARRL requesting the raising of Morse
test speeds was to *ration phone spectrum*. The author claimed no
more than 16,000 amateurs could be accomodated on phone, so raising
the Morse test speed should be used to limit the number of "higher
class" (IE authorized to use phone) licensees to that number.

Never mind that there is no rational connection between Morse speed
and phone (or any other non-OOK) operation. Never mind that we have
over 363,000 US amateurs authorized for HF phone operation today,
yet we haven't suffered the congestive collapse predicted in 1934
if we exceeded 16,000. Never mind that technology changes. We have
to suffer under these ill considered requirements from the past,
unwisely reinforced again in 1968, anyway.

From: interflex@msn.com
Message-ID: <00001fef+00005a4b@msn.com>
Source record: 207898

Eric,

The Morse Code requirement served a number of objectives. One useful purpose was to raise the "price" of getting a license. Those who were willing to pay the "price" (spend the time, learn the code) got licensed (if they learned/memorized the other elements) those who didn't want to pay the "price" didn't get licenses. It also gave those who earned the privilege of getting a license a bit of satisfaction in achieving something relatively unique (how many people know the morse code? As a percentage of the population?)

The code also is useful at times when listening to repeater IDs (in morse code) and identifying beacons (including navigation aids). It is fun for some folks who like building transmitters and receivers, because the power levels required are low. the construction is fairly simple, and the ability to work distant stations is easier using morse code than it is on sideband, in general.

There is no simple reason why code should be required, or why it is useful, or why it should be eliminated. It was once a requirement to be licensed at one time, and now it is not a requirement. There are some that would argue that a license to operate a ham radio should be granted upon paying a fee, much like paying a fee for a fishing license, or even no fee at all, like the current marine radio license or aircraft radio license. Time will tell.

Even if the morse code is not a requirement for a license, however, some will want to learn it. Knowledge of circuit design is not a requirement either, but some will want to learn that as well. Also getting a license is not guarantee that it will be used much -- those who got licenses but really weren't really that interested in amateur radio (did it for fun, a friend convinced them, etc.) simply don't get on the air much, so it is a self-selecting proposition.

In the final analysis, those who want to use amateur radio will get a license, somehow (code or not) and those who really don't care much one way or the other may indeed get a license, but they may not use the privileges much.

Is it to our collective advantage to have lots of licensed amateurs? Yes, to give the amateurs a louder voice in issues affecting frequencies and privileges. Is Morse Code an important issue? It might seem so, but in general, if someone wants a license, they will learn the code if that is a requirement, or do whatever else is required if they want to make use of ham radios.

Will more licenses mean overcrowded frequencies? I've been a ham since 1959, and the frequencies have always been crowded. Furthermore, it isn't the license standards that are causing more people to get licensed, it's the number of people who are already licensed, that carry around these very well engineered small radios with lots of features, and "plug and play" nature of today's radios, and the growing promotion of ham radio that is causing more licenses to be issued.

The license is just the "admission ticket" into amateur radio. With the admission, the licensee stands to learn as much or as little about the various parts of the "hobby" as they wish. Those of us who like to design, build, and experiment should encourage others. Those who like doing community service should encourage others. And like anything else, some will excell, some will just have fun, and others will drop out of the hobby. Hopefully all will have had a good experience.

Have fun.

Jeff

436. Alinco DJ-191 Conversion

Is anyone taking part in "1997 Hunting Lions in the Air Contest", sponsored by Lions Clubs.
0900 UTC January 11 - 2100 UTC Sunday January 12?

I was asked to take part on behalf of the Moose Factory Islands Lions Club - if you compete for a club you count as a Lions station which is worth more points.

Never heard of this contest before, coordinated through Lions Club of Flen (Sweden).

James,

CC&R's cannot prohibit transmission on short wave frequencies! This
is solely the domain of the FCC. Get the nearest FCC FOB (Field
Operations Buro) Engineeer in Charge to write a letter explaining that
to take with you.

Its up to you on antennas/towers as they can be restricted as you
voluntarily signed or agreed to the CC&R's.

The Association Lawyer will quickly recognize that if the "shortwave
portion" is unconstitutional then all the CC&R's are thrown out.
Useful back pocket info to mold a compromise!!!

Don Stoner has a web page on CC&R's you might want to consult.

You might ask if the current rule is being inforced at all?
Why, because if they say yes, then you can ask if they
have stopped all use of cell phones (900 MHz is short
wave). Just a thought.

>I'm not asking for comments on CC&Rs (especially since I _like_ CC&Rs). I

So? If you don't comprehend basic English, you'll have a hard time
with CW contacts to stateside amateurs too. That is what those letters
spell out. But, irrelevant, answer the questions I posed instead of
dancing around the maypole (or is it a flaming cross?).

In point of fact, there are questions which cover the theory of
amplitude modulation on the exams. Both SSB and OOK are forms of
amplitude modulation. Of course you can miss every question on
amplitude modulation and still pass the exam. If the same were
true for Morse, we wouldn't be having this discussion.

But in most places the building code requires that a licensed electrician
handle any wiring other than low voltage wiring. And while the HV in a TV
can bite, it rarely kills, and most homeowners don't build or repair their
own TVs anyway. As long as he leaves the covers on, there is no objection
to the apprentice buying and using a UL listed appliance which uses HV,
but things he's going to stick his hands into up to his elbows need to
be a bit more intrinsicly safe because we have to assume he doesn't quite
know what he is doing yet, else he'd be a journeyman rather than an
apprentice.

448. WTT: Korg 01W Synth for HF Ham Rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-05 00:00:00 UTC
From: peknslk@aol.com
Message-ID: <19970105054200.AAA12930@ladder01.news.aol.com>
Source record: 207911

Hi! I'm still looking to trade my Korg 01W synth for one of the following
clean, 100% functional HF rigs (+/- cash, as appropriate):

Kenwood TS50S
Icom IC706 / IC735 / IC730
Ten Tec Scout / Argosy
Alinco DX70

The 01W is a 32 voice, 16 channel multitimbral synth. There are 6 Mb of
ROM samples,
and a complete effects section. The 01W also includes a 16 track
sequencer. The
keyboard itself is a 61 key velocity and aftertouch sensitive board.

It is in excellent condition, and includes the manual, box, and
Synth/Piano card set.
It is worth ~ $700 on the open market.

Please drop me a note if interested.

Thanks!

I posted material some time ago regarding the Webb Laboratories Education & Professional Partnership Programs, unprecedented opportunities through which every faculty member, graduate student and undergraduate student (alternatively for the PP program - each member of a working group of designers) can achieve true ownership, at school, home and on the job, of powerful electronic CAE capability. The EP and PP Programs provide general, graphical nodal circuit analysis, RF/microwave-specific analysis, unconstrained nodal noise capability and true 'floating' two-nodes-per-port definition. In addition, the EP and PP Programs include the industry's most comprehensive transmission structure analysis/synthesis engine as well as the powerful SystemPlus suite of design tools for the wireless/receiver/system designer.

The complete EP or PP Program package, including over 500 pages of documentation, may be distributed department/group/consortium/company-wide with no restrictions, without expiration, and at no liability to the School, Group, Consortium or Corporation. EP/PP Program details, an editorial review and a growing example library may be found at:

http://www.webblabs.com/ep.htm

or

http://www.webblabs.com/pp.htm

I ask that you forward this announcement to potentially interested individuals. If you prefer, kindly reply with names and e-mail addresses of those to whom I should convey information directly. Thank you for taking the time to consider what has become a unique access and ownership opportunity for a great number of designers worldwide.

Wishing you a Happy New Year!

> ARRL LIFE Member
>

Having been a member of the "nocode crowd" for a year, I can tell you
why I almost
lost interest (along with many others). It was not because of the money
needed, radios
and antena can be built easily and cheeply enough. The biggest problem
is with the
holyer-than-thou attitude given a vast majority or no-code techs. When
old timers on
the local "machines" found out I was a no-code they had nothing further
to say. But I

prevailed and found a group of no-codes on 2M simplex (where the real operators are)
and we challenged eachother to an up-grade contest.

Another problem reared its ugly head; most of the high and mighty general class and above
crowd did not have the time, nor inclination to help the new codeless techs advance in their
amateur career. But if they spent half the ammount of time being an ELMER as they spent
berating and ignoring no code techs the hobby would be better off. Someone who is taught
by a person experienced in the field and given the opprtunity to grow within the hobby
will be a strong asset; but the same person being treated like an out cast could give a
darn about what happens to the hobby.

Since I have become a ham, I have helped 4 people join the hobby. Two of them have upgraded
to Tech + and another is in a race with me to see who EARNS Extra first. I will continue
this practice as it is the way it should be. Unfortunatly, most people reading this probably
don't really care. They have their license, their clique and their frequency, everyone else
be damned.

454. Looking for radio batteries

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-06 00:00:00 UTC
From: chris_delikatny@mindlink.bc.ca
Message-ID: <32d1489c.5306469@news.mindlink.net>
Source record: 207667

I have two Uniden portable hand held vhf radios that need new battery packs. Is there somewhere to get batteries for units such as these such as a battery supplier?

Rebuilding the existing packs might be pretty difficult since the cells seem to be an odd length.

Chris

455. Vertical HF Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-06 00:00:00 UTC
From: Jim and Donna Sens <jdsens@ix.netcom.com>
Message-ID: <32D1F1E6.D3@ix.netcom.com>
Source record: 207668

I am looking into putting an 10-40/80m HF antenna up. The size of my house and yard make it difficult to put up a dipole, and nearby trees block an area that I could put up a yagi. I've seen ads in QST for Telex P/N DX88 and Cushcraft P/N R7000. I would put it on my roof on a short 3' tower. Can anyone provide feedback on how well they work and just what can you do with them? I am wondering how they do in DX work, and how well they perform without a great ground. Thanks in advance for your input!

Then go somewhere else.

>I am a newbie to ham radio and I am only 14 years old. I do not know
morse >code (but I definately will be in the near future).

And that makes you a credible spokesman to tell people on this newsgroup
what they can and cannot "complain" about, right?

> I must learn it in order to get my license, there is no way they are
going to >change it

Judging from the growing sentiment that Morse is obsolete and discourages
newcomers from joining our ranks, I would suggest there's a very good
chance the rules will be changed in the near future. Also, the fact that
no compelling interest is being served the public or the government by
continuing the requirement leaves it wide open to a court challenge, if
need be.

>so I just decided I WILL learn it. Hey, if all the others can do it
>why can't you?

Whether one "can" or "can't" learn it is not the issue. The issue is
whether or not there still remains a compelling interest in requiring
Morse knowledge to obtain a US government-issued radio license in 1997.

>I think you SHOULD know morse code in order to transmit
>mainly for the reason that it means that I know the people that I talk
>to are keen and are of a decent intelligence!

So now you're equating knowledge of an antiquated, mechanical
communications system of "dits" and "dahs" with intelligence, eh? I'm
sure the world's computer programmers and engineers would get a real
chuckle over that line of logic!

>So all you people who keep complaining just SHUT THE FUCK UP!

Congratulations, kid. You have just destroyed any amount of credibility
you may have built up to this point. Keep beeping on your Archer Space
Patrol walkie talkies and have a nice day.

>heavily on some than others.

If you copy Morse code by strict memorization (i.e. hear a letter,
try to remember it, write it down), 13 wpm is pretty easy if you've
memorized the aphabet well. If you have to spend a long time
trying to remember what each letter is, you'll have problems.
Once you get above 13 wpm and into the 20+ wpm range, a new
method of copy seems to kick in where you just recognize
the letter instantly and write it down.

It's as if, instead of hearing someone say "bee" and you write down
"B", you hear "Dahditditdit" and you write down a "B".

I'm convinced that at this level, copying Morse code is no more
difficult than learning a new foreign alphabet really well. As long
as one is given enough time between sounds to write down the
corresponding character, anyone should be able to copy it from its
audio or spoken equivalent. Now, the question as to the difficulty
of an adult learning a new alphabet is a whole nother matter.
I would suspect that some people would have great difficulty.

For testing speeds, I don't think that the memorization skill involved
is anywhere near as difficult as those skills required to memorize the
different terminologies in, say, high school biology. Granted,
some people never pass high school biology either.

Has anyone read QST in regards to the Report and Order for amateurs to conduct safety tests for RF exposure? (Nov. '96, page 75). I was just wondering if anyone feels that these rules will come to materialize, and if so, how they'll affect hams. What kind of "safety tests" will a ham have to perform in order to comply? My biggest question is how does the FCC plan to enforce such new regulations when they say they don't have the resources to catch violators such as the ones on 14.313 Mhz. and 3.8945 Mhz.

Anyone have any thoughts on this?

Have a Yaesu 2070 dual band commercial HT, 32 channels, rapid charger,
program kit & cable, software, manual, etc. Radio does
136-174/440-470. Can be modded to do 470-490 or any split by factory.
$650/bo cash. Please reply asap, no reasonable offer refused.
Radio is in great condition, has a DTMF keypad, PL decode/encode and 2
tone decode board.
Must sell ASAP, $650/best offer. Feel free to e-mail your best offer
or call anytime, 415-939-1037!
This radio is worth over $700 with program kit, rapid charger, etc...
Evan

Will consider trade for Icom F40 450-500 split, or Motorola JT-1000,
or other UHF 440-490 UHF HT with DPL capabilites & Alpha.

Gary's usually right on target most of the time, but I'm afraid his
otherwise creative metaphors don't completely hold up for the argument
that he's trying to make. At the very least, it would be disingenuous
to make sweeping statements about all rec.radio.amateur.* newsgroups
especially when characterizing them as a corollary to the alleged evils
of "Incentive" licensing or the definite evils of segregation.

With the exceptions of .policy and .misc, which by nature are probably
catch-alls for a lot of cruft anyway (think about it, by definition one
group is for flamage, the other group is for subjects that don't fit
anywhere else under rec.radio.amateur.*), the special-topic newsgroups:

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors
rec.radio.amateur.digital.misc
rec.radio.amateur.dx
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.space

HAVE stayed substantially on-topic throughout their existence.
Furthermore, like stock splits and initial public offerings on Wall
Street, the overall "capitalization" (in the form of positive activity,
contributions, and information) has gone up overall from when there was
just one newsgroup, even if growth of the net is taken into account.

There has also been some recent progress in topic-specific FAQ's and WWW pages for these groups (reflecting pride of association with a manageable and clearly-defined specialty newsgroup) that might not have existed if it was all in one basket (consider group inaction, apathy, and "Tragedy of the Commons" phenomena in larger and more chaotic communities)

So-called "sacrifice" newsgroups (comp.*.advocacy is a good example) are not without merit, as they at least provide a target for articles that would otherwise spill into newsgroups where they would be unwelcome (consider the "cockroach" argument given for the 147.135 repeater in LA).

In addition, breaking newsgroups into hierarchies in response to growth is standard operating procedure for Usenet and seems to be reasonably successful, with exceptions few and far between, elsewhere. It seems that technology transfer, and trying to emulate what is done successfully in other fields, would be something that you would support.

I am a member. Unfortunately, this means they will use my dues to lobby
for maintaining the code requirement in perpetutity. It is noticeable
that the all-hams-should-join-the-ARRL contingent seems to have the same
membership as the code-tests-forever group.

> Change what you don't like from the inside, but,

This seems only slightly more likely than me being able to do
solid copy at 20 wpm.

>maximize the voice of amateur radio in Washington.

I just wish that voice would pay as much attention to the future of ham
radio as its past.

478. Amateur Radio: Elmers List Info and Administrivia

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line

documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM."

As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:
+ http://www.novia.net/~pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *
(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)
see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)
2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:
+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers
on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP)
from the following sites:
+ ftp://ftp.novia.net/customers/pschleck/elmers/
+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/
4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:
+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/
see also news:comp.infosystems.gopher
5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:
listserv@ucsd.edu
and in the BODY (not the Subject) of the message, write:

subscribe radio-info
The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)
You should get an acknowledgement very shortly.
6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:
ftpmail@ftp.novia.net
and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:
mail-server@rtfm.mit.edu
and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject

```
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

John Ackermann AG9V

jra@febo.com
jra@daytonoh.ncr.com
jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am
sure you will agree that its a little late to start building a massive
rapid response, emergency communications system supported by thousands
of people within companies, organizations and serving as volunteers to
provide essential support services.

We are the North American Center For Emergency Communications Inc.
(NACEC), a federally-registered non-profit organization serving North
America since 1992. We have been developing a system that merges many
different technologies to create a unique, high-capacity,
rapidly-deployable solution to the problem of communications outages
and shortages that occur following a large disaster. Our volunteer
network in using the Internet as its communications backbone, is
itself using one of the many technologies employed in NACEC's overall
solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

* arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)
* arrl-nediv-list (Announcements from the director of the ARRL NE division)

To join any or all of the above:

Send a message to:

majordomo@netcom.com

In the body of the message, type:

subscribe list_you_want

Since there appears to be no hope that Netcom will ever improve its mailing list services, w1aw-list has been moved to a server down at ARRL headquarters. See Jeff Bauer's entry for more information if you wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care of that myself.

Thanks again for your support and patience with my w1aw-list over the years. Note that this change will not affect any of the other ham-radio related lists at Netcom.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online

callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

I have been an audio engineer. I have directed media productions involving "Multi-Media" audio, multi-projector, and video. I have been a technical director for TV, program director and producer, as well as an engineer for radio production.

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tucson Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting
tapes (especially Callsign tapes) from the Department of Commerce
National Technical Information Service (NTIS) or wanting other info on
callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise,
really!

My job is currently System Administrator for a large UNIX site so I
know a little bit about day-to-day UNIX operations and UNIX
installation :-) I also have much experience with constructing E-mail
paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software
interfacing and machine control.

UNSUBSCRIBE tenten-l

(10-X International is an amateur radio organization devoted to encouraging the use of the 10 Meter, or 28 MHz, amateur band. They are primarily known for their "10-X" numbers which members exchange during communications on that band.)

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of

the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is
~~~~~~

produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180, fax senders wait for voice prompt.

Maintainer of Advanced Computer Controls (ACC) and Link Mailing Lists

The ACC list has approximately 60 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

Link Communications World-Wide Web Home Page:

USAF MARS Region 2 Packet Manager

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can

download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney University of Technology
Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

The address of the list is aprs-fl@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join aprs-fl".

Florida APRS World-Wide Web Page:

http://www.magg.net/~n2czf/aprs.html

I've been active 24 hours a day on HF and VHF APRS since 1993. I've attempted to make APRS easier for others in the state by doing presentations at hamfests and club meetings. I formed the aprs-fl mailing list thru TAPR and maintain the Florida APRS World-Wide Web Page so that other newcomers can have all the information they need in one place. I'm employed as a 2-way radio technician and attempt to make other peoples "junk" radios available to new amateurs. I'm also interested in 10 GHz and above communications.

State Frequency Coordinator, Texas VHF-FM Society

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10 years. I don't know it all, but through my contacts I can find someone that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.
~~~~~~

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

n1qzs@magrathea.com

http://www.magrathea.com/~ctg/

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available
at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules
and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

Ken Gunton WB6QWF

kenny@erinet.com

Microwave Components World-Wide Web Page:

http://www.erinet.com/kenny/microwave.html

It changes from time to time, so stop back often! Don't see the
component you want? Just call, fax your spec, or e-mail and attach
your drawing or spec for a quick quote at BIG savings.

My company, Techlock Distributing, sells RF and microwave components
of many different types. I own the company, and it's a small, one-man
operation. While I don't sell Ham equipment per se, I have sold some

dividers, etc. to hams for their use.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives,

etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an
Extra class amateur license. I got my first ticket when I was 14 years

old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

* Novice/Tech Instruction
* Packet and Digital Networking
* RACES
* Seminars/Lectures
* SKYWARN

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature
phase shift keyed) modem for the amateur satellite channel. This modem
is implemented totally in software running on a PC with an ordinary
(non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
transceiver bandwidth.

I've made good progress and have put some info up on my web page about
it, including an audio file to show what it sounds like in noise when
the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the
code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

Michael S. Keller AB5EL

71620.447@compuserve.com

Areas of particular knowledge:

* PC-style computers
* Mobile installations (rearranging mobile HF right now)
* Repeaters (after a fashion--building a 1.25m repeater)

R. D. Keys NA4G

Dept. of Crop Science
NCSU
Raleigh, NC 27695-7620

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society

(RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for UNIX jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

Robert A. Kile KG7D

midnight@accessnv.com

A Current list of Dealers and Manufacturers of Amateur Radio Equipment in North America is now available on HR Showcase Amateur Radio WWW. The URL is:

http://www.accessnv.com/hrshow/

The listing will be updated as more come on line. Enjoy!

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Wearable Computing and Personal Imaging

[Editor's Note: Steve is currently a graduate student at the MIT Media Laboratory and has done a considerable amount of research into, and implementation of, wearable, wireless networked computer systems using amateur radio (via a 56kBaud GRAPES radio modem) as the physical layer. He is arguably the Inventor of the "Wearable Computer." You may have read about him in Scientific American, CQ-VHF, or seen him on a recent edition of Scientific American Frontiers on PBS. He is interested in connecting with other serious amateur hobbyists pursuing like or similar technologies. See his World-Wide Web Page above for

more information.]

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"

* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

David Newkirk W9VES

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

Avid SW/MW DX'er for the last 30+ years

My main area of expertise is low-power (under 1 kW) Latin American Broadcasters, but I keep up-to-date on the current trends and events affecting broadcasters world-wide (i.e., I was recently asked about a station engineer who was working at ELBC in Monrovia, Liberia and was able to pass on information that the engineer was currently working in Gabon.) My other keen interest is Clandestine Broadcasters (not pirates).

Though intentional signal jamming isn't as much of a problem as it was during the "cold war," I co-authored a report titled "THE WOODPECKER PROJECT" which was presented at an ITU convention. I still use those skills now and then to DF CB'ers running illegal power, and your odd "bad-ham."

Bruce Perens K6BP

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

PhD Candidate in Adult and Higher Education

Educational Advisor, American Radio Relay League

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation

* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I suspect that I would be classified as a "classic" amateur operator.
While not a proficient homebrewer/RF designer (yet), I pride myself on
the ability to construct equipment from kits, as well as being able to
competently debug and fix the equipment I use - this is a set of
skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America

On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

+ I am an Advanced class operator, working on Extra. I work
+ professionally as a manager of a computer services department in a
+ large hospital system with more than 12 years experience in PC and
+ Host Systems networking, I hold a degree in Electronics Engineering,
+ as well as many hours in Computer Science Engineering. I operated a
+ land-line BBS for 8 years, and now maintain a packet mail drop on
+ 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of
+ North Texas home page on the web:
+
+ http://www.why.net/home/kb5ylg/tcarc/index.html
+
+ and am the 1996 President of the TCARC. I am also the appointed
+ Emergency Coordinator for the City of Azle for Tarrant County RACES.
+
+ I like to give talks to Amateur Radio Clubs, school groups, Scouts,
+ and similar groups, mainly about Amateur Radio topics. Recent
+ presentations I have done include Field Day preparation for clubs,
+ Computers and Ham Radio, Building Your First Dipole. I'm open to
+ presenting other topics as well. I also help local amateurs to prepare
+ their own presentations and talks.
+
+ I am a Baptist minister, and would be delighted to administer a Ham
+ Radio theme wedding! <grin> I would also provide ministerial services
+ for Ham related special events.
+
+ I will also provide free Novice/Tech licensing instruction for groups
+ of 5 or more in the Tarrant/Parker/Wise County region of North Texas.
+ Typically this involves about 18 hours of lecture, and some self study
+ on the parts of the students. I'll do this free for nonprofit
+ endeavors.
+
+ P.S. I monitor 146.98 Boyd repeater while commuting, and you might
+ find me working HF CW just about any time.

+ I'm a software engineer specializing in Macintosh development, and
+ I've been a ham since 1982. I was first licensed at age 14, and I now
+ hold an Extra class license. My expertise is in antenna-building and
+ theory, CW (Morse code), DXing, SWLing, and HF operating practices in
+ general. I also operate mobile in a '96 Ford Ranger pickup. I'd be
+ happy to help any new or aspiring amateur radio operators.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Paul W. Schleck K3FU

pschleck@novia.net

(finger pschleck@novia.net for PGP Public Key)

http://www.novia.net/~pschleck/

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie,
FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/
Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and
John Seney for FAQ maintenance opportunities and the
rec.radio.amateur.* Working Group mailing list). To paraphrase Zack
Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ
management and posting package from Ian Kluft and would be happy to
guide new FAQ authors in its use. The latest version, 3.2pl2, is
available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To
subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly.
To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using
KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.
I attempted a literature survey as well as some software simulations
of the protocol (with varying degrees of success). I would welcome any
opportunities to improve on my work, find out about any actual MACA
implementations, share information, and build on my bibliography
(available on request). More information about MACA may be obtained
from:

ftp://ftp.ucsd.edu/hamradio/packet/arrlcnc/1990/

Don Simpson KO4TA

ko4ta@mindspring.com

Net Control, Best of 75 Net

Meets every Saturday evening at 1930 Eastern Time at 3.975 MHz (75 Meter HF Amateur Radio). Guests via the KO4TA phone patch usually arrive about 2100 Eastern Time.

The purpose of this net is to bring the Amateur Celebrity to the Amateur for an opportunity to ask and answer questions. Past guests have included Barry Goldwater, Wayne Green, Hap Holley, Fred Maia, and Bill Pasternak.

The 3.975 MHz frequency is also home of the Friday Night Trader's Net at 1930 EST as well as good-natured discussion in general almost any other time.

* 160 Meters
* MARS
* RFI
* RF Safety
* VHF/UHF

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

For hams that are interested and live in my area, they are welcome to login to IBBS. IBBS is a full-time UNIX-based computer that is dedicated to ham radio. I carry a full rec.radio.* news feed and E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be willing to answer any question a new person to the hobby has. If I don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Dave Stine WA2JTA/6

I am a comunications sergeant for the U.S. Army. My particular specialty is tactical HF radio. Our primary means of communication is with 20 Watt manpackable radios with a data burst device.

I have experience with both short and long-haul HF communications and am willing to give whatever (publicly-available) information I can about antenna construction and basic radiowave propagation.

I have experience in tactical (field-expedient) antennas as well as basic radio wave propagation. I also have experience with larger less tactical antennas such as the doublet and NIVIS. Most of the antennas that I deal with are large-half or quarter-wave in length for frequencies ranging from 2 to 29 MHz.

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by

other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

"Why don't you just make 10 louder?"
(Spinal Tap)
- --

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========

This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify.

For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

487. Difficult DX to the west of US

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-06 00:00:00 UTC
From: rmander@mbox.4net.it
Message-ID: <5aqn38$ck4@server-b.cs.interbusiness.it>
Source record: 207826

Hello all ,
I live in northern Italy, and have a 3 el beam about 20 meters high.I have always wondered why some areas of the US (AZ, UT, NM ,CO , NV) are seldom heard here in my QTH on the HF bands . I have thought to several possibilities :
a) My antenna setup is poor (althoug this may not be the question as farthest station (CA, WA) are more easily workable)
b) Those areas have bad soil features (e.g. dryness) that make difficult the beams refletions needed for a DX on HF bands.
c) Those areas have low population , thus the percentage of ham radio is much lower (as a matter of fact when I came there on vacation I noticed that)

Thanks in advance for reading this message
73 , Roberto
IK4JQW (Ferrara , Italy)

We've done a full review of the IC-756 for publication in the March issue
of our mag -- and it's excellent value for money and works astoundingly
well. TX audio is surprisingly BBC -- needs a few more highs (heck of a
surprise for an Icom!)

I believe this scope is one that had a separate power supply chassis. It provided B+,filaments ,etc. It should have been provided with the scope. Tek made a couple of tube scopes with separate p.s. because they used so much power and space. I suggest that you put your money and effort into a solid-state scope like a 465.

>Why am I tested in RTTY theory? I am not >required< to use it.

Nor are you required to answer any of the RTTY questions correctly
in order to pass the exam element containing them.

>Why am I tested on satellite theory. I'm not going to use it.

Nor are you required to answer any of the satellite questions
correctly in order to pass the exam element containing them.

It is only the Morse receiving speed tests which require you to
answer 7 out of 10 questions correctly in order to pass the element.
No other encoding method, operating method, theory item, or regulatory
factor has that special treatment. All of the other elements are
composites. You can totally ignore the questions about some mode
in which you are not interested and still pass the exam element.

I'm posting this message in case my E-mail didn't reach everyone for
some reason or another (certainly not due to outdated E-mail
addresses, as everyone kept me updated, right? :-).

Remember, if I don't hear a positive confirmation from you by March
3rd, I will assume your entry is inactive and I will delete it.
Apologies to the rest of the net for this closed-circuit. As I noted
above, I promise I won't bother the net again for another 2 years :-).

Oh sure, and such interesting "conversations" they are too. Not! If all you share with another operator are procedural signals pertaining to the mechanics of contact, you can technically make a contact, but you can't really say anything to the other person, or understand anything he says to you, outside the context of those pure mechanics. Other than for racking up score in a game, what's the point? You might as well dial the phone randomly and then hang up when someone answers.

>-CTCSS OPENS WITHOUT CTCSS SIGNAL

Can you be more specific? The FT50 must have the FT12 keypad (112
channel, DVR, etc, not standard) to DECODE CTCSS. And the screeen must
say T SQ not just T. T is Transmit PL, SQ is rx PL.

>-SPEAKER LCD SYMBOL DOES NOT SHOW WHEN YOU RECEIVE A SIGNAL

The newer radios state that in the manuak, The speaker is only going
to go off when you hit the squelch button. It took more battery power,
so it was dropped.

>ANY MODS FOR SENSITIVITY ALIGNMENT VIA THE KEYPAD?

It's about as sensative as it's gonna be.. you can adjust the squelch
under a menu setting..

If all you're talking about is using a modern rig with 1KW of power
into a 6-element beam at 200 feet, you're right. However, I suspect
that a large number of QRPers could tell you what the point is --
making the contact under trying or difficult circumstances. Part of
those difficult circumstances is attempting to communicate with people
who, for instance, don't speak English.

Everyone has different goals in amateur radio. Your goal is to have
to computers sit and communicate all day while you do something else.
If that's what interests you, that's fine. It doesn't interest me in
the slightest.

Ok, since no one can decide on the best way to compile 2m repeater lists,
I wanted to ask everyone to send in thier submissions. My QTH is eastern
tennessee EM85as. I will start a web page list and if you care to add a
repeater let me know. Please email me directly as I only check the
newsgroups once a week or so. This list is for posting on the web only.
The information will not be sold etc.
Also, if you care to submit local simplex freqs please feel free to do so.
This list will be as good or bad as people make it. Thanks.

Check out http://www.tapr.org for info on amateur SS.

TAPR is really doing some great stuff with the recently
issued STA, allowing more experimenter-friendly use of
amateur SS.

I am currently running two 115 kbaud FH SS modems
on 900 MHz. These are made by FreeWave. TAPR
is using "custom" versions of these as part of their studies.

There IS amateur radio SS activity out there. But you'd
never know it based on all the code/nocode/license wars
typical of this newsgroup.

What rate? Most, as with the W2 buro, are run by volunteers. The only cost involved is for the postage needed to mail the cards to the subscribers. Are you suggesting that the sorters now do this on a cost per hour basis?? COOOOOL. It takes me, on averge, 20 hours each month to sort 3000 cards. Each card being handled at least twice, once in the primary sort, then in the secondary sort. From there it goes to the letter managers who then sort per total callsign. What should they charge???

BTW, that's 20 hours here at th bottom of the cycle. Can't wait till it starts going up.

How much would YOU pay for an essentially free service??

> indicated clearly that the old call sign would be "vacated".
>
> Anyways, why would anyone want to use their old call instead of the new
> one? Why did they change in the first place?

Hmmm ... didn't the FCC say that you may use your new call
if you learn about it via Internet? I guess the operative word is
"MAY". They didn't say "must" or "should", they said "may".
Once you get notified in the mail, you "MUST" but until then,
well ...

One reason is to allow users of a packet BBS time to find out
about a new callsign before a change is made. For example,
if a BBS NO8M (my old call) was to change to my new call
immediately, many users, especially those less familiar with
the vanity call program, may find themselves locked out and
confused. Other options are not appropriate ... sending a
message to all the users (some of which only check in once a
week ... and there are 250 or so users), sending a flood
bulletin is a waste of spectrum (why bother x-hundred BBSs
for one user?). The alias is already in use, setting that to NO8M
is not an option. I have users all over the world (many use the
HF port from sailboats in the Caribbean, South America, etc.).
Getting information to those friends sometimes requires a few
days.

Really, you are correct. I should do one or the other ... I should
use my new callsign for everything after I learn about it on the
Internet and until my call comes in the mail. Or ... I should
ignore the Internet and use my old callsign until advised by
mail. I suspect, though, that the FCC has a whole pile of things
to worry about besides an interpretation of the word "may".

Having been advised by mail, I remain, only, W8IZ.

Look at the ARRL web page. The FCC has extended the compliance date to Jan 1998. The exams are being changed to add questions showing how to comply. The ARRL web also has the FCC report where they measured several amateur radio stations and used that data to determine NOT to exempt amateur radio stations.

In summary, most mobile installations running over 50 watts were non compliant. Several indoor antennas and low dipoles were non compliant and verticals where people could walk close to the base were non compliant. Beams on towers above 35 feet with high power were all compliant as were most antennas when you could locate them over 35 feet high or away from "public" areas where people might come in close contact with the antennas. If you can hold a fluorescent light in your hand and light it by holding it close to an antenna without using over a 6 foot step ladder, you may not comply. The ends of antennas (where voltage is very high) is where most of the tested stations had problems as many were too close to the ground.

It is probably a good law because you or your family are the ones affected the most by poor installations and high electric fields and getting educated on what is good and what is not should help to allow you to make better informed decisions about your station power, frequencies, and antennas. Unfortunately, enforcement will probably be by people who think they may be harmed by your antenna, and that Is NOT good.

>
>The Commercial Interest have no Interest in HF. HF is not the Problem VHF
>and UHF our where we will lose Spectrum, so I guess this whole thing about
>CW is a waste of time.

Exactly! I posted a message a while back in regards to this. CW isn't going to make any difference if the FCC desides to sell off frequencies to the highest bidder. They're only interested in VHF and UHF, unless they want to put up a shortwave broadcast station. Even at that, there is plenty of other HF spectrum that isn't open to amateurs on HF for shortwave broadcasts.

Let's face it: Ham radio is a dying hobby, but not for any of the reasons anyone has mentioned so far. Amateur radio was once the ground for new technologies to be born from. That's changed over the years. Not because hams have gotten lazy, not because they're only interested in rag chewing, chasing DX, or exchanging signal and weather reports on a QSO. The main reason is money. As new technologies in any field are researched and developed, it takes more money and more skilled people to implement them. The average ham doesn't have hundreds of thousands or even millions of dollars that is needed to research and discover such new ideas. It's simply become too complex and expensive to do research and developement.

The difference in the Mods are as follows:

The yellow wire mod will open up the recieve from 140 - 165 Mhz. This is acomplished by using the 2 meter bandpass filter. The rig will loose most of its sensitivity in the 60 - 140 Mhz Range. (6meters is not affected). By cutting the yellow wire you are leaving the 2 meter bandpass filter in place of the genral VHF bandpass filter.

Removing the caps mod actully corrects the existing badpass filter which now cuts out at 140 MHz to keep pager intermod out of the Broadcast FM.

By doing the caps mod opposd to the wire mod you get your full 60 - 180 Mhz coverage and have to live with some intermod in the FM BC and aviation bands (108 - 136).

The yellow wire mod is very easy and quick to get the VHF public service bands 148 - 165 Hhz but will kill most sensitivity in the FM BC and aircraft bands.

I hope this answers your questions

73,
Bill WD2AEV

Hi Andy. Vince Biancomano is just as firmly convinced of quite the
opposite: that the ARRL has made up it's mind to drop the code! I suspect
the truth lies somewhere in between, and that the jury is still out while
the ARRL continues to try to determine what's best for the future of
amateur radio. I think they realize that whatever decision they make will
be enormously unpopular.

So what's the problem? Having the computer in the center console is
probably great for you in the grand scheme of things. Mount the radios
in or under the dash, run your coax off to the side and down the side
panel to the rear for the antenna, or to the fron cowl, or wherever.
Make sure you use good coax, and good connectors for proper shielding.
If this doesn't get it, form a shield around the computer with aluminum
foil and if it is a problem do the same with the wires running to it.
Ought to work just fine.

There is no doubt they will go into effect. But, the effectivity date
has been put off one year, now 1 January 1998.

Yeah. I can tell this when I visit the local community college computer
show each month and see all the morons who pay $5 to get in to buy
components to "assemble" their computers.

Time out time out. 1st..I salute you on your initative to grow and better yourself. Hard work and dedication have made this country what it is today..not by giving in to the piss and moaners.

I do not slight the no coders..I grumble at those who persist in fighting windmills while the battles ar being lost around them. Notice, the majority of no coders (primarily Catl and his toadie Len) never EVER go to bat for the VHF+ bands. Whenever challenged, the proudly run up their little battle flag RED HERRING..STRAWMAN..blah blah BLAH!!!!

While VHF+ spectrum is being lost daily to commercial interests the only thing that matters in NOCODE HF..WHY??? Because as far as the nocoders are convcerned, they have given up. There is no battle there..sell 'em off WE DEMAND HF..IT'S OUR RIGHT. Why should you, who worked hard for your PRIVILEGES be allowed to use HF when WE who ar so superior to YOU can not. WE WANT THEM, WE DEMAND THEM waaaaa waaaaa piss moan.

Like I said, we should have a new licence class the WELFARE class. Don;'t need tests don't need knowledge, just a few $$$$ and bingo instant on.

People get out what they put in. Put in nothing, get it right back at ya. Put in time, dedication...get rewarded.

I know this goes against Lennart's grain...see he alreday got his and now begrudges anyone else getting their share. As far as Carl and his group.wellll whay more can I say. He's got his aganeda all planned out and no one with a license need apply, just engineering degree.

Just my thoughts and opinions

526. Advice on Dual Band HT's

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-07 00:00:00 UTC
From: chix0006@maroon.tc.umn.edu
Message-ID: <5au94v$ci2@epx.cis.umn.edu>
Source record: 207615

I just recently got my Tech Plus license, and am interested in getting a dual band HT. Since I am new to amateur radio, I am not sure what I should look for in a radio. After perusing through magazines and catalogs, I have found several that might fit my needs. I was wondering if people could give me some info and pros and cons of each and their experiences. The HT's I am looking at are:

ADI AT-600
Alinco DJ-G5
Icom W-32
Kenwood TH-79
Yaeseu FT-50/51

Any others I should look at? Where should I buy from? What are some good books on using HT's and repeaters?

Thanks in advance for you responses!

Bernard Chi, KBOYYB

s'cuz me!, I thought the frequencies mentioned were not in the novice
portion of the band... since I didn't keep a copy of the original note,
maybe you are right, but I seem to recall they were in the voice
segments of 80m and 20m a less than desirable portion,true ,
but still the voice segment.
and there is plenty of area around 14.313 and 38whatever.
When you get to 13-20 wpm it won't be a problem...

The best document for all of this is Part 97. You should have a current copy available after you become an amateur, and it is a good idea to have one while studying for your license. The power limitations are spelled out in 97.313. THe most important section of 97.313 is section (a) which says, "An amateur station must use the *minimum* transmitter power necessary to carry out the desired communications." Unfortunately, few amateurs obey it.

For license classes other than Novice, the *maximum* permissable power is 1.5 kW. But when operating in the Novice subbands of HF, the maximum permissable power for any amateur station is 200 watts. Novices are additionally restricted to 25 watts on the 1.25m band, and to 5 watts on the 23cm band. Licensees holding licenses other than Novice are not bound by these latter limits when operating on 1.25m or 23cm. They may use the amateur maximum of 1.5 kW on those frequencies if necessary to carry out communications.

There are additional restrictions on amateur maximum power levels in certain geographic areas. In the range 7.050 MHz to 7.075 MHz, amateurs in ITU Regions 1 and 3 are limited to 200 watts. When operating on 70 cm within a certain distance of certain military facilities, amateurs are limited to 50 watts unless they have written permission of the base frequency coordinator to run more. And within 241 km of White Sands Missile Range, no amateur station may run more than 50 watts on the 33 cm band.

From ARRL Headquarters
Newington CT January 7, 1997
To all radio amateurs

SB QST ARL ARLB001
ARLB001 New Section Managers

Mike Siegel, KI6PR, of Merced, California, has resigned as San
Joaquin Valley section manager, effective January 1, 1997, for
health reasons and to spend more time with his family. Assistant
Section Manager Don Costello, AB6TA, also of Merced, has been named
to replace him. Costello also holds an appointment as a public
information coordinator. Siegel, who became SJV section manager in
January 1992, will serve as an assistant section manager.

A new section manager has been appointed to fill a vacancy in Idaho.
The new SM is Mike Langrell, AA7VR, of Boise.

Remove the passenger seat and replace with a 19" rack.

Seriously, I'm with the other poster who suggested that
you go ahead and mount the radios wherever you can, and
if problems occur, deal with them.

You could mount an HF rig in the space where the glove box is. It is
easily removed. A small VHF tranceiver might fit at a slant just
in front of the console. Instead of using rigid mounting brackets, use
two pieces of stiff antenna wire on each side of the mounting holes of
the rig and run them down to the front screws that hold down the console.
That worked pretty well for me. I've not had any problems with my
on-board computer (yet).

Good Luck,
Tom Hogerty, KC1J
1988 Trooper Owner :-)

Thanks Bruce.
No intentions of stopping here. My father is a general and I'm bound and determined to make at least that level while he's alive...AND I'm having a great time doing it. I don't want to be given anything, it's not worth the paper it's written on. The no-code is already a give-away compared to what the tests used to be like.

Look for me on the novice band, I won't be there due to licensing limitations long.

Thanks again for your support.

It does tend to make someone wonder sometimes. There's an entire world that's open to no-coders in the frequencies above 30 Mhz. This is where the spectrum battles will take place. This is where the new technologies in communication will be developed. But the biggest thing is that you don't have to know code to use these frequencies! Maybe some people want to have their cake and eat it too.

Cause transfert d'activite, particulier vend materiel
radio/telecommunications quasiment neuf et en excellent etat :

1) terminal de communications TONO 550 , commande par microprocesseur,
permettant la reception automatique du code Morse (CW)
et du RTTY (en Baudot et ASCII), sortie Video VHF et composite,
interface imprimante compatible Centronics, moniteur BF incorpore,
fonction emission permettant d'envoyer un message prepare sur l'ecran
et memorisable
prix : 750 F (valeur 2500 F)
2) antenne SONY AN-1 large bande PO/GO/OC 150kHz-30.000kHz avec
ampli RF integre a transistor a effet de champ a large gamme dynamique
et faible bruit. Taille reduite et alimentation CC
prix : 250 F (valeur 600 F)
3) divers autres materiels de reception radio large bande VHF/UHF

Materiels vendus en emballage d'origine et avec documentation.
Visible en region parisienne

Humm, Carl, this sounds very much like you have some moisture creeping problems. In the morning, when you start up your car, there will be condensated moisture from the night. Then, by and by, the engine clears the moisture paths by warming the space under the hood... By the way, when hering you overt the repeater, I hardly notice any of the sound you describe... at least not, when hearing you on real cold days. Which also would make sense, if it is some condensed moisture that gives you the problem.

I guess a series resonance between the alternator and ground, tuned to your favorite 2 m frequency should cure the whine, as it will make an effective short for that frequency, but not short the alternator. And as your whine is motor speed dependent, it very possibly will be the alternator....

What worries me most about this is that the enforcement will likely be via technically ignorant individuals, the news media, and lawsuits.

Hey...if the gov't has set standards it must be dangerous, right? And we don't something in our neighborhood that's gonna give all our kids cancer, do we? Don't bother me with the facts, my mind is made up. If I don't understand it, it must be bad and dangerous.

Wait till one of your neighbors gets cancer and finds out that you've been 'beaming microwaves' into his house (an article in the local paper used that phrase in describing the fears of someone who objected to a cellular tower a half-mile from her house). Can you afford to defend yourself against a lawsuit? I can't. Can you afford to have RF field measurements made by a 'professional' to prove that you're in compliance? You'll probably end up having to if someone challenges your self-analysis. I fear that the ARRL's "don't worry it's not as bad as it looks" view is a bit naive.

Let's face it...most of the public view us nuisances. We put up ugly antennas that attract lightning, lower property values, and screw up their shiny and expensive but cheaply made electronic toys and phones. And now they find out that we could (and so probably are) beaming dangerous radio waves around the neighborhood. This just confirms their suspicions and gives them more ammunition.

My view (admitedly pessimistic) is that this could turn out to be more of a threat to amateur radio than anything else. Forget the ever more pervasive and restrictive CC&R's, the Little LEO's, and the spectrum auctions. When the news media get wind of this we will all be targets. Even if we're all in compliance we'll still have to defend ourselves. And how many of us can afford to do that, even if we're right?

I'm not saying that there shouldn't be standards. I do, however, think that this whole thing could have been better done. It seems that there was a rush to judgement on the FCC's part. In spite of the postponement, the damage has been done. In my more paranoid moments, I wonder what precipitated it all????

I hope I'm wrong about all this...

I had a Tek 555 which I belive was a dual beam version of the 551 and it had a seperate PS that was connected via a 16 pin connector. I doubt the scope is usable with out it. I might have a schematic if you need to figure out the pinouts.

From Tim;
The TEK 551 (dual-beam) should have a *seperate* power-supply unit, which
is connected via a cable to that 16-way plug on the 'scope. The EHT for
the CRT is generated inside the scope itself, but the other voltages are
provided by the power-unit. If you don't have this, then it's :-(
unless you can find one.
regards

If this post has been sent to wrong place I am very sorry

Could anyone explain to me what is packet radio, amateur radio and the difference between them.

What sort of equipment do I need

Does it work worldwide or do I have to be within a distance of (say a tower or station)

Anything extra would be very valuable

pls drop me email direct
Thanks in advance

waheeb

The reality is that the voice of ham radio to the FCC is, by
default, the ARRL. No other entity or individual has built
up the long term rapport with the FCC that the ARRL has.
That is not unlike many other areas of interest. Does the
AMA speak for ALL doctors? No, but it gets the lion's share
of attention. Ditto the various bar associations for attornies, etc.

> too).

I beg to differ ... I spoke with the FCC in Washington AT LENGTH before I left the states to go crusing in Mexico and other Central American countries, I was told quite specifically that the FCC had NO jurisdiction outside of US territory. I had to have a US mailing address ... they would not even issue a license if a US Documented vessel were the only residence ... without a "station location" in US territory, they would not issue a license ... so to change address and renew, I had to use a relative's address in another state, even though I have never set foot there nor do I ever plan to ...

Anyway, the FCC folks (I talked to several, all the way up the chain) wer QUITE adamant that they have NO authority outside of US territorial limits.

> While you were operating as XE2/WA6VSE, were you operating under Mexican
> authority?

Yes ... the Mexican equivalent of the FCC issues (or at least at that time did, it may have changed since I came back to the states) licenses to foreign operators as XE(n)/Home_country_call ...

> If you were a tech in the US, what class of license did you
> operate under in Mexico? In that Mexican class, were you permitted 15m
> voice privileges?

Mexico only has ONE class ... radio amateur ... any valid US license (even a novice) will get you a Mexican reciprocal license with FULL amateur privs on all bands ...they also have no "sub-bands" they rely on gentlemen's agreements to partition spectrum use ... they often use voice below the US voice bands to avoid the rude gringos ...

The Mexican ops were UNIVERSALLY polite, friendly, and helpful ... more than I can say for a significant portion of American hams ...

>
> (Since you were licensed in '74 as WA6SVE, and I was licensed in '76 as
> WA6QIJ, why is your callsign out of sequential order?)

Ask the FCC ... I didn't question the callsign they gave me ...

I can speak best for HF, where your biggest problem will usually be
near fields. Use the nf.exe (near field modelling program) to model
your station based on the frequencies, duty cycles (modes) and power
levels you hope to use. Do *not* use the fluorescent lamp test
suggested in another post. Once you have modeled your station and
determined compliance, (perhaps you will need to restrict certain
modes, operate at certain duty cycles, decrease power levels at
cetains frequencies etc.), you will then have met FCC requirements for
performing a routine evaluation. I have not seen any simplified
checklists that are designed to make this easier, but they will
surely become available as the year progresses; to that, I will
caution that, as with the "fluorescent lamp test", you should ensure
that unrealistically high safety margins are not built in, which
could essentially prohibit your operation unless you are on 3 acres of
land in the country. Actually, you can make an indoor dipole comply at
100W if it is resonant and near controlled envuronments only. NF.EXE
is an excellent near field modeling program available by following the
ARRL software links, and should be all you need to meet the letter of
the FCC requirement using such modeling. You can also pay a consultant
$$$ to make physical measurements or know people who will do it for
free, but the simplest and fastest, and the only practical method of
considering all the variables involved with hams who operate at
several frequencies in more than one mode etc. is through computer
modeling. To run nf.exe, you may want to use a fairly fast computer;
x86 series will need a math coprocessor (nice to use your computer for
actual calculations instead of wordprocessing ;)) Email me if you
cannot find nf.exe.

>the hatch.

I don't like glass mounts, and wanted something that would be high on the vehicle.
On my Nissan Pathfinder, I installed an aftermarket luggage rack on the roof. On one of the back struts of the luggage rack, I installed a mount which handles the 3/8" x 24 threaded antennas, for which I had to drill two holes in the luggage rack. I'm very confident that, when I sell the Pathfinder, two additional small black bolts in luggage rack (it is black) will not be noticed at all. Since it is so high and in the clear, my 18" tall 2 meter/440 antenna does a great job (while still tolerating the parking deck I use daily). For extended trips, I have a 30" or so 2 meter/440 antenna (5/8 wave on 2 meters) which allows my 50 watt Icom IC2340H to hit the distant repeaters.
BTW, the coax is routed into the cabin via the back hatch, and under the carpet to the front of the vehicle.

trynor@nbnet.nb.ca (Don Trynor)
shared these priceless pearls of wisdom:

->- Distance: These individuals are within simplex distance of each other,

Well, I can't speak to the Canadian rules, but in the lower 48, there is a rule that says that you have to use the "minimum power necessary" for communications. Every now and again, we will use the repeater when we are within simplex-shout, but to do it on an everyday basis violates the letter and spirit of the law.

-> They aren't breaking the law, but I feel the quality

Yes, they are (USA).

->the repeater sounds like a CB set and I want it to stop. Those who are the
->culprits don't even understand that it MIGHT be them.

To paraphrase an old Doonsebury cartoon, "There ain't no way to be polite to a water buffalo, Shorty." Telephone the persons who are abusing the privilege, tell them that you want the "stuff" stopped, and are willing to turn the repeater off when you hear what you don't want. And then do it.

Thanks for the information on the nf.exe program. I was especially concerned since I live on a lot in the city, so I was especially concerned. The latest issue of QST says that the ARRL is trying to implement more workable guidelines. I'd still like to knwo how the FCC plans to enforce this when they can't seem to enforce anything else.

Not so ... I was with Mexican territorial jursidiction ... there, for sure the FCC has not authority ... Mexico is, in fact, a soverign nation ... and as such regulates radio within its own borders to the exclusion of all outside authority.

Besides, as I said, the FCC officials were quite clear that they had no authority outside of US territory ... even though the boat was US documented ... I specifically pressed this point with several levels of officials to make sure they all gave the same answers ... I even tried to prod them into saying they did have authority on the high seas, and they basically said "read our lips ... outside of US territory we have no jurisdiction."

IMO, there is not much different between idle chatter, whether it is
on CB, on 75/80 m or on 2 m repeaters. Over here, the 2 m operators at
least identify themselves regularly. Unless the discussion clearly
violates the regulations, it is not a good idea to start to regulate
the contents of the discussion, it only creates bad feelings.

>- Usage: The individuals each will tie the repeater up at least 2-3 hours
> per day - ALL DAY (they don't work).

Are there other users that would like to use the repeater during these
long discussions ? If there aren't, let the discussion continue. If
there are other users, adopt some sharing principles. Over here, it is
an accepted practice to allow for a break, call someone and QSY
somewhere else and then let the long discussion continue on the
repeater. When such breaks are frequent, the participants sooner or
later realize that someone else might also want to use the repeater
and end the discussion or QSY to a simplex frequency.

It is very hard to tell people to stay away from the repeater, if no
one else would want to use it.

How much delay do you have between the carrier drop and the courtesy
tone ? A 1-2 s delay is quite unpleasent in heated debates :-). A
short 45 - 60 s timeout will effectively cut long monologues.

>- Courtesy: Can't get a word in edgewise sometimes when the jaws get going.
>
>- Distance: These individuals are within simplex distance of each other, but
> *prefer* to use the repeater so that someone else can join in.

Use a loud courtesy tone, the mobile users prefere it, but it is
unpleasent in a quiet environment at home. Use long delays between
carrier drop and courtesy tone, use short timeouts etc. You could even
make these parameters depend of the time of the day. These things do
not very much affect short QSOs, but it might more pleasent to have
long QSOs on simplex without courtesy delays and tones and timeouts.

>Has anyone else had a similar problem? If so, any ideas on a diplomatic fix?

Make shure that there are also other, more interesting, traffic on the repeater. Then it is much harder to take it over for hours.

NOT TRUE. I have written off nothing as a no-code. I am taking my 5wpm on the 12th and used the no-code as a stepping stone. DO NOT lump all of us together. I have NO intention of being a no-code long! I also have never been on the side of abolishing the code.

I am proud of my license. I have earned it. I intend to earn more.

579. Alternator whine from hell, HELP

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-07 00:00:00 UTC
From: cjs9@cornell.edu
Message-ID: <5atoud$6b5@newsstand.cit.cornell.edu>
Source record: 207695

I have a 1991 Ford Explorer and have reciently developed an intermintent whine on the output of my Kenwood TM 732 , both on 2 meters and 70 Cm. I have the factory filters from Kenwood and the unit is tied directly to the battery. I use a mag mount antenna, and have even installed a rf choke on it, no luck. The noise varies with engine speed, but is intermintent. It seems to be more prevalent when first starting up in the morning and soon dissappears after the first few min of transmission.

I have tried additional filters on both the hot and ground lines with no avail. Anyone got any ideas?
If so please email me at cjs9@cornell.edu

I am looking for extra filters for wifes Rig.

it has a filter in switch postion 3 for CW and 2 for SSB now.

I have now manual for radio so not sure of standard filter numbers.

>Has anyone read QST in regards to the Report and Order for amateurs to >conduct safety tests for RF exposure? (Nov. '96, page 75).

The January issue of QST has a 3-page article that explains the rules in more detail.

>I was just wondering if anyone feels that these rules will come to >materialize, and if so, how they'll affect hams.

The FCC just extended the implementation date by 1 year for the Amateur Radio service, in response to an ARRL petition. This will give the FCC and amateurs time to develop the necessary methods to easily evaluate most stations. The FCC also wanted to take more time to consider a large number of Petitions for Reconsideration (including some from ARRL) to both rescind the rules altogether and to fine tune them a bit in some cases. (See the sidebar in the January QST article for more info.)

Overall, the impact on most hams will be small; most hams are already in compliance with the maximum permissible exposures permitted by the regulations.

>What kind of "safety tests" will a ham >have to perform in order to >comply?

The FCC is giving hams a lot of latitude in how to determine compliance. The FCC envisions tables that will give compliance distances for different antenna types vs power, both for "worst-case" situations and for real antennas over real ground. The ARRL has been supplying the FCC with NEC4-derived tables.

>My biggest question is how does the FCC plan to enforce such new >regulations when they say they don't have the resources to catch >violators such as the ones on 14.313 Mhz. and 3.8945 Mhz.

The FCC is relying on the demonstrated self-compliance of most Amateur Radio operators, 14.313 notwithstanding. I, for one, will do what the rules require because I want to uphold the overall reputation that hams have with the FCC.

>Anyone have any thoughts on this?

Carl, it is likely that the whine is more prevalent at certain times
because the alternator is actviely charging the system at those times. I've
been told that replacing the alternator helps in extreme situations.

Hi Thomas,
It's not actually a regulation but here is what I have.

It's PRB-1

Memorandum Opinion and Order in PRB-1

Before the
Federal Communications Commission FCC 85-506
Washington, DC 20554 36149

In the Matter of)
)
Federal preemption of state and) PRB-1
local regulations pertaining)
to Amateur radio facilities.)

MEMORANDUM OPINION AND ORDER

Adopted: September 16, 1985 ; Released: September 19,
1985

By the Commission: Commissioner Rivera not participating.

Background

1. On July 16, 1984, the American Radio Relay League, Inc (ARRL)
filed a
Request for Issuance of a Declaratory Ruling asking us to delineate the
limitations of local zoning and other local and state regulatory
authority over
Federally-licensed radio facilities. Specifically, the ARRL wanted an
explicit
statement that would preempt all local ordinances which provably
preclude or
significantly inhibit effective reliable amateur radio communications.
The ARRL
acknowledges that local authorities can regulate amateur installations
to insure
the safety and health of persons in the community, but believes that
those
regulations cannot be so restrictive that they preclude effective
amateur
communications.
2. Interested parties were advised that they could file comments in
the
matter.\fn 1/ With extension, comments were due on or before December

26,
1984,\fn 2/ with reply comments due on or before January 25, 1985 \fn 3/
Over
sixteen hundred comments were filed.

Local Ordinances

3. Conflicts between amateur operators regarding radio antennas and
local
authorities regarding restrictive ordinances are common. The amateur
operator
is governed by the regulations contained in Part 97 of our rules. Those
rules
do not limit the height of an amateur antenna but they require, for
aviation
safety reasons, that certain FAA notification and FCC approval
procedures must
be followed for antennas which exceed 200 feet in height above ground
level or
antennas which are to be erected near airports. Thus, under FCC rules
some
antenna support structures require obstruction marking and lighting. On
the
other hand, local municipalities or governing bodies frequently enact
regulations limiting antennas and their support structures in height and
location, e.g. to side or rear yards, for health, safety or aesthetic
considerations. These limiting regulations can result in conflict
because the
effectiveness of the communications that emanate from an amateur radio
station
are directly dependent upon the location and the height of the antenna.
Amateur
operators maintain that they are precluded from operating in certain
bands
allocated for their use if the height of their antennas is limited by a
local
ordinance.
4. Examples of restrictive local ordinances were submitted by
several
amateur operators in this proceeding. Stanley J. Cichy, San Diego,
California,
noted that in San Diego amateur radio antennas come under a structures
ruling
which limits building heights to 30 feet. Thus, antennas there are also
limited
to 30 feet. Alexander Vrenios, Mundelein, Illinois wrote that an
ordinance or
the Village of Mundelein provides that an antenna must be a distance
from the
property line that is equal to one and one-half times its height. In
his case,

he is limited to an antenna tower for his amateur station just over 53 feet in
height.
5. John C. Chapman, an amateur living in Bloomington, Minnesota, commented
that he was not able to obtain a building permit to install an amateur radio
antenna exceeding 35 feet in height because the Bloomington city ordinance
restricted "structures" heights to 35 feet. Mr. Chapman said that the
ordinance, when written, undoubtedly applied to buildings but was now being
applied to antennas in the absence of a specific ordinance regulating them.
There were two options open to him if he wanted to engage in amateur
communications. He could request a variance to the ordinance by way of hearing
before the City Council, or he could obtain affidavits from his neighbors
swearing that they had no objection to the proposed antenna installation. He
got the building permit after obtaining the cooperation of his neighbors. His
concern, however, is that he had to get permission from several people before he
could effectively engage radio communications for which he had a valid FCC
amateur license.
6. In addition to height restrictions, other limits are enacted by local
jurisdictions--anti-climb devices on towers or fences around them; minimum
distances from high voltage power lines; minimum distances of towers from
property lines; and regulations pertaining to the structural soundness of the
antenna installation. By and large, amateurs do not find these safety
precautions objectionable. What they do object to are the sometimes
prohibitive, non-refundable application filing fees to obtain a permit to erect
an antenna installation and those provisions in ordinances which regulate
antennas for purely aesthetic reasons. The amateurs contend, almost
universally, that "beauty is in the eye of the beholder." They assert that an
antenna installation is not more aesthetically displeasing than other objects
that people keep on their property, e.g. motor homes, trailers, pick-up trucks,
solar collectors and gardening equipment.

Restrictive Covenants

7. Amateur operators also oppose restrictions on their amateur operations which are contained in the deeds for their homes or in their apartment leases. Since these restrictive covenants are contractual agreements between private parties, they are not generally a matter of concern to the Commission. However, since some amateurs who commented in this proceeding provided us with examples of restrictive covenants, they are included for information Mr. Eugene O. Thomas of Hollister, California included in his comments an extract of the Declaration of Covenants and Restrictions for Ridgemark Estates, County of San Benito, State of California. It provides:

No antenna for transmission or reception of radio signals shall be erected outdoors for use by any dwelling unit except upon approval of the Directors. No radio or television signals or any other form of electromagnetic radiation shall be permitted to originate from any lot which may unreasonably interfere with the reception of television or radio signals upon any other lot.

Marshall Wilson, Jr. provided a copy of the restrictive covenant contained in deeds for the Bell Martin Addition #2, Irving, Texas. It is binding upon all of the owners or purchasers of the lots in the said addition, his or their heirs, executors, administrators or assigns. It reads:

No antenna or tower shall be erected upon any lot for the purposes of radio operations.

William J. Hamilton resides in an apartment building in Gladstone, Missouri. He cites a clause in his lease prohibiting the erection of an antenna. He states that he has been forced to give up operation amateur radio equipment except a hand-held 2 meter (144-148 MHz) radio transceiver. He maintains that he should not be penalized just because he lives in an apartment. Other restrictive covenants are less global in scope than those cited above.

For example, Robert Webb purchased a home in Houston, Texas. His deed restriction prohibited "transmitting or receiving antennas extending above the roof line."

8. Amateur operators generally oppose restrictive covenants for several reasons. They maintain that such restrictions limit the places that they can reside if they want to pursue their hobby of amateur radio. Some state that they impinge on First Amendment rights of speech. Others believe that a constitutional right is being abridged because, in their view, everyone has a right to access the airwaves regardless of where they live.

9. The contrary belief held by housing subdivision communities and condominium or homeowner's associations is that amateur radio installations constitute safety hazards, cause interference to other electronic equipment which may be operated in the home (television, radio, stereos) or are eyesores that detract from the aesthetic and tasteful appearance of the housing development or apartment complex. To counteract these negative consequences, the subdivisions and associations include in their deeds, leases or by-laws, restrictions and limitations on the location and height of antennas or, in some cases, prohibit them altogether. The restrictive covenants are contained in the contractual agreement entered into at the time of the sale or lease of the property. Purchasers or lessees are free to choose whether they wish to reside where such restrictions on amateur antennas are in effect or settle elsewhere.

Supporting Comments

10. The Department of Defense (DOD) supported the ARRL and emphasized in its comments that continued success of existing national security and emergency preparedness telecommunications plans involving amateur stations would be severely diminished if state and local ordinances were allowed to prohibit the construction and usage of effective amateur transmission facilities. DOD utilizes volunteers in the Military Affiliate Radio Service (MARS), \fn 4/ Civil Air Patrol (CAP) and the Radio Amateur Civil Emergency Service (RACES). It points out that these volunteer communicators are operating radio equipment installed in their homes and that undue restrictions on antennas by local authorities adversely affect their efforts. DOD states that the

responsiveness
of these volunteer systems would be impaired if local ordinances
interfere with
the effectiveness of these important national telecommunication
resources. DOD
favors the issuance of a ruling that would set limits for local and
state
regulatory bodies when they are dealing with amateur stations.
11. Various chapters of the American Red Cross also came forward to
support
the ARRL's request for a preemptive ruling. The Red Cross works closely
with
amateur radio volunteers. It believes that without amateurs' dedicated
support,
disaster relief operations would significantly suffer and that its
ability to
serve disaster victims would be hampered. It feels that antenna height
limitations that might be imposed by local bodies will negatively affect
the
service now rendered by the volunteers.
12. Cities and counties from various parts of the United States
filed
comments in support of the ARRL's request for a Federal preemption
ruling. The
comments from the Director of Civil Defense, Port Arthur, Texas are
representative:

The Amateur Radio Service plays a vital role with our Civil Defense
program
here in Port Arthur and the design of these antennas and towers
lends
greatly to our ability to communicate during times of disaster. We
do not
believe there should be any restrictions on the antennas and towers
except
for reasonable safety precautions. Tropical storms, hurricanes and
tornadoes are a way of life here on the Texas Gulf Coast and good
communications are absolutely essential when preparing for a
hurricane and
even more so during recovery operations after the hurricane has
past.

13. The Quarter Century Wireless Association took a strong stand in
favor of
the Issuance of a declaratory ruling. It believes that Federal
preemption is
necessary so that there will be uniformity for all Amateur Radio
installations
on private property throughout the United States.
14. In its comments, the ARRL argued that the Commission has
the jurisdiction to preempt certain local land use regulations

which frustrate or prohibit amateur radio communications. It said that the appropriate standard in preemption cases is not the extent of state and local interest in a given regulation, but rather the impact of the regulation on Federal goals. Its position is that Federal preemption is warranted whenever local government regulations relate adversely to the operational aspects of amateur communication. The ARRL maintains that localities routinely employ a variety of land use devices to preclude the installation of effective amateur antennas, including height restrictions, conditional use permits, building setbacks and dimensional limitations on antennas. It sees a declaratory ruling of Federal preemption as necessary to cause municipalities to accommodate amateur operator needs in land use planning efforts.

15. James C. O'Connell, an attorney who has represented several amateurs before local zoning authorities, said that requiring amateurs to seek variances or special use approval to erect reasonable antennas unduly restricts the operation of amateur stations. He suggested that the Commission preempt zoning ordinances which impose antenna height limits of less than 65 feet. He said that this height would represent a reasonable accommodation of the communication needs of most amateurs and the legitimate concerns of local zoning authorities.

Opposing Comments

16. The City of La Mesa, California has a zoning regulation which controls amateur antennas. Its comments reflected an attempt to reach a balanced view.

This regulation has neither the intent, nor the effect, of precluding or inhibiting effective and reliable communications. Such antennas may be built as long as their construction does not unreasonably block views or constitute eyesores. The reasonable assumption is that there are always alternatives at a given site for different placement, and/or methods for aesthetic treatment.

Thus, both public objectives of controlling land use for the public health, safety, and convenience, and providing an effective communications network, can be satisfied. A blanket to completely set aside local control, or a ruling which recognizes control only for the purpose of safety of antenna

construction,
would be contrary to...legitimate local control.

17. Comments from the County of San Diego state:

While we are aware of the benefits provided by amateur operators, we oppose the
issuance of a preemption ruling which would elevate `antenna effectiveness' to a
position above all other considerations. We must, however, argue that the local
government must have the ability to place reasonable limitations upon the
placement and configuration of amateur radio transmitting and receiving
antennas. Such ability is necessary to assure that the local decision-makers
have the authority to protect the public health, safety and welfare of all
citizens.
In conclusion, I would like to emphasize an important difference between
your regulatory powers and that of local governments. Your Commission's
approval of the preemptive requests would establish a "national policy."
However, any regulation adopted by a local jurisdiction could be overturned by
your Commission or a court if such regulation was determined to be
unreasonable.

18. The City of Anderson, Indiana, summarized some of the problems that face
local communities:

I am sympathetic to the concerns of these antenna owners and I understand that
to gain the maximum reception from their devices, optimal location is necessary.
However, the preservation of residential zoning districts as "liveable"
neighborhoods is jeopardized by placing these antennas in front yards of homes.
Major problems of public safety have been encountered, particularly vision
blockage for auto and pedestrian access. In addition, all communities are faced
with various building lot sizes. Many building lots are so small that
established setback requirements (in order to preserve adequate air and light)
are vulnerable to the unregulated placement of antennas.
...the exercise of preemptive authority by the FCC in granting this request
would not be in the best interest of the general public.

19. The National Association of Counties (NACO), the American Planning Association (APA) and the National League of Cities (NCL) all opposed the issuance of an antenna preemption ruling. NACO emphasized that federal and state power must be viewed in harmony and warns that Federal intrusion into local concerns of health, safety and welfare could weaken the traditional police power exercised by the state and unduly interfere with the legitimate activities of the states. NLC believed that both Federal and local interests can be accommodated without preempting local authority to regulate the installation of amateur radio antennas. The APA said that the FCC should continue to leave the issue of regulating amateur antennas with the local government and with the state and Federal courts.

Discussion

20. When considering preemption, we must begin with two constitutional provisions. The tenth amendment provides that any powers which the constitution either does not delegate to the United States or does not prohibit the states from exercising are reserved to the states. These are the police powers of the states. The Supremacy Clause, however, provides that the constitution and the laws of the United States shall supersede any state law to the contrary. Article III, Section 2. Given these basic premises, state laws may be preempted in three ways: First, Congress may expressly preempt the state law. See Jones v. Rath Packing Co., 430 U.S. 519, 525 (1977). Or, Congress may indicate its intent to completely occupy a given field so that any state law encompassed within that field would implicitly be preempted. Such intent to preempt could be found in a congressional regulatory scheme that was so pervasive that it would be reasonable to assume that Congress did not intend to permit the states to supplement it. See Fidelity Federal Savings & Loan Ass'n v. de la Cuesta, 458 U.S. 141, 153 (1982). Finally, preemption may be warranted when state law conflicts with federal law. Such conflicts may occur when "compliance with both

Federal and state regulations is a physical impossibility," Florida Lime & Avocado Growers, Inc. v. Paul, 373 U.S. 132, 142, 143 (1963), or when state law "stands as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress," Hines v. Davidowitz, 312 U.S. 52, 67 (1941).
Furthermore, federal regulations have the same preemptive effect as federal statues, Fidelity Federal Savings & Loan Association v. de la Cuesta, supra.
21. The situation before us requires us to determine the extent to which state and local zoning regulations may conflict with federal policies concerning amateur radio operators.
22. Few matters coming before us present such a clear dichotomy of view point as does the instant issue. The cities, countries, local communities and housing associations see an obligation to all of their citizens and try to address their concerns. This is accomplished through regulations, ordinances or covenants oriented toward the health, safety and general welfare of those they regulate. At the opposite pole are the individual amateur operators and their support groups who are troubled by local regulations which may inhibit the use of amateur stations or, in some instances, totally preclude amateur communications. Aligned with the operators are such entities as the Department of Defense, the American Red Cross and local civil defense and emergency organizations who have found in Amateur Radio a pool of skilled radio operators and a readily available backup network. In this situation, we believe it is appropriate to strike a balance between the federal interest in promoting amateur operations and the legitimate interests of local governments in regulating local zoning matters. The cornerstone on which we will predicate our decision is that a reasonable accommodation may be made between the two sides.
23. Preemption is primarily a function of the extent of the conflict between federal and state and local regulation. Thus, in considering whether our

regulations or policies can tolerate a state regulation, we may consider such
factors as the severity of the conflict and the reasons underlying the state's
regulations. In this regard, we have previously recognized the legitimate and
important state interests reflected in local zoning regulations. For example,
in Earth Satellite Communications, Inc., 95 FCC 2d 1223 (1983), we recognized
that

...countervailing state interests inhere in the present situation...For
example, we do not wish to preclude a state or locality from exercising
jurisdiction over certain elements of an SMATV operation that properly may fall
within its authority, such as zoning or public safety and health, provided the
regulation in question is not undertaken as a pretext for the actual purpose of
frustrating achievement of the preeminent federal objective and so long as the
non-federal regulation is applied in a nondiscriminatory manner.

24. Similarly, we recognize here that there are certain general state and
local interests which may, in their even-handed application, legitimately affect
amateur radio facilities. Nonetheless, there is also a strong federal interest
in promoting amateur communications. Evidence of this interest may be found in
the comprehensive set of rules that the Commission has adopted to regulate the
amateur service. \fn 5/ Those rules set forth procedures for the licensing of
stations and operators, frequency allocations, technical standards which amateur radio equipment must meet and operating practices which amateur operators must follow. We recognize the amateur radio service as a voluntary, noncommercial communication service, particularly with respect to providing emergency communications. Moreover, the amateur radio service provides a reservoir of trained operators, technicians and electronic experts who can be called on in times of national or local emergencies. By its nature, the Amateur Radio Service also provides the opportunity for individual operators to further international goodwill. Upon weighing these interests, we believe a limited preemption policy is warranted. State and local regulations that operate to preclude amateur communications in their communities are in direct conflict with federal

objectives and must be preempted.
25. Because amateur station communications are only as effective as the
antennas employed, antenna height restrictions directly affect the effectiveness
of amateur communications. Some amateur antenna configurations require more
substantial installations than others if they are to provide the amateur
operator with the communications that he/she desires to engage in. For example,
an antenna array for international amateur communications will differ from an
antenna used to contact other amateur operators at shorter distances. We will
not, however, specify any particular height limitation below which a local
government may not regulate, nor will we suggest the precise language that must
be contained in local ordinances, such as mechanisms for special exceptions,
variances, or conditional use permits. Nevertheless, local regulations which
involve placement, screening, or height of antennas based on health, safety, or
aesthetic considerations must be crafted to accommodate reasonably amateur
communications, and to represent the minimum practicable regulation to
accomplish the local authority's legitimate purpose. \fn 6/
26. Obviously, we do not have the staff or financial resources to review all
state and local laws that affect amateur operations. We are confident, however,
that state and local governments will endeavor to legislate in a manner that
affords appropriate recognition to the important federal interest at stake here
and thereby avoid unnecessary conflicts with federal policy, as well as time-
consuming and expensive litigation in this area. Amateur operators who believe
that local or state governments have been overreaching and thereby have
precluded accomplishment of their legitimate communications goals, may, in
addition, use this document to bring our policies to the attention of local
tribunals and forums.
27. Accordingly, the Request for Declaratory Ruling filed July 16, 1984, by
the American Radio Relay League, Inc., IS GRANTED to the extent indicated herein

and in all other respects, IS DENIED.

I too, am one of those so called No code hamsters that got into the hobby via the "cheaters" ticket. But just because I got in that way, does that mean I'm content as a no code? Hell,No! Iv'e loved this hobby since I was Five years old, and now, that I have a ticket after a 25 year struggle to get it, does one think that I'm gonna be happy with a no code licence? Some hams earn thier upgrades at warp speed. Well, god bless e'm. Sadly, I'm not one. This is a HOBBY, not a carrer.I'm not in it for glory power, or MONEY.I'm in it for FUN, and fun alone, and if I learn something along the way, so be it.

Is there any way to validate the availability of a call for the vanity callsign program other than submit and wait?

The QRZ engine doesn't have the info - there are a few servers that have some of it, but it isn't complete. The QRZ list is nice, but isn't useful if a call is actually reserved.

Does anyone have a pointer to a site that maintains it or ??????

Thanks.

-Bob

I don't think you will find such a regulation..... the FCC recently
adopted a ruling that specifies variances to local restrictions as
they apply to commercial TV and Satellite antennas.

The stretch to include Amateur antennas is wishful thinking at this
point, not a law. Towers have never been included in any discussion
of this type as far as I know. Towers are typically considered to be
structures (unlike antennas), and are subject to a whole different set
of permit problems.

Have you accessed the ARRL web page? I seem to remember they have a
whole section on defending your turf and the law in these regards.

Then there are some in your areas that can be called boobs. I can say with confidence, and I know Bill Sohl can agree, we have little, if any of that nonsense here in NNJ. Anybody who starts is summarily boo'd and told to go somewhere else, no the other way around.

> But I
> prevailed and found a group of no-codes on 2M simplex (where the real
> operators are)
> and we challenged eachother to an up-grade contest.

Did that myself, included were 1 general class and 4 tech's (one of which had been licensed since the late 50's). He's now an extra, the rest advanced. We practiced 15 minutes a night for 6 weeks, first setting a test date as a goal. We now get on 2 and 10m to help out when asked.

>

Sorry, what did I miss?
That is you above isn't it?

I guess you can't read very well. Either that, or you're not very
familiar with the various classes of US amateur radio licenses.

I'll help you...

Tech Plus means Technician PLUS successfully passing a 5WPM Morse code
test, thus granting Novice HF privileges as well. Therefore, the
following response that you made to me is totally inaccurate:

> >>Actually there'll be quite a crowd there for a while yet, but then
we
> passed the code test. Sorry you can't.<<

I also held an additional station license at one time over 10 years ago
and that too is still available (not reassigned).

My brother is thinking about applying for his old call sign from over 15
years ago under the Vanity program, yes it is still available and has
not be reassigned.

Any thoughts or comments?

Hi,

We would like to take a minute of your time to inform you of our new Electronics Resource Directory, a free, comprehensive listing of over 500 Web sites of interest to electronics enthusiasts and engineers.

The Directory is available on our web site at:
http://www.netins.net/showcase/elab

If you have an electronics-related web site and would like to add a link to our resource directory from your site, just cut-and-paste the following HTML into your page's source code:

This will place an attractive 'Electronics Resource Directory' logo onto your page that will hot-linked to our Directory for your and your visitor's convenience and use.

We thank you for your time and hope the Electronics Directory will be useful to you. Please let us know if you would like a free listing for your page in our directory!

So what if there's trafficking? The whole thing is about getting the
callsign that you want right? It's also about money, the more the
callsign is transferred, the more money Uncle Sam gets. Good way to
reduce the deficit. We should go back and change that to one year.

Have a Yaesu 2070 dual band commercial HT, 32 channels, rapid charger,
program kit & cable, software, manual, etc. Radio does
136-174/440-470. Can be modded to do 470-490 or any split by factory.
$650/bo cash. Please reply asap, no reasonable offer refused.
Radio is in great condition, has a DTMF keypad, PL decode/encode and 2
tone decode board.
Must sell ASAP, $650/best offer. Feel free to e-mail your best offer
or call anytime, 415-939-1037!
This radio is worth over $700 with program kit, rapid charger, etc...
Evan

Will consider trade for:
Icom F40 450-500 split
Motorola JT-1000
Bendix 210 UHF.
or other UHF 440-490 UHF HT with DPL capabilites & Alpha.
==========
To reply vie e-mail, reply to eplatt@wco.com.
Sorry for the inconvience, but spammers will pull your name without
your permission from postings, sending unsolicited e-mail!

Forgive me, but I think you are just plain wrong about this. A linear is usually the cheapest major component of an HF station. You can buy 'em new (600 watts to 1 KW) for under a kilobuck, and used linears are notoriously easy to find for even less.

Personally, I do worry about the effects of close proximity to a 1.5KW linear, and I hope that the whole RF issue helps resolve it in favor of sensible safety practices. I run only 100W myself, at least at the moment.

>If this post has been sent to wrong place I am very sorry

For what? All of us have to start somewhere! You have arrived in the friendliest place in the world, ham radio. Sort of like Internet without wires! <Huge grin>

Once you discover what all this is about, you may embark on a lifetime of discovery. At 44 years into this thing, I am still having fun and, for the most part, the people in it are WAY above average folks.

>Could anyone explain to me what is packet radio, amateur radio and the
>difference between them.

Amateur radio is the permitted use of a relatively large part of the radio channels by individuals who do not have to pay for the right to use the channels. If you look at your broadcast radio, your FM radio and your TV set, you will see they are marked in channel numbers. Never mind about the meaning of that, right now, just discover here that there are MORE channel numbers above and below and between those that you see!

Many, many more. Whole sections of the channels are used by different people for different things! Police, fire people, constuction crews, people sending I love you messages from a cruise ship - they ALL use these other channels and MOST of the time they have to get a LICENSE from the government to use one or more of them.

Hams have to get licenses too. However, the hams use whole chunks of channels. Each chunk has different characteristics. Some chunks can be used to talk directly from Podunk, Texas, to Sydney, Australia, direct! On a good day, you can do that with the power of no more than a FLASHIGHT!

Imagine that, shining a flashlight up in the air and having it seen in Australia! Not only that but your little flashlight can be seen by THOUSANDS of people, all over the world at the SAME TIME! And, its all for free (well, not the cost of the flashlight or the very little for the paper work of the license), totally free, any time of day or night, just holler hello!

It is a priceless, fascinating hobby.... MAGIC that even David Copperfield cannot top.....

Now Packet Radio is a form of radio that packages up blocks of text and numbers into small groups within a larger message. It uses the radio channel to communicate these chunks of text to someone else, and while it is doing it, it makes sure that the chunk was received correctly at the

other end of the circuit. It is just one of MANY forms of amateur radio, but note... it isn't used just by hams. It is also used by fire departments, astronaughts in space... you name it.

>What sort of equipment do I need

A transmitter and receiver that operate upon a channel or set of channels that can be used with a similar type setup on the other end. Cost can be very little or LOTS. Like dogs, or most anything else, some dogs are bigger than other dogs. Ham radio is competitive and the my dog is bigger than your dog deal exists here too! That's part of the fun! It leads to CONTESTS!

There, a well trained little dog can often bite the heck out of even far bigger dogs... expererience and dedication count, just like other sports.

>Does it work worldwide or do I have to be within a distance of (say a tower >or station)

All of the above!

You may talk direct from you to someone else, or go through what we call a repeater station to help you.

Either way, your station uses an antenna. You buy or build your own antennas, some of which need be no larger than a foot or less in size, to HUGE ones that can require towers more than 200 feet high with wire lengths of 2400 to 4000 feet long.

The controlling factor for the tower and antenna size is the channel area. Some channels take bigger antennas than others.

Owning a St. Bernard can be a chore... Using the channels that require the huge antennas above takes space only found out in the country, but there are TONS of channels that can be carried around in your hand or pocket!

<smile>

All dogs are welcome!

>Anything extra would be very valuable

Yes indeed. Go to Radio Shack or a book store or a library and look us up! Your local library is a fine place, or in any event, one of several books you can thumb through is "Now You're Talking", published by one of the fraternal organizations in the hobby called the American Radio Relay League.

If you take it home, the chances are you will be started on this stuff!

In even most smaller cities or even out in the country, chances are someone will know of a "ham operator." Seek the person out, guys and gals abound in this thing!

The rest is all MAGIC!

>pls drop me email direct

Not really. I hope I've answered it in such a way that you will come back here or seek the area that will let you start this fascinating journey!

>Thanks in advance
>
>waheeb
>

De nada. !

Sale in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75".
Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, doesn't interact with
antenna like a steel mast would.

Assuming that your craft was registered or documented in the
United States, it appears your sources at FCC were unfamiliar with
their own rules.

Your attention is invited to paragraph 97.5(a)(2) of the FCC rules
for the Amateur Radio Service, which requires you to hold a valid
US FCC-issued license to operate Amateur Radio:

"(2) Within 50 km of the Earth's surface and aboard any vessel or craft
that is documented or registered in the United
States".

Been there, done that for 21 years, and have the T-shirts.

611. RFI/QRM 6.5 MHz to 7.85 MHz ID Request

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-08 00:00:00 UTC
From: Peter Costello <pec@styx.ios.com>
Message-ID: <5b0323$87n@nnrp2.farm.idt.net>
Source record: 207527

Recently I have been getting some periodic static like RFI/QRM between
6.53 MHz and 7.85 Mhz and would like to try and identify a possible source.
A harmonic is also heard but weaker in the 3.8-3.9 MHz band.

1) The noise is a static like sound. (Perhaps a motor?)
2) It repeats with a roughly 1 min. off 25 seconds on cycle with a
stutter off (ie it seems to interupt for a several millisecs just
a second or so before it goes off for a 1 min.) That seems to indicate
a bi-metalic like contact for a thermal device.
3) It is a recent phenom that may suggest it is related to colder weather
or a Christmas present.
4) It is consistently strong from 6.53 MHz to 7.85 MHz and quickly
disappears beyond that range of frequencies.

Possible suspects I have thought it to be include: Electric blanket,
heating pad, fish tank heater, car engine oil heater, traffic light,
or pump.

Although I have not done an exhaustive check, I am pretty sure it is
not origibating inside my own home.

Any ideas as to what it might be? If so how would I locate the source outside
my own home. Should I narrow the search to homes that are served by the same
utility transformer? How have others dealt with such problems where a neighbor
may have an RFI source like a fish tank heater or heating pad?

E-mail would be appreciated.

Thanks,
Pete Costello

It is likely a combination of distance and low population.

AZ and CO have fairly large amateur populations (14,000 and
11,000) but the other states you mention have smaller numbers
of licensees. I would guess you also seldom hear ND and SD
which are also quite distant from you and have small amateur
populations.

I wonder if you often hear DE which is closer to you, but has
the lowest number of licensees?

Hi Mark,

The info you need is in paragraph 97.313 of the rules.

73, de Hans, K0HB

- -

97.313 Transmitter power standards

(a) An amateur station must use the minimum transmitter power necessary
to carry out the desired
communications.

(b) No station may transmit with a transmitter power exceeding 1.5 kW
PEP.

(c) No station may transmit with a transmitter power exceeding 200 W PEP
on:

(1) The 3.675-3.725 MHz, 7.10-7.15 MHz, 10.10-10.15 MHz and
21.1-21.2 MHz
segments;

(2) The 28.1-28.5 MHz segment when the control operator is a
Novice or Technician operator;
or

(3) The 7.050-7.075 MHz segment when the station is within ITU
Regions 1 or
3.

(d) No station may transmit with a transmitter power exceeding 25 W PEP on the VHF 1.25 m band when the control operator is a Novice operator.

(e) No station may transmit with a transmitter power exceeding 5 W PEP on the UHF 23 cm band when the control operator is a Novice operator.

(f) No station may transmit with a transmitter power exceeding 50 W PEP on the UHF 70 cm band from an area specified in footnote US7 to S 2.106 of the FCC Rules, unless expressly authorized by the FCC after mutual agreement, on a case-by-case basis, between the EIC of the applicable field facility and the military area frequency coordinator at the applicable military base. An Earth station or telecommand station, however, may transmit on the 435-438 MHz segment with a maximum of 611 W effective radiated power (1 kW equivalent isotropically radiated power) without the authorization otherwise required. The transmitting antenna elevation angle between the lower half-power (3 dB relative to the peak or antenna bore sight) point and the horizon must always be greater than 10.

(g) No station may transmit with a transmitter power exceeding 50 watts PEP on the 33 cm band from within 241 km of the boundaries of the White Sands Missile Range. Its boundaries are those portions of Texas and New Mexico bounded on the south by latitude 31 41' North, on the east by longitude 104 11' West, on the north by latitude 34 30' North, and on the west by longitude 107 30'
West.

(h) No station may transmit with a transmitter power exceeding 50 W PEP on the 219-220 MHz segment of the 1.25 m band.

Hello! I'm looking for a TNC cable compatible with
the 8-pin mic connector on a Kenwood TS50. I don't care
what is on the other end, as I will hack my own
connector on to it. I believe an MFJ 5086 TNC cable will
do the trick.

Please drop me a note if you'd like to unload one.

lAs an aside, when I noticed the header for this thread, I thought I would throw in a pet peeve, a local repeater here that is an older established system has so darn many "roger beep" tones at the end of your transmission that I expect the IDer to be transmitted thru an echo box. These things really get rough during a net, when every signal is followed by a "beep-boop-beedeley beoop". Wouldn't a single beep be sufficient, especially during heavy use??

>
>Anyone have any thoughts on this?

Well, first things first. The rules require amateurs running
over 50 watts to conduct a routine evaluation of their station
to see if it falls within compliance with the RF radiation exposure
standards. Most should. The FCC, with input from the ARRL and others,
is preparing an advisory circular to tell you how to do that. This is
a revision of OST-65 which broadcasters have been using for several
years. Basically, there are a number of charts and graphs that you
apply to your installation to tell you if you are in compliance or
not. Actual field strength measurements are optional. Likely they
will also accept computer modeling, which is really the most reasonable
approach for most amateur installations. The program NF.EXE on the
ARRL website is likely to be acceptable for this.

As far as enforcement goes, the FCC will follow their usual
practice of random inspection, but will depend mainly on
voluntary compliance. If they want to get you for something,
they'll look at this as one way of nailing you, but if they
aren't interested in you, it won't matter. You don't have to
submit anything to them, just keep the evaluation with your
station records in case they ever ask to see it.

>Any help or related information would be much appreciated. Thanks!
>

Oh dear, this really is a pity as you need the power supply that goes with the 551. This is in a separate box and provides all the required regulated power busses.

You need a 551 power supply. Power supplies for other 2-part Tek's (eg. 507, 517 or 555) will not fit.

If you find the power supply, the connection 1:1 so it is easy to make a cable yourself.

If you decide to build your own power supply, it will need to produce:

about 4 different 6.3 VAC lines at a total of about 10 A (My guess)

-150 V @ 100 mA
+100 V @ 100 mA
+225 V @ 200 mA
+350 V @ 350 mA
+500 V @ 50 mA

The current ratings are approximate but they do indicate that it is probably non-trivial to build your own power supply. Also, they need to be well regulated, typical ripple specs on these busses are of the order of 5 or 10 mV tt.

If you need more info, talk to Stan Griffiths (w7ni@teleport.com) who knows everything about old Tek scopes, Or EJ Holleman (e.j.holleman@student.utwente.nl) who has a 551 and is probably willing to give you a connector pinout if you need one.

Too bad about your scope, for it is truly one of the great classics when complete and working.

On the subject of classic scopes, you are welcome to have a look at the Museum of Tektronix scopes, which can be found at:

http://cal003109.student.utwente.nl/~wel/tek.htm

And should you get the connector pinout, it would be great if you would send me a
copy so I can include it in the museum on the technical info page.

Regards,

Arnoud.

p.s your mailing address does not seem to work.

Source record: 207538

My girlfriend has agreed to study for and take the novice/tech exams, and I'm trying to help her our. She's read Now You're Talking (twice), and I thought it'd be nice to hook her up with some test software for the Mac.

I've got a Mac SE (4Mb RAM/240Mb HD) that I'm going to loan her.. The only Mac test software I was able to locate on the Web was stand alone, and required system 7 or above. The SE is running system 6, which seems to be about all it will handle given the 4Mb limitation.

Could someone please point me to a site with Hypercard Tech and Novice written exams? It'd be most helpful!

BTW: I did find one site with ALMOST what I was looking for..unfortunately it was 1991 info, and those questions are no longer valid. :-(

Just imagine how much worse it would be without the code requirement
Still, it keeps most of the lesser types out now... not perfect
though...
maybe the code requirement needs to be raised. Say 13wpm, 18wpm, 25wpm.

Hi, eric here. Justin went back to sckool to learn his spellun
betterer :) The beeper in my midst was speaking of 20m nets. They seem
to drive him up the wall.In fact he has threatened severe violence if
they don't stop now!

Actually, he does participate in the LISTS and this has helped him get some nice catches. He just gets tired of listening to the colostomy bag reports and "My detures are hurting" comments :)
Look out boys he is studying his 20wpm and he is a fire brand when it comes to long haul DX. And he beeps too!

Eric KC5WCP
elmer and mentor(mental torturer) of KC5WCO Justin
and no he ain't my family. he just eats like he is :)

In reality, and lets be honest about life here...The hams who can
afford a 1.5KW amp are also the hams who have the money to influence
decisions at both the FCC and HQ.
Or did greasing the palm suddenly disappear from our society :)
Seriously, it happens all the time. Money talks and no-code techs
walk. At least thats how we are treated by many(not all) coders.

st for the >future of amateur radio. I think they realize that whatever decision >they make will be enormously unpopular.

The February issue of QST will have an article, summarizing the survey
results. The article discusses, among other things, the ARRL WRC-99
Planning Commmittee which has, I understand, formulated a recommendation
to the ARRL Board. (I really don't know the details of that
recommendation, so will not speculate.) The ARRL Board will then
consider that recommendation, along with their own experience and contact
with hams througout their Divisions, and quite probably set an ARRL
position and policy at its next regular meeting on January 17 in
Albequerque, NM.

I agree; whatever decision is made, it will be unpopular with some hams
because in this case, it is clear that there is no concensus amongst
amateurs about what course should be taken. If you have things you want
to say to your ARRL Division Director, this is the time to say them. Do
not let these fine folks make this decision without your input, no matter
what side of the issue you fall into.

I will also point out that no issue is decided "for all time." No matter
what the outcome, I urge hams to continue to offer their voice to the
ARRL policy makers and, if it doesn't turn out "your way," continue to
work contructively for the changes you think should happen. I offer that
you can best influence ARRL as a Member, but the tradeoff between ARRL's
ultimate (or long-term, perhaps) Morse Code policy and the important work
we are doing with spectrum preservation, congressional lobbying, etc.,
is something that each amateur must decide for his or her own self.

In the long run, Morse may go or Morse may stay, and the Amateur Radio Service will still be here either way, changed perhaps, but here. If we lose our bands to the ever-increasing commerical pressures, they are gone for good. And, quite honestly, it is NOT the HF bands that are in the greatest danger. I may be a 99% CW, 95% HF op, and have my own views on the retention of the CW test (I won't say, but some would be surprised), but I do know that retaining the spectrum I rarely use is important to us all. We can afford to fight amongst ourselves to our hearts' contents over the Morse Code issue, but we gotta' know when it is time to fight and when it is time to stick together.

BTW -- I suspect that "join the ARRL contingent" may be as much related to the age of the poster as it is to their views on Morse Code. There is a fair correlation between age, the number of years that someone has been a ham and the likelihood that they have passed a Morse Code test. I know that when I was a young lad of 13, I was a ham but not a League Member. When I came to work here at age 35, I was a ham, but not a League Member. I can't say whether it was age, or my experiences here that led me to join, but now I think I will renew my membership for quite a while to come. FWIW.

Have you priced linears lately, new or used? I bought a Dentron GLA-1000 for $200.00 at a hamfest. It served me quite well for many years until the power transformer died. It would have cost more to rewind the transformer than what I paid for the linear. I have an SB-200 that I paid about the same price for, but I used it twice and then sold it after making some antenna improvements, after which, I had no need for a linear. I sold it for about $50 less than what I paid for it.

Al,
It took me exactly one month. I applied on November 18, and was assigned on December 18. I recieved my paper copy of the license about two weeks after that.
I applied electronically, over the internet.
At the time, there was a backlog at the FCC. I would think things are speeding up now.

>Are you sure that it's alternator whine! The usual culprit is the electric
>fuel pump for the injectors

It does sound like alternator whine. It isn't unusual for it to be louder when you first start up because the alternator is generating its highest output as it tries to recharges the battery after just starting the car.

When the noise is occuring, disconnect the antenna to see if the received noise disappears. If it disappears, the noise is being radiated and is coming down the antenna and into the receiver. If it doesn't disappear, then it is probably coming through the power leads.

In either case, make sure your rig is bonded to a good ground--don't just rely on the negative battery lead and/or antenna coax shield to properly ground the radio.

If the noise is a recent addition, try to think of anything else that happened around the time it started. See if you can find a clue that way.

Good luck!

Carl...

I have been driving Ford cars for years and I am well aware of what causes the problem. I have seen it fixed more than once. If you look at the output of the regulator you will notice a thin green wire. Its the field sense. The way it was fixed for me was to insert a 10 amp 30 volt diode in that line. I do not remember which way the cathode goes but I know it works. It was done for me on my Old Torino; on a Maverick and two Cougers. Im still driving the '89.

Don't do this yourself It requires mounting the diode inside the alternator case. Sugest you find a good auto electrical man and talk with him. Ask him about rectifyinf the sense line. Hope this helps.

(Sorry if these aren't the best groups to post this to.)

I'm in the market for a 900MHz digital cordless phone. I know some of the cheaper phones aren't digital even when they operate at 900MHz. From what I've read in the press and on the net, true digital and a feature called "spread spectrum" is best. Also, I'd like a phone and digital answering machine, all-in-one. I haven't seen a unit with this combination of features. Can anyone recommend something to me?

Thanks.

Jerry Willard

Please remind that we will have the JIDX LF CW contest in this weekend.

You can get the complete rule or past result from our info-server.
Please send an email to

jidx-info@dumpty.nal.go.jp

with the following command in the body of the message;

help
#get index
#get jidxrule.eng

then you'll be able to receive help(user guide), index(file name of
the jidx rule/results) and the current rule.

Your participation will be really appreciated.
Regards

JIDX contest committee chairman

OM:

Call the FCC Consumer Information 800 number and ask the representative
to look up the call(s) you want to research. They will be glad to look up
a maximum of five calls for you. If you have more than five to look up
just call back!

Good luck.

649. RE: 2 meter 440 j-pole ant.

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-08 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9701081741009146@atdbbs.com>
Source record: 207565

>>...if anyone has design of vthis j-pole ant...

I got this at a local radio club. I've have good results on
both 2m and 440. It's only designed for 2m, but my SWR was
actually lower on 440. Excuse my attempt at recreating the
drawing! :D

THE POCKET PORTABLE J-POLE
for 2 meters

Here's a neat little project that will prove useful Hole optional
for portable operation or improving your HT in the lo l
fringe areas. l l
l l
1. Cut a piece of TV twin-lead 55 1/8" long. l l
l l
2. Clean off 1/2" of insulation at one end. l l
Twist the exposed ends together and solder. l l
l l
3. Measure 16 5/8" from the shorted end and remove l l 55 1/8"
1/4" of conductor on one side. l l total
l l
Note: You now have a half-wave radiator l l
connected to a 1/4 wave stub. Now all you have l l
to do is connect a piece of 50 ohm coax to the l l
50 ohm impedance point on the stub. l l
l l
4. Cut a piece of 1/8" RG174U coax about 6' long. l l
(RG58U is OK but it doesn't fit in your pocket 1/4" l
so well.) Put an antenna connector on one end gap l 16 5/8"
and open up the other end for making connection l l <to bottom
to the stub. l l of gap
l l
5. Open the two twin-lead conductors up at a point l l
1 1/4" from the shorted end and solder the coax l l
braid to the short conductor and the coax center l l
lead to the long conductor. Cover the joint with l l 1 1/4"
electrical tape. l--l <to coax
ll l connect
6. Punch a small hole at the open end of the twin- ll l point
lead to permit using a string to support the ll l
antenna from any convenient place. llll <shorted
l

Results will suprise you. Expect several "S" unit l
improvement over the pull-out whip or even more over lCOAX 50 ohms
the rubber duckie. l

Measurements from
the shorted end.

You might want to use heat shrink on the connections
after you get it working. Also, do step 2 first. I broke
a conductor when 'cleaning' it, and had to start over.
The measurement would then be 54 5/8" (end to short).

This actually appeals to me, I mean, then nobody can ask for a ride. :) This
is best accomplished with pickup trucks and two-seater sports cars.

>Seriously, I'm with the other poster who suggested that
>you go ahead and mount the radios wherever you can, and
>if problems occur, deal with them.

That could be an expensive mistake. First, are the radios that Jeff wants
to put in the truck remote mountable? If so just stick the RF decks at the
rear of the truck and mount the remote heads at the console. At the same
time be sure your power connections are nice and clean, no cheapy
plugging into the cigarrette lighter types. I'd say that would work quite
nicely.

Sounds like something that might turn up the 146.700 repeater here in
Rhode Island. At one time I was the editor of the newsletter for the
Ocean State Amateur Radio Group during a period where the repeater was
being severely abused by rag-chewers who were well within simplex range. As
a result I included a simple five or six point guide to good amateur
practice in the next newsletter. It fell on completely deaf ears.

Even though I obtained my license a scant five years ago I've seen the
quality of the 2m band and even the 70cm band slide downhill.

>the slightest.

I see your point, but that sort of QRP *is* a game in many cases.
Its purpose isn't to measure system efficiency, or to accomplish a
communications task, rather it is a contest of operator talents. That's
Ok, of course, it just doesn't have much to do with communications
(the objective of communications is to communicate, IE exchange
significant a priori unknown information content with the distant
party). If what you are doing is so stylized as to be essentially
completely predictable a priori, it isn't communications in any real
sense. It is only a sterile exercise in protocol.

Like traditional ORP operators, my operation is usually low power as
well. I normally use less than 50 watts when operating commercially
available digital modes such as Clover, and currently I'm using less
than 10 mW with the new hardware and software I've been developing
(note, that doesn't necessarily mean my new system is 500 times better
than Clover, in some ways it isn't better at all, in others it may be
significantly better, the metrics are really more complex than that).

But if all I could do was the bare minimum exchange to declare a contact,
I'd quit. My goal is to move content over radio as efficiently as possible,
and to do that, I have to exchange some content, not just some stylized

procedural signs. That requires a common language of some sort. (Note that the common language could be machine language if the information being exchanged is a binary file, but in the general case of operator to operator exchanges (that pesky international goodwill requirement) it needs to be a common human language such as English, German, Spanish, etc.)

In a sense what I'm doing is a game too because I don't *have* to try for minimum watts/bit. I just use how low I can go as a benchmark for my system's efficiency, the same I suppose as some other QRP operators use the bare fact of contact as a crude benchmark for their systems. Those benchmarks allow us to see what effects changes in the system achieve.

Note, of course, that minimum watts/bit isn't the only useful metric. It just happens to be the one I'm concentrating on at the moment. A more generally useful and comprehensive metric is bits/watt/Hz/sec, but that has several local maxima, some of the better of which aren't allowed by current rules on HF. So I'm limiting my work to only one factor for now.

I think what I'm doing has the potential to be more useful than typical CW QRP operation, of course, or I wouldn't be spending so much time on it recently. But I don't totally discount the value of QRP operation in general. A lot of system efficiency factors are common to all QRP operations, manual or machine operated, and quite a bit of good work has been done by the experimenters using manual technique. But manual technique is so variable in quality that it serves as a very crude tool for ascertaining system improvements.

I believe the manual vein has been basically mined out, any further improvements are masked by variations in operator talents. Both commercially available systems like Clover and PACTOR II, and my own experimental system, can work well below the audible threshold in the channel bandwidths we're using now, so manual operation is useless as a measuring tool. I think that fully exploiting good signal design and the power of machine coding are the methods which will extend the envelope the most today. So that's what I'm doing.

The Shannon bound for Eb/No is -1.6 db. That's the holy grail of weak signal work. The best manual OOK can do is about 13 db Eb/No, but only over a very narrow range of rates. Machine methods have extended that to about 4 db Eb/No, and over a much wider range of data rates. That leaves us with another roughly 6 db of improvement yet to go. (Note that this is Eb/No and not CNR, that can be a remarkably different thing with some systems.)

That means, for example, that we should be able to at least quadruple rates over those currently achievable in a given channel bandwidth with current best techniques (used for Galileo). Or that we can do rates roughly 100 times those achievable by the very best OOK Morse operators in the same bandwidth (but see below), or the same rate with roughly 100 times weaker signals than the best OOK Morse operator

can achieve in the same bandwidth. Etc.

We can actually do very much better than that, if we don't limit ourselves to the same effective bandwidth and the narrow range of rates manual methods can handle, since manual OOK Morse is particularly inefficient as a signal and coding design, and because the human auditory signal processor has severe spectral and temporal limitations. For example, coherent FSK is 6 db better than OOK with no other changes or coding tricks such as FEC (that can provide up to 30 db SNR/CNR improvement under certain real world conditions). And the human audio signal processor can't deal with either very low or very high rates at all, nor can it deal with signals wider than about 15 kHz.

With machine methods, we can use very long integration times (effective SNR/CNR gain for long integration times is equal to the square root of the time of integration for the equivalent channel). You can't do that by ear. And with machine methods we can do very high rates spread over large bandwidths, which also can't be handled by ear. After a very small movement (in either direction) away from the information rates and bandwidths manual methods can handle, the machine methods offer an infinite throughput improvement because manual method throughput drops to zero.

What all this means is that manual OOK Morse is a dead horse in the race to improve communications system performance, whatever the direction you want to push that improvement.

What rule is that? The minimum power rule has nothing to do with whether two stations communicate via a repeater even though they might be in simplex range. There is nothing "illegal" about using a high level mountaintop repeater for communications with a ham across the street. Rude? Possibly. Illegal? No.

If it is your repeater you can do as you wish since it's your station - and others use it at your pleasure. Hell, you can make it a "closed repeater" and deny then access regardless of where they are or what they talk about. But don't tell these people they are violating any rules other than your own.

Regards

The blue coax trick works best when the connectors are painted
blue, too. However, this trick is only really useful with
NVIS or other 'skywave' antennas.

If your area is usually overcast, you can try a lighter shade of
blue for better transfer.

> it, no luck. The noise varies with engine speed, but is intermintent. It
> seems to be more prevalent when first starting up in the morning and soon

> dissappears after the first few min of transmission.

Like the other poster noted, the whine is probably worse when the
alternator is
charging more heavily. Try a heavy duty (amperage to match max alternator
output)
series inductor in the alternator output lead to the battery. The intent
is to keep
the AC from getting to the power bus.

An alternator is simply a field controlled 3 phase AC generator with an
integral
6 diode rectifier. Replacing the alternator may help a little bit but I
suspect that
it would largely be a waste of time and money. A newer and heavier battery
might help a bit, along with a pi filter to the radio (use low ESR caps.
Fuse the
input. Try 10,000 uF, 50 turns of #12 enameled on a toroid, 10,000 uF
again).

Do let us know what happens...

: from the authorities in XE. True?

Not really that much. I asked ARRL about reciprocal operating in Mexico for an upcoming trip to Puerto Vallarta, and they sent me a detailed package. This package contained the necessary forms, instructions and examples translated to English, persons to contact, information that these people speak excellent English, etc.

Had we been staying for more than a week, I would have followed through. But for such a short time, the $55US fee was a bit steep. If I were going to operate in a contest or just to be DX (not that XE is especially a rare prefix) there would have been no hesitation. But, I was just going to take my QRP rig and a simple antenna to drop from the window of the hotel room.

This is really a shame. Having been licensed now for 30 years, I am
actually a member of the generation of hams who are giving you the hassle
for being no-coders, and I take no pride in that association.

Helping newcomers is part of the amateur tradition at its best. I wonder if
these guys remember the help that they undoubtedly received from an "Elmer"
when they first came into the hobby.

Don't pay too much attention to these OTs. What you are seeing is probably
misdirected resentment toward the no-code license itself and, being a holder
of that license, you are the closest target.

Actually, I'm surprised at the number of veteran hams who come out in support of no-code access to HF on this newsgroup. Maybe that says something about this population, because most of the local OTs I encounter rank the no-code technician license right up there with incentive licensing as the biggest blunder in the last 30 years.

I was inactive in 1991, so I didn't make my voice heard at the time. Had I done so, my vote would probably have been NO to the no-code tech, because of my belief that it, as well as the coded novice ticket, should have been non-renewable, with no more than a five-year term.

Again, good luck to you and your friends!

73 de Jim - KF6CR

: Since I have become a ham, I have helped 4 people join the hobby. Two of
: them have upgraded

677. Elect WD8LDY NTX ARRL Section Manager

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-08 00:00:00 UTC
From: kb5yuc@aol.com
Message-ID: <19970108042800.XAA23851@ladder01.news.aol.com>
Source record: 207656

Greetings fellow HAM!

If you are a member of ARRL living in the North Texas Section, you were mailed a very important piece of mail on or about January 2, 1997 from ARRL
Headquarters in Newington, Connecticut. It is the ballot for the election of
the Section Manager who will serve you for the next two years.

As a candidate in the afore-mentioned election, I feel it my duty to make my position known. In doing so, I also wish to make you aware of the relative importance of some claims made by one of my opponents.

About six months ago, several friends individually approached me and offered
their assistance if I would agree to run for this office. Reluctantly, I agreed to do so, because I felt I could see that the current leadership had
lost its effectiveness. I also felt the leadership had, in favor of supporting unquenchable ego, ignored or forgotten the interests and needs of the section. As I began talking to more and more about my impending candidacy, I learned that the situation was actually far more prevalent than
I had noticed. This convinced me that, it was my duty to do what I could to
preserve an organization and its programs, long confirmed to be both reliable and beneficial to its membership.

About two weeks ago, I received what was apparently a mass mailing from Robert Adler, NZ2T, asking that I re-elect him to the post of Section Manager in the upcoming election. Knowing what I know, I cannot do this. I will now share portions of that mailing with you, taking care not to take anything out of proper context. Additionally, I will present to you the relevant facts that I know about the issues he mentions. I do not wish to question any of the qualifications (experience, dedication, and character) which he feels make him the candidate of choice, other than to suggest that
he surely cannot be alone in possession of those attributes.

Material taken directly from his mailing will be in quotes (") as is appropriate.

"Field Organization appointments increased from about 85 in 1993 to a current 237." I agree that these appointments have been made, but how effective are they? When I served as Section Traffic Manager (11/15/95-3/31/96) the most that ever reported station activity as

Official
Relay Station appointees was about 30. I believe subsequent evidence will show that this number has only decreased since that time. This suggests that
many of these appointments are stagnant, effectively inactive appointees. Additionally, I know that the number of appointments does not reflect the number of active members as most of the people that I know hold more than one appointment. But even if it did, this indicates that slightly under five
percent of the membership of this section holds one or more of these appointments. I'll have more to say about the number of members later.

"ARES membership increased from about 1000 in 1993 to about 3000 in 1996 (As
reported by the SEC)." This is interesting, but why is there still no county
wide ARES activity in the most populous county in our section? While I'm on
this subject, I have received unsolicited complaints from people who are interested in joining ARES, but cannot seem to do so, despite submitting two requests by way of application. When I suggested they should contact the
Section Manager, who is ultimately responsible for all section appointments,
including ARES membership, I was told that attempts to reach Mr. Adler were
unsuccessful.

"Official Observers increased from 8 to 18 in the same period." Have you or
anyone you know ever received an Official Observer post card either congratulating you on your operating skill or warning you of possible regulation violation by you or your station? I recently had occasion to speak with one of the appointees records indicate that holds an Official Observer Appointment. He stated to me that he had resigned the appointment because he was told by the leadership in this section that they should not be concerned with regulation violations.

"Assistant Section Manager 1991-93 Founded North Texas Speakers Bureau while
serving under SM W5URI." One club president commented to me that he could not understand the need for a speaker's bureau. His belief was that a club should be able to find its own programs, or appeal to the appropriate person
in leadership when a program from outside the club was desired. This seemed
to him to be unnecessarily re-inventing the wheel.

"Founded West Gulf Division Task Group while ASSISTANT DIRECTOR under N5TC.
This group promoted inter-section cooperation." I spoke with a few folks

with considerable experience with NZ2T's administration of this section in attempts to learn the meaning, benefit and/or results of the claim quoted immediately above. While I acknowledge the possible benefit of such a group,
I've seen nothing in the way of direct evidence to prove that the group existed beyond this claim, nor have I seen any resulting activity attributed to such a group. While Section Traffic manager (see above), I did
participate in a meeting that was supposed to establish a more uniformity in
the public service operations of the three ARRL Sections in Texas. However,
the evidence, based on the attendance and lack of results of that meeting only cause me to believe that such a group can only result in decreasing the
autonomy of each section. Therefore, the potential for its success seems highly unlikely.

"Creator of the KB5BNU Memorial Scholarship, and Chairman of the scholarship's sponsor committee." Originally, Bill Revis, KF5BL, George Lyons, K5MXQ, and Valli Hosky, N8QVT, were appointed to bring about the above-mentioned memorial. According to completely corroborative information
in my inquiries of these committee members, that is precisely what they did.
Upon concluding the assignment as they understood it, they submitted it to NZ2T, the serving Section manager. Later, they learned that some of what their report proposed had been changed. This was done without any knowledge
or consent by any member of this committee. They believe that any changes that were made simply were not acceptable to NZ2T. Therefore, any appointment made by him concerning the scholarship was strictly self-appointed, and does not in any way reflect any consideration of esteem
or ability from any individual or organization.

"More than 70 consecutive BPLs for traffic handling" While this is no small
feat at any time, I can assure you that it need not be a necessarily labor intensive one, when a computer does most of the work, even if you're asleep
or out of town! For the convenience of those who use them, and I am sure NZ2T has, packet bulletin board software even has a program to establish one's traffic count for any given month in a matter of a second or so. Since
NZ2T on more than one occasion advocated, even commanded, that some valid NTS traffic be sent via email rather than on the air as the Public Service Communications Manual requests, one can't be too sure of the validity of the
numbers he claims.

"Founder of the North Texas Digital Net" Let's be honest here. This is an idea that was properly conceived, but is far from reality. But there is little reason it need not be reality. I'll give him credit for the idea. What we have is a system of three full-time and two part-time bbses dedicated to traffic, that does a reasonably good job at handling DFW area
NTS traffic, when two of these boards aren't needlessly bouncing a message back and forth, potentially creating more artificial traffic counts. Most of
these problems in the last six months are caused by a board owner who can't
or won't take the time to either maintain his board or find someone who will
do it for him. This is an important project, and one that can and should be
reality. If elected, I hope to continue supporting it and doing what I can to make it all it can be.

"BBS Sysop for 9 years, including DFW HF Hub for several years in two "tours"." NZ2T told us that the hub concept was wrong for NTS digital, but this happened only when he lost interest in being the hub. In fact, he said
the hub was a concept that had been tried and failed, though I know of no one else in the digital NTS world who thinks so.

"OPENED UP FIELD ORGANIZATION LEADERSHIP TO PERSONS ALL OVER THE NORTH TEXAS
SECTION." After talking with two previous Section Managers of this section,
and confirming what I'd learned with a number of others licensed and active
since before I was born, I find no evidence to suggest that Bob Adler has done anything special here. As in other sections where I lived before coming here, leadership in one's preferred area of interest within the field
organization was _ALWAYS_ open to anyone willing to put forth a modest amount of effort and/or desire demonstrated by activity. This does, however,
bring into question, those unprocessed ARES applications I mentioned earlier.

"CREATED 'YOUTH' POSITION, EDUCATION, AND YL ACTIVITIES." I know of a couple
of schools that offer amateur radio to students, and one youth group that exists in this section. But it is clear to me that there has been little or
no direct involvement by NZ2T in the programs I have heard about.

"Developed 'Amateur Radio Weekend at the State Fair of Texas' project." This
is another good idea that has been steadily going down hill for the last three years, due largely to a lack of support both from fair organizers

and
hams themselves because of the numerous associated difficulties. What this project needs is a Section Manager who will find someone within the Fair organization to properly support and develop this into a serious presence at
the Fair, rather than a week-end of casual operating. Failing that, the Section Manager should find someone within the amateur community who can properly interface with the Fair organization to accomplish the same ends.

"Primary Control Operator and contact for W1AW/5 during the 1994 ARRL National Convention at Ham-Com." Why not? It is routine for any large national organization to depend on someone from within its ranks local to the location of a nationally sponsored event for a number of basic needs. ARRL would make the same request of any serving Section Manager living in the section where their National Convention is being held.

I'd like to mention something finally, that isn't mentioned above. While deciding what I needed to do to best serve members, I started asking some of them what they expected from the Section Manager. While I recognize that
all members are entitled to equal support, I think you'll agree that new members, particularly new members who are
coincidentally new hams, deserve a special kind of consideration. So I asked
some new hams what their experience had been with accessing the field organization's programs. Without exception, everyone I spoke to said they found access very difficult because they found it difficult at best to contact
any of the section leadership. This played a large role in my decision.

Below is what I officially submitted for publication on your ballot. I wanted
to present it here, so that everyone will have equal access to it in order to best consider the credentials that I offer the section's membership. I look forward to an opportunity to serve you and ARRL to the best of my ability. With your help, I shall not fail. But regardless of which candidate
you feel most worthy, please vote! Without your participation in such a most important question, the whole section ultimately loses!

73,
David C. (Dave) Allen WD8LDY

BIOGRAPHICAL SKETCH OF DAVE ALLEN, WD8LDY

Adress: 5529 Baker Drive, The Colony, TX 75056-1808
Telephone: (972)625-0195
Internet: wd8ldy@concentric.net
Packet: WD8LDY @ WD8LDY.#DFW.TX.USA.NOAM
Dave has been an active participant in ARRL programs since he became licensed in May, 1977. He has held his extra class license since October, 1984.

He received his first section level appointment in 1979 as Manager for the West Virginia Novice Net, when he was fifteen.

Dave has taught several beginner level amateur radio classes, and this remains a major interest.

Since moving to Texas in May 1994, Dave has held a number of section level appointments, including Manager of TEX, (The Texas CW Net) and Section Traffic Manager for the North Texas Section November 1995-March 1996. He resigned that position because he felt unable to perform the duties according to ARRL guidelines under the current leadership.

Presently, Dave is involved in both C.W. and SSB traffic nets, and also enjoys contesting. He has even been known to chase a little DX with his modest station. But he doesn't shy away from a standard CQ and rag chew fairly often, too.

As your Section Manager, Dave pledges his full support for the furthering of the broadest possible range of traditional amateur radio goals within the North Texas Section. He will find the best qualified people to assist him in these efforts. This volunteer staff will not be bulging with folks who can't or won't perform the duties of the positions they agree to undertake.

So that would suggest that a code-free US ham can operate HF in Mexico
with a reciprocal license from Mexico. That being the case, then
Mexico doesn't abide by the ITU treaty along with Japan.

Steve is right on about what we see here in NNJ. I've commented
also about what some people claim about other areas. Frankly,
I've traveled also and brought the 2M HT along and not encountered
the alleged CB behavior that some attribute to 2M. Likewise,
I've rarely encountered the belittling described above either.

>But that conflicts with the money spent and made in providing that info.

There however is nothing that prevents let's say the hams on this newsgroup from going to that site and sending messages with updates and corrections as long as the info doesn't come from a copyrighted sources. If you for example only use 5 repeaters in AnyCity, AnyState, and they aren't listed, you could send the info without fear of violating any copyright laws. There are enough hams on the internet to make such a project feasible and relatively reliable. It might also help get rid of some of the "ghost" repeaters I've seen listed as coordinated that I've never heard on the air in some cities. I mean 24 hours with a recorder set up to record any audio activity and nothing ranks as a "ghost" to me.

Regulations about RF exposure are not new. They have been in place since the mid 1980s. The regulations, less stringent than the current ones, were based on the 1982 ANSI standard. They did apply to Amateur Radio, but the ARRL successfully lobbied to have Amateur Radio categorically exempt from the requirements imposed on a number of other services because it was very unlikely that our relatively low power of 1500 watts would result in fields that exceeded the requirements of the regulations.

The 1980s regulations applied very much to the Broadcast Service. These use big antennas, sometimes located near residential neighborhoods and are operated by companies with deep pockets. However, there have not been a large number of lawsuits against broadcasters.

The new regulations are a direct response to revised standards published by the IEEE in 1991, ratified by ANSI in 1992. The new standards are more stringent. The FCC determined that some few amateur installations might exceed the new standards so the Amateur Radio Service was no longer categorically exempt -- we are required to perform a station evaluation (using a method still being developed.)

We have always been at risk for EMF lawsuits. The existance of standards and the old regulations would be enough for some who hate your antenna to use as an opportunity. However, we are probably better off in that regard, not worse off, for the existance of the regulations. When in litigation, you are always better off if you have a defense. Being able to state that there are regulations that define safe exposure and that require you to evaluate that exposure, and that you have performed that evalation and taken all steps required of you by the law is a pretty darn good one. Much better than "I think it is safe," as you might have to say if asked the question today.

>Just think, if a police radar exposure is well below <1mw/cm2, the power

>biggest joke in history. You cannot use them to back link to anything
>remotely related to science or a consensus standard.

The IEEE standard probably has the broadest concensus. The FCC regs are a "hybrid" between the IEEE standard and the standard offered by the NCRP. The regs, however, are a bit MORE strigent than the IEEE standard, forming a pretty good link to that standard (in the context we are discussing), IMHO.

Can't be as bad as 147.435 in Los Angeles. You hear the f word, the s word, and such. Jamming, etc. Think the local ham community consider it the Roach Hotel. Last time I looked at the rules, there was no exception for 147.435MHz specified.

In Bergen County NJ, everyone behaves themselves on 146.79 MHz.

Me, too!

I bought a Reveal FM radio board for the PC (about $40 at Best Buy), with the idea of being able to program it as you suggest.

<flame> I got disgusted at the dain-bramaged software that came with it (only 10 presets, hard to set with fixed scroll rate, roundoff errors in freq display, . . .). I'd have kept it if I could have gotten specs for how to control it -- I'd have written a control program myself. But their "24/7" tech support line put me on permahold so I gave up and returned it. </flame> I could always buy another one if I decide to try it again someday. It seemed like a well-build piece of hardware.

Seems like you could build an integrated control out of an old XT with the FM radio card in it and an IR emitter to drive the VCR. If the VCR won't record sound without a video signal to sync to, put a CGA card in the PC; you could put a timestamp on the video to tell you when the audio was sent, freq, station/program ID, etc., in nice bold characters that would show up in fast forward / rewind.

If your existing FM receiver is IR controllable, then that opens other possibilities.

I agree, this is a product that is missing from the marketplace. Probably wouldn't be terribly hard for the VCR makers to implement, either; they already have the front end, what's a couple more chips for the FM broadcast IF and detector? They can sell an entire Walkman for $cheap. . . It'd be neat: an 8-hour stereo audio recorder! There's not much on the tube worth watching, anyway.

We can't be the only two who've felt this need. Ideas, anyone?

Absolutely. That hasn't stopped the League though. Look how the League
went against the will of its members in the late 80's.

>I will also point out that no issue is decided "for all time." No matter
>what the outcome, I urge hams to continue to offer their voice to the
>ARRL policy makers and, if it doesn't turn out "your way," continue to
>work contructively for the changes you think should happen.

I cannot agree more. I believe that everyone, even those who are not
ARRL members, should voice their opinions to the local division and
section managers. However, unlike a lot of people, I do not believe that
making the decision to join the ARRL should be a "single issue" decision
(like some people use abortion as a single issue to vote for a candidate).

I like to bash the ARRL as much as possible, because I think they
deserve it. They also deserve credit where credit is due too.

I will say, though, that I do agree with some people who state that
occasionally the League must examine trends in amateur radio and
promote its growth though innovative changes. In that respect, I can
accept the League's decision to support a codeless VHF+ license in
the late 80s. As the de-facto representative of amateur radio in the
United States, this is the League's responsibility, in addition to
representing the will of its members. In some instances, these goals
will conflict with one another.

In the case of a codeless HF license, I have mixed reservations. In
one instance, I do agree with the likes of Carl and feel that there
should be an outlet for people to experiment with high-speed digital
techniques on HF. I must wonder, though, about everyone who is
interested in HF. Basically, the primary activity on HF is yacking
(whether ragchewing on SSB or contesting). The interest level in
"digital", I feel, is nothing more than a front for a lot of people
who really just want to bypass the code requirement to get on and
yack, no matter what they say. An alternative to both camps might
be to grant limited digital privs to people holding novice class
licenses and above.

>When I came to work here at age 35, I was a ham, but not

Probably because it's humorous and entertaining to listen to. I've never heard this particular machine and am NOT condoning what goes on there, but think about it...the antics on this frequency are much more enjoyable and relateable to the general public than the usual ham conversation topics of health ailments, equipment dissertations, and signal reports.

Hamfest - Sunday February 16, 1997
Sponsored by - The Long Island Mobile Amateur Radio Club
Where - New York State Armory, 63 Babylon Turnpike, Freeport, New York
Time - 9:00 - 2:00 (doors open at 7:00 am for sellers)
Admission - $25.00 / 6 ft table (LIMARC Supplied): $ 6.00 General Admission All others

If you are interested in selling at the hamfest, you MUST reserve you table(s) in advance. Please note tables will not be sold the day of the hamfest. Currently we have sold approximately
40% of the tables, so please do hesistate to reserve your space now.

Make your check out to LIMARC and mail it to Mark Nadel, W2OT, 22 Springtime Lane East, Levittown, New York 11756-4419.

For any additional details on the hamfest call the LIMARC information line at 516-520-9311 any time 24 hrs/day.

There will NOT be any amateur radio exams given at the hamfest.

Look for an HT with big buttons. The ones today have tinee tiny buttons
and if you have regular fingers, you always hit at least 2.

Personally, I'd opt for either the Kenwood or the Yaesu. Look for the
one that will allow you to use the highest power. The Kenwood has 2
models, one for 2.5 watts the other for 5 or 6

Your best bet as to where to get one is probably found in a ham
magazine..one of the mail order houses like Ham Radio OUtlet, AES, etc.
They'll have the best pricing and selection.

Good luck, enjoy

Boy, I'm really thrilled (and I'm sure other hams are too) that
amateur radio is being represented in such a positive light. I'm
sure this will do wonders when someone comes to take away our 2
meter frequencies. The FCC will no doubt be bombarded with letters
from non-amateurs screaming not to take away their entertainment.

Robert and all...

RE: The Los Angeles 147.435 MHz repeater. Its correct nick-name is
"The Animal Farm" -- a name taken by the systems user group on itself.

I agree that it is an "ear sore" and wish there were some way to rid
the airwaves of it. But, in reality, there are two reasons why no
action will ever be taken to put it out of its misert. Both are
political.

First, the Los Angeles ham community feels it is needed as a "pen" for
those hams the popoulice considers to be "undeirable." Its the famed
"NIMBY Syndrome," ie: as long as they are all on .435 they are NIMBY
-- not in my back yard -- on my repeater -- bothering me. So, the
community puts up with what happens there in the hope it will not
happen on other repeaters. Sort of an unwritten truce that says "you
435ers stay in your back yard and we "good hams" will stay in ours."
Its a truce that has held -- with a few "incursions" now and again --
for over a decade -- mainly when .435 is down for repair. As such,
L.A. area hams have grown complacent and have accepted it and do not
want it to go away.

The second reason? Nobody will admit it in public, but .435 is also
looked on as a strange find of "entertainment" by the rest of the areas
ham community and even by the general public. And its not just hams
who are listrening. I've walked into offices of business people who
have scanners on their desks locked to 147.435. Law enforcement
listens. News organizations listen and the general public listens.
There seems to be a strange fascination with this Animal Farm ham radio
world -- a fascination that I cannot understand. It is a fascination
that has lead the prestigous LOs Angeles Times to twice do feature
articles on one of its reported inhabitants -- giving good coverage toi
the ".435 lifestyle" of ham radio. Obviously, there is at least one

scanner radio at the LA Times tuned to the 147.435 MHz repeater and at least one reporter listening in -- regularly!

What I worry about is whom else is listening -- and recoirding? And will this be used against us at some WRC by a corporate interest that sees lots of $$$$$ if they can get us removed and relaced by them? I also worry that we will eventually export the .435 mode of operation to other communities.

Ed:

Thanks for your reply.

#1. I am a voting member of IEEE SCC28 and all sub committees, the group that produces the ANSI/IEEE C95 Standard.
#2. I am an elected member of the IEEE SCC28 Executive Committee.
#3. I am an elected member of the IEEE Committee on Man and Radiation.
#4. I am on the Board of Directors and Secretary / Treasurer of the Electromagnetic Energy Association, Washington, DC.
#5. I mantain an extensive public education www page on electromagnetic energy.

I know *exactly* what is going politically and factually across the electromagnetic energy spectrum.

I can appreciate the ARRL political position. When it comes to facts, however, I do not believe it is fair for people to operate in a vacuum.

The following (reposted) are the facts about the FCC "hybred", the C95 standard, why the NCRP Report #86 IS NOT A STANDARD and should not be used, the politics, and comments. Please consider these added to my prior comments on this news thread.

For the ARRL to dismiss the facts in favor of a party line I have seen elsewhere is, in my opinion, an abandonment of science.

Furthermore, you can still be sued regardless of compliance with government regulations, especially a regulation that has more holes than a spaghetti strainer, like the FCC thing. If the EPA does not go along, you are really in for a ride. Look at the legal hay that will be made if the government cannot agree with itself!

---

1. ANSI/IEEE C95.1-1992 is *the only* transnational consensus standard on
human safety with respect to electromagnetic energy. C95.1 IS NOT A
ï¿½THERMALï¿½ STANDARD. In its evolution since 1961, all reported ï¿½effectsï¿½ have been considered in the standards committee deliberations. The consensus votes of all participants have given us the standard we have today.

There are ï¿½non thermalï¿½ effects that passed the triage of scientific validity which are as much a ï¿½partï¿½ of the standard base considerations as are ï¿½thermalï¿½ effects.

The C95 standard process is ongoing. There are now over 2000 scientific papers in a multiyear review process. Those papers surviving the triage of scientific validity will form the base of the next revision. Those papers reporting ï¿½non thermalï¿½ effects are given the same consideration as any other paper.

2. NCRP Report No. 86 is *NOT* a consensus standard. It is *NOT* even a standard. It IS a *report* produced autocratically by a few individuals without the benefit of any consensus committee process. It was a "one shot deal" with no committee or intellectual continuity into the future.

NCRP Report No. 86 uses ANSI C95.1-1982 as a base. Note that the 1982 C95.1 is obsolete and does not represent current thinking. The 1992 C95.1 is contemporary with reality.

Section 17.6 of NCRP Report No. 86 states:

ï¿½This document is based upon literature references published up through the year 1982.ï¿½

3. I see no reason to use or trust any document for human safety with a data base that is now 15 years old and has a spurious origin.

4. There are unusual peculiarities in NCRP Report No. 86.

The discussion on the blood brain barrier in section 10.5, page 141, last paragraph, is odd in that it goes through speculations rather than facts in its deliberations, and concludes with the ï¿½more research is neededï¿½ caveat so common to underemployed researchers but adds little merit to the discussion. Some of the speculations are the discredited calcium efflux window theory and the "less is worse" theory.

Section 17.4.7 reinforces the low frequency modulation scare and touches on the misguided philosophy of ï¿½prudent avoidanceï¿½.

Section 11.1.2.3 through 11.1.2.3.3 really get going on the ï¿½evidenceï¿½ for the frequency and modulation dependent effects of ï¿½windowsï¿½. None of this ï¿½evidenceï¿½ has ever been replicated by anyone other than those connected with the ï¿½evidenceï¿½. It seems that no one else has the skill to replicate these effects? Rubbish. Is it that they cannot be independently replicated?

Section 11.1.3.1.2 is really odd because it is a treatise on the Frolich theory, a theory that has no significance in this physical world.

(I don't think anyone in their right mind would want to be stuck with NCRP junk science.)

I could go on, but I have made my point.

5. Prudent Avoidance: It is my opinion that a very bad book could be written on this paradigm shift. It seemed originally intended to induce suspicion and fear in the 50/60Hz area to generate more research by legitimizing the ï¿½zero risk - have to prove the negativeï¿½ concept. Here it is again! Unfortunately, it is more of a Sci Fi theme that induces stress and stress related illness rather than serve any constructive purpose. Avoid the evil unknown! If you cannot ï¿½prove ï¿½ it is 100% safe, then run. Who cares if you cannot prove it is unsafe! Give to your local research charity! Rubbish, again.

6. What follows next is really strange:

a. The FCC changed horses in mid stream on the RF safety issue by shifting from the proposed ANSI/IEEE C95.1-1992 to a deferment to the EPA for guidance. The EPA Administrator and the FCC Chairman clearly have similar political survival views.

b. The guidance from the EPA is what you see now from the FCC, including an endorsement by the FCC of an EPA employee as the ï¿½expertï¿½ on RF Radiation Safety to whom the public could direct all questions.

c. The EPA Administrator endorsed the FCC (EPA) guidelines in writing.

d. The EPA RF Radiation Safety ï¿½expertï¿½ has now publically condemned the FCC (EPA) RF Radiation Safety Regulations as not protecting the public from ï¿½non-thermalï¿½ effects.

Any guesses how this will play out? Your tax dollars at work, folks!

7. Regardless of the politics, the wellspring of the FCC effort has created a regulation that by virtue of political picking and choosing what the EPA liked,
everyone is stuck with a hermaphroditic bunch of words completely divorced from any scientific rationale. There even arenï¿½t any definitions! You cannot connect their work with anything, regardless of anyoneï¿½s assertions. And now the EPA doesnï¿½t like it! They seem to want worse!

I am pleased the FCC gave everyone a breather. You are going to need it. The show isnï¿½t over yet. The FCC has yet to rule on the technical objections in the petitions for reconsideration.

Thank you for taking the time to read this message.

A friend of mine has recently purchased a Kenwood handheld amateur radio transceiver, model TH-215A, and it was delivered without the Owner's Manual.

I contacted Kenwood, and was told the owner's manual is no longer available.

I am posting this message with the hope of finding someone that can help me obtain a copy of the above mentioned owner's manual.

I will gladly reimburse anyone, who can provide me with a copy of the manual, for expenses related to copying and postage.

If you can help me with this request, please respond by e-mail direct.

Thank you in advance.

In addition to the others consider Amateur & Advanced Communications in
Wilmington, Delaware. It's an old fashioned type store. Don't have the
selection that HRO has but the prices are very good. I don't have the
number offhand but call for the hours. I know they close at 2 PM on
Saturdays. Delaware is a NO TAX state. PA is 6% and in Philly 7%.

` Hi Waheeb...

My name is Carlos Alberto...
I'm amateur radio of Brazil...
I not write english very well, but lets go...
The packet radio is a mode of transmition an reception of
digitals signals..
Amateur radio is a class of people with make conversation from
radio equipment.
We have very others modes.. SSB, CW, RTTY, AMTOR, PACTOR,
GTOR, SSTV, SATELITE....
I hope help you...
See about amateur radio in ALTAVISTA SEARCH in ARRL
Bye Bye...

Source record: 207484

I was listening to frequencies below the AM broadcast band the other day. There are numerous morse code repeating call signs between .2 and .5 mHz. I assume they are beacons. When I looked up their country of origin they are coming from all over the world, including Japan, Russia,
China, Turkey, Italy, Philippines, Chile etc. This part of the spectrum was important in the early days of radio but I cant imagine what beacons in this band would be for now. Does anyone know of a list of these, what their exact location is, what power they are radiating etc.? Also below .2 mHz there are numerous oddly modulated signals reminiscent of LORAN. Does anyone know what these are?

Thanks

They don't...they try to get it at the cheapest price possible.
In an estate sale, you are dealing with a sale under the pressures
of time whereas what you perceive to be fair market value can only
be arrived at when BOTH buyer and seller are not under any
duress associated with the sale.

I followed the HOWTO on AX25... and I compiled my kernel with everything it should need. I obtained the AX25 utils for the 2.0.27 kernel.

axattach /dev/ttyS0 1 produces: TIOCSETD: Invalid argument

then it dies.

Thoughts? It should go like gangbusters, I would think.

Oh... axports:

****

Jim;
I'm using a 135 foot long wire end fed in an "L" shape to give both more length and different pattern. My antenna wire terminates at the corner peak of my house and the antenna is then connected to the center conductor of RG 58 to the MFJ tuner, about 30 of coax. The braid at the antenna wire is grounded and the tuner is grounded. Reports seem to say it works. I also have a multi-band verticle and sometimes one sounds better then the other, and sometimes they sound the same. I could find nothing on this setup, so I thought I'd try it and see. It seems to work fine and all bands tune, but 80meters is a little higher then I like.
Try it, don't solder anything till your sure it works and no other tuning is needed. Solder and seal everything!! Weather proof your conections, they will give better service.

Good luck, 73

>Don
>K1VSK@aol.com

Well, the ground can be inproved (if you have access to the keel
through the bilge). You might consider a copper strap in the bilge
running the length of the boat, or possibly, mounting a copper plate
on the stern.

I have had plenty of boating experience on HF (mostly C.B. before I
became a ham) and can tell you that a good ground is essential to good
operation. Another possibility is using a "trailing" wire for the
ground (anbout 50 feet or so) strung off the stern and attached to the
vessle ground.

I found that often worked real well.

Just for info, after looking at the processed list this morning, it appears
that the FCC has not done ANY from December yet. They are still working on
the WIPS leftover from earlier in the year. All the Vanity applications
processed are dated 11-20-96 OR earlier in the year.

The second item you see in the list is the filing date. for example
K4KY filed 11-20-96 the A indicates former call and the V indicates
"Vanity".
K4NOX filed 10-11-96 E is primary preference list and V.
W5UX filed 06-04-96 B is relative type vanity.
etc.

List of licenses from Wednesday processed 1-8-97.

K4KYI|9611208924531006|C||E|N| |A|V
K4NOX|9610118924453025|C||E|N| |E|V

I don't think you are wrong about all this...

From my experience with consumer and industrial microwave ovens, 60Hz "emf", and high power radar systems, any government regulation or allegation, or even leaked suspicion, that is political and indefensible from a scientific or engineering base, *will* attract unfounded allegations of harm. These allegations usually result in law suits, as we have recently seen in the 60Hz EMF/ cancer scam, the police radar/cancer scam and the cellular telephone/cancer scam, which emotionally favor the plaintiff. This results in people and organizations spending tons of money defending science in court. There are a large number of trial lawyers who feed on these cases, and they seem to make a decent living, at everyone's expense. Underemployed researchers also make out. "More research is needed." Sound familiar? The media and writers really like this stuff, too. It sells!

Just think, if a police radar exposure is well below <1mw/cm2, the power output of a cellular telephone is <1 watt, and 60Hz power absorption is below starlight from a distant galaxy, what chance does anyone think they have with a 50-100w transciever and an evil "star wars" antenna thing on the roof? Taking the FCC regs into court with you will be the biggest joke in history. You cannot use them to back link to anything remotely related to science or a consensus standard. That's because it is a political mess. Actually, its political incest between the FCC and the EPA. However, if the EPA does not unequivocally back down on their current, startling, and deal reneging "non-thermal" condemnation of the FCC, you are really going to get pounded in court. A true lovers' quarrel.

You might try to get the ARRL to defend you. You might try to get the FCC into court with you. What do you think these organizations will say? HA! Too many birds of a feather. What do they care?

My advice is to crank up your homeowner's liability coverage. You may well need it. Your tax dollars at work, folks! I would also pound on your Washington lobby right now.

Anything from acne to zenophobia will be blamed by someone somewhere on amateur radio. Just hope it isn't you.

Good Luck!

719. Washing my hands.....

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-09 00:00:00 UTC
From: n7zzt@goodnet.com
Message-ID: <5b2c19$ips@news.goodnet.com>
Source record: 207591

I wish it to be known the following:

I am washing my hands of the 146.540 Mhz "loose cannons" group of Phoenix, Arizona. I do this on advice from friends and also the wish not to be the victim of rumor and inuendo.

For my part, I also apologize for some remarks said in anger. We all make stupid mistakes from time to time. However, that does not excuse bad operating practices on the part of ALL concerned.

I no longer wish to be the victim of certain "rumors and inuendo". So, I am deleting that frequency from all equipment (including the transceiver currently in the repair shop).

As of Monday, January 5, I bif fairwell to that frequency and will not return to it for some time. It is unfortunate that after my leaving, I am still being accused fo "dastardly deeds". Frankly, I do not wish to hear about it. Any future reference made to 146.540 Mhz (in Arizona) will be, henceforth, ignored.

That concludes my statement.

Good day.

Antonio:
DO NOT buy from Hamtronics in Trevose. Their prices are some of
the highest around. If you do buy there, open each box and make sure
all of the documentation and accesories are there. Also, get them
to power up whatever you're buying and see if it works (I've been
stung a couple of times - get home, plug-in rig or whatever, doesn't
work, drive back to store, etc.).
Do go to HRO in Delaware; reasonable prices, and no tax (I think)

Hi,

Try giving Pembleton Electronics in Fort Wayne area code 219
a call. He had/has tons of old Textronics stuff around. He's
right across the street from the old Magnavox factory and
surpluses a lot of their stuff, and others as well. Not too
big in computers, but about 30,000 sq ft. Closest thing to the
Chicago - Michigan Ave joints of old. Any grins out there?

>quality of the 2m band and even the 70cm band slide downhill.

This is not a unique characteristic of ham radio, but rather, a reflection on life in general. By nearly every measure, our society has declined dramatically from what it was 5 years ago. Used to get 'the bird' if you cut someone off in traffic. Now you get shot instead. It's a crappy world we live in.

Waheeb. For lots of information on Packet and the digital modes -- go to the DX Reference page below.

For What is Amateur Radio and how to become one go to the INDEX Page, then ARRL Home pages. Tons of info for u there. The ARRL will send u a packet of info upon request. See how to get started in Amateur Radio on the ARRL Pages.

Good luck

I just happened to have an old 1967 catalog at my desk and was amused to see a picture of your old 551 sitting next to its enormous power supply. The supply was two thirds the size of the scope and weighed in at 43.5 lbs. I know nothing about these old scopes other than the fact that they were the best there was at the time.

>In reality, and lets be honest about life here...The hams who can
>afford a 1.5KW amp are also the hams who have the money to influence
>decisions at both the FCC and HQ.

>Or did greasing the palm suddenly disappear from our society :)

I would imagine that we can count on the fingers of one hand the number of hams who have offered the FCC money to influence a decision about ham radio policy. The final decisions on FCC policy are made by the Commissioners, who presumably have a lot more at stake than I imagine any ham would offer. If the payola worked to influence the FCC, ham radio would never win out against the big $$$. (And we don't always win, but we have been reasonably successful over the years.)

>Seriously, it happens all the time. Money talks and no-code techs
>walk. At least thats how we are treated by many(not all) coders.

Quite honestly, I don't think that very many people know how rich a no-code Technician is when they talk to him or her. In fact, most of us don't know whether a given Technician has passed a code test or not. In fact, most of don't know whether N1NEW is a Technician, General or Extra.

I also truly hope that "many" doesn't mean "most." I think we all had our opinions about the no-code Technician license as it was being created. Some of us, either directly, or by organizational "representation," offered our opinions to the FCC as the license was proposed. That is fine -- we have that right under the US form of government. However, once the deal was done, it is done. ALL those who have amateur licenses and callsigns are hams. There is no reason to put down no-coders as a class. (Individual put downs are another story altogether -- I imagine that at least a few of them deserve it.)

I believe that most of the "problems" associated with the no-code Technician are not related to Morse Code, or multiple-choice exams. Many of the no-code Technicians are NEW hams. I remember how green I was when I got licensed and expect that most new hams will be in the same boat. In some circles, these new hams are being welcomed into Amateur Radio, and it seems that these areas have fewer problems. In others, they may be treated as second-class citizens and are becoming somewhat alienated. In any event, real life is a combination of the above, and we have a number of new hams who integrate, and probably advance and a number who end up (for whatever reason) somewhat off to the side, feeling that they are not welcome in ham radio.

Unfortunately, the bad feeds on the bad, and we end up with a situation that gets worse instead of better. Maybe what is needed is some patience and understanding on both "sides" of this, with mutual respect and understanding. The old timers bring a lot of experience to the table; the new hams bring fresh enthusiasm and new ideas. Amateur Radio needs both, and to the extent we can combine the best of our strengths, we are better off as a service.

> Jim KC8DXX, Donna and Jen Sens - jdsens@ix.netcom.com

I have had a modified (I added an 80 meter helicoil element) Cushcraft
10-40 meter vertical antenna ground mounted in my back yard for the past
20 years. I installed 3 buried radials each for 10, 15 and 20 meters, 2
buried radials each for 40 and 80 meters and an 11 foot ground rod, all
tied together at the base. It has always worked for contacts on all
bands, in any direction. Reports on all bands have always been 3 to
four
"S" units lower than for my horizontal dipole antennas in their favored
directions, but my signal always gets thru. It has always worked
especially well in talking to other stations who were vertically
polarized,ie: MM in South China Sea. I have one friend in Arizona that I
keep skeds with on 20 meters, and when I cannot hear him with my
Cushcraft ATB-34 beam because of QRM in his direction, I always can work
him with the vertical. Often I transmit back to him with the beam
because he hears me better that way.
Follow all of the manufacturers directions for a counterpoise if you
roof
mount the antenna. Please note that a vertical radiator (with a good
counterpoise ground plane) has an impedance in free space of
approximately 36 ohms. An SWR of 1.4 to 1.7 may be the best match that
you will achieve with a good ground system, but your DX prospects are
much improved with the low angle of radiation and improved radiation
resistance that comes with a "Great" ground reference. Have fun!

Many of these (most it appears) are address changes. In December, it looked as if the FCC had a pretty regular work pattern, trying to get through the backlog of Vanity applications one day a week (Wednesdays, I think it was). So the reports later this week may show more activity.

Happy New Year, all.

I'd like to be able to record (unattended) my favorite radio programs and features for later listening. Something like a VCR with multi-event programming would do the job nicely. Some have suggested using a VCR and a tuner connected to the audio input, but that would require going back and retuning the receiver to different stations between events, which is not possible in this case.

Any ideas? Thank you in advance.
Michael

No question those of you who have passed the code at 13 or 20 wpm have something to be proud of.

But pride alone is not going to let you keep your HF phone frequencies.

Eventually, little by little or all at once, you are going to lose them.

The current public perception will continue to grow that this spectrum is too valuable to waste on a small bunch of weird guys whose only skill is being able to tap out morse code.

You may think that that your argument that hams are necessary for emergencies and civil defense will save "your" phone frequencies. Or maybe that your rag chews amount to meaningful research.

In a time of the internet, cellular telephone and direct satellite connections through Iridium that won't wash with the congress.

You'll be lucky to keep 70 cm and above.

Your only hope is to bring the code free guys like me on board. We have the numbers to lobby for you.

But why should we when you take the selfish attitude that only you should use HF?

Have a nice day.

Too bad about your scope, for it is truly one of the great
classics

"Great"? "Classic"? Hardly!! There are a few early Tek scopes
(pre-465) which could be described with one or both of those
adjectives, but the 551 sure isn't one of them! 511, 545A, 547
maybe, but 551? Abomination would be a better descriptive term
to use. Most people who have worked on 551's would agree that
the 551 serves only to remind us how primitive the technology was
in those days. The fact that something is old does not
necessarily make it either great or classic. Don't let nostalgia
cloud your common sense.

Don Wall

HAMS ON DUTY IN WESTERN US FLOODING

Ham radio is pitching in to help in the wake of serious flooding in the Western US. In California, flooding 50 miles north of Sacramento resulted from a week of torrential rainfall. Tim Tribble, KD6MDV, of the Sacramento, California, City Fire Reserve RACES Operations Center reports that his group was activated noon on Friday, December 27, and has been on 24-hour duty ever since. RACES operators have provided supplemental communication for the Fire Department, including relaying information about water levels at area dams. The hams also have been providing support services, and have even delivered food to out-of-state mutual aid groups.

Tribble reports that up to 40 area amateurs have been manning the command post. Other command posts are located at the Wilton Fire Department and at Station 59 in the Murietta/Sloughouse area of California.

Last Saturday, seven operators were dispatched to the city of Marysville to assist the Department of Fish and Game to assess needs in caring for livestock. Another 10 were sent to aid the Red Cross in damage assessment.

Ham radio has also been assisting in flood recovery efforts in the Northwest, including Oregon, Washington and Nevada. In Oregon, long-distance telephone service to the Ashland-Grants Pass vicinity in the extreme southwestern portion of the state went down when a fiber optic cable was severed. Ham radio took over, linking the county via HF with the state emergency operations center in Salem. Oregon SEC Lew Williams, WD7NML, said Jackson and Josephine counties were the hardest hit. In Jackson County, hams helped provide communication at shelters there. Williams said hams also pitched in during sandbagging operations. In Nevada, Dick Creley, KJ7UK, of Gardnerville reports hams were activated on New Year's Day and provided secondary communication for the Douglas County Sheriff's Department, the Emergency Management Office and two shelters that housed some 50 residents. The approximately 30 hams in Douglas County and Carson City put in a total of 350 work-hours. Creley said damage was extensive, and the cities of Minden and Gardnerville were isolated. Bruce Pfeiffer, N7CPP, of Carson City said telephone service remained in operation, limiting the need for ham radio communication support. His wife Sue Pfeiffer, N7PRF, and Reed Ross, W7HOP, manned a station at the Carson City EOC, while he and Jo Ann Paul, N7MBM, manned a station at a local Carson City shelter.

In Yerington, Nevada, 17-year-old Carrick Dunn, KB7OBE, provided the only communication link between his town and the outside world. (We'll report additional information on ham radio's role in the Western US flooding as it becomes available--Ed.)--Amateur Radio Newsline/Jennifer Gagne, N1TDY

ARRL MEMBERSHIP UP IN 1996!

The ARRL ended 1996 with its largest membership in history, by a very healthy margin. The grand total was 175,023--up 1,461 from the previous month as the result of a membership promotion mailed in November. This is an increase of 3,574--or approximately 2.1%--from a year earlier. ARRL Executive Vice President David Sumner, K1ZZ, called the statistics "not bad for the worst business year for Amateur Radio in recent memory." For purposes of comparison, in 1995 League membership showed a decline of about 0.6%.

Full Membership is up by even more--a bit more than 3.1%--reflecting the second year of the League's effort to identify Associate Members who have earned licenses and therefore are entitled to be Full Members. The figures that follow are based on total membership.

The Southeastern Division is now the largest ARRL division, overtaking the Atlantic Division for the first time. The Rocky Mountain Division posted the largest percentage increase for the fifth time in the past six years.--Dave Sumner, K1ZZ

HEARD ISLAND DXPEDITION TEAM SETS SAIL

The Heard Island DXpedition team has set sail from Reunion Island and is on its way to Heard Island, where it will operate as VK0IR. The 21-member team left last Sunday (January 5) aboard the French vessel Marion Dufresne, and is on schedule to arrive there early on the morning of Sunday, January 12. The team plans to start operating on all bands two days after landing.

The team plans to set up a beacon station as part of the NCDXF beacon system as soon as possible after landing. The beacon will identify itself as VK0IR and will become part of the NCDXF worldwide beacon system that transmits on 14.100, 18.110, 21.150, 24.930 and 28.200 MHz. Each beacon in the system transmits for 10 seconds on each band on a 3-minute cycle.

The VK0IR transmission will begin its 3-minute cycle on 20 meters, 1 minute 10 seconds (1:10 minutes) after the hour (and every 3 minutes after that). It will send VK0IR in CW running 100 W, followed by 1-second-long steady tones at 100, 10, 1 and 0.1 W. Then the Heard Island beacon will move progressively to the next-higher frequency and make similar transmissions, changing bands every 10 seconds, with the 10-meter transmission that completes the cycle starting at 1 minute 10 seconds (1:50 minutes) after the hour (and every 3 minutes after that). The latest beacon information for VK0IR (and for the entire NCDXF system) is available on the Internet at http://www.ncdxf.org/beacon.htm.

Stations are asked to listen for the beacon and report peak times, strength and propagation (ie, short-path, long-path) to ON4UN via e-mail to John Devoldere, ON4UN at john.devoldere@innet.be or via packet to ON4UN @ON4AWP.OVN.BEL.EU. Please be accurate and be brief.

When the team is ready to start operation, ON4UN will immediately post the start time on the Heard reflector (see below).

While on Reunion Island, team members operated as TO0R, primarily on 160 meters. Operation as TO0R/mm has continued as the team heads for Heard Island, a territory of Australia located in the South Indian Ocean. The team expects to leave Heard Island at month's end. On the return sail, the team will stop at Kerguelen Island "for about one day," according to ON4UN. He said the chances of any Kerguelen operation are "minimal."

TO0R and Heard Island (VK0IR) logs are available via the Internet at http://www.aurumtel.com/heard-log.html. Logs for TO0R and VK0IR also will be made available via e-mail at heard-log@ve7tcp.ampr.org (subject line should read HEARD-LOG). QSL both TO0R and VK0IR via W4FRU.

Devoldere reports that the first Amateur Radio activity from Heard Island came in 1947 when Allan Campbell-Drury operated as VK3ACD/Heard. He was on the island for 15 months and returned to the island the two following years. The current DXpedition is believed to be the largest ever mounted and has a $320,000 budget. Last fall, the ARRL Colvin Award Grants Committee authorized a grant of $5000 for the Heard Island DXpedition.

Those interested in having a blow-by-blow account of the DXpedition can send a "subscribe" message (leave subject line blank) to

heard-request@ve7tcp.ampr.org. Late news, logs and information on the DXpedition also is available on the Heard Island home page, http://www.ccnet.com/~cordell/HI/.--digested from the Heard Island reflector

MORE MIREX QSOs

More than 4000 students and members of the US Air Force Academy community in Colorado Springs, Colorado, turned out January 7 to witness a successful QSO between cadets and US Astronaut John Blaha, KC5TZQ, aboard the Russian Mir space station. Signals were crystal clear as Blaha answered students' questions and talked about the bright prospects for continued cooperation between the US and Russia in space.

On January 8, Blaha spoke with students at several different schools in South Africa, thanks to the efforts of Hans van de Groenendaal, ZS5AKV, who provided the linkup. The contact was also simulcast on 7205 kHz. Blaha answered questions from the students, and allowed that he looks at the stars and Earth from a different perspective now that he's been in space.

Other successful MIREX QSOs were completed between Blaha and schools in Mississippi and Florida. On January 8, students at Harper McCaughn Elementary, Diamondhead, Mississippi, got to talk with Blaha. The contact was a tremendous success, and more than 700 students and visitors were on hand (including TV and newspaper reporters) as pupils asked 14 questions. During the contact, the McCaughn team, led by Terry Jones, NZ8C, experimented with switching between a high-gain, 22-element antenna and a simple turnstile antenna.

Students at Geneva Elementary, Geneva, Florida, had a smooth, nine-minute contact with Mir on January 9, and the pupils got to ask 11 questions. Russian Cosmonaut Valery Korzun also said hello to the students. Audio from the contact went out over a local repeater, and the proceedings were taped and broadcast by the school's own cable TV network. Outside news media also visited. Blaha returns to Earth later this month (see related story below).

A scheduled contact January 9 with Emerson Elementary School, Snohomish, Washington, was unsuccessful. Another attempt is set for today (January 10).

Southeastern Division Vice Director Evelyn Gauzens, W4WYR, summed up her feelings about the MIREX successes by loosely paraphrasing Neal Armstrong, the first man to walk on the moon: "Another bold step for ham-kind."--Rosalie White, WA1STO

VERMONT SECTION MANAGER RECALL FAILS

An effort to recall ARRL Vermont Section Manager Justin Barton, WA1ITZ, of Randolph, Vermont, has turned instead into a vote of confidence. Recall ballots were counted January 7 by ARRL staff members under the watchful eyes of representatives of the Arthur Andersen accounting firm and New England Director Tom Frenaye, K1KI. The vote tally was 135 "yes" votes and 257 "no" votes.

The same voting procedure used for director and vice director elections was used in the recall procedure, except that ballots were sent by first-class mail to increase the likelihood of timely delivery during the holiday season. A return envelope bearing the member's address label was provided, along with an inner envelope to hold the ballot. The outer envelopes were opened and the contents removed before the inner envelopes were opened to remove the ballots, to ensure the secrecy of the vote.

Barton was re-elected in May, defeating Ronni Stern, KA1NRR, 234 to 105. The recall petition was submitted last October.

FCC PROPOSES CHANGES TO EXPERIMENTAL RADIO SERVICE

The FCC has proposed changes to the Commission's Experimental Radio Service (Part 5) Regulations (Notice of Proposed Rule Making in ET Docket 96-256). Among the suggested changes were longer license terms, blanket licensing of related multiple experiments by a single entity, and electronic filing of applications. The new rules also would encourage student experiments by issuing licenses to schools as well as to individual students, and by permitting use of additional frequencies.

Among other frequencies, the proposed rules would change the 2450-MHz experimental band to 2402 to 2483.5 MHz and would add 10.0 to 10.5 GHz, raising the possibility that the Amateur Service and the student Experimental Service could end up sharing spectrum.

Comments are due by February 10, 1997.

NEW SECTION MANAGERS

Mike Siegel, KI6PR, of Merced, California, has resigned as San Joaquin Valley section manager, effective January 1, 1997, for health reasons and to spend more time with his family. Assistant Section Manager Don Costello, AB6TA, also of Merced, has been named to replace him. Costello also holds an appointment as a public information coordinator. Siegel, who became SJV section manager in January 1992, will serve as an assistant section manager.

A new section manager has been appointed to fill a vacancy in Idaho. The new SM is Mike Langrell, AA7VR, of Boise.

QSO WITH BLAHA "THE FUNNEST" FOR TEXAS HAM

Jerry Buxton, WB0HUS, ran into John Blaha, KC5TZQ, the other day while driving to work. While monitoring the Mir downlink frequency, he got lucky when Blaha came on the air calling CQ. "I picked up the microphone and answered, and he called me back!" said Buxton, who was clearly thrilled by the experience. "This is the greatest! My first Mir contact!"

Buxton said Blaha had a "good, clear strong signal" into the Fort Worth, Texas, area. "I asked him how his morning was up there. He said they were very busy with their experiments."

Buxton said working Mir from his car was "truly one of the funnest parts of ham radio to me." He said he can't wait until the next SAREX shuttle flight "to see if I can have any luck then." His mobile rig is a Yaesu FT-5200

running 50 W into a 5/8-wave mag-mounted antenna on the roof of his car.

HAM-ASTRONAUT ABOARD FIRST SHUTTLE FLIGHT OF 1997

NASA managers have set Sunday, January 12, as the official launch date for the first shuttle mission of 1997. Aboard the shuttle Atlantis for the STS-81 mission--the fifth in a series of docking missions between the space shuttle and the Russian space station Mir--will be Jerry Linenger, KC5HBR. He'll replace US astronaut John Blaha, KC5TZQ, aboard Mir. Blaha has been on Mir since last September 19, and has been active on 2-meter FM during his mission, which included several successful MIREX contacts with students in late December and early January. Linenger will spend more than four months on Mir before returning to Earth on space shuttle mission STS-84 in mid-May. The STS-81 mission will not carry the SAREX payload. It's not known if Linenger will be active on Amateur Radio, either from the shuttle or from Mir.

The STS-81 launch window opens at 0927 UTC and extends for about 10 minutes. The STS-81 mission is scheduled to last just over 10 days.--NASA

SOLAR FORECAST REVISED DOWNWARD

Solar prognosticator Tad Cook, KT7H, in Seattle, Washington, reports: Last week's bulletin reported that solar flux was expected to peak for the short term in the mid-80s around January 14. That estimate has been revised down a bit to the high 70s on January 13 and 14. Flux values are then expected to drift down gradually to just above 70 around the end of the month. Of course, this is based upon the previous solar rotation, and we never know when a new active region may surprise us and drift into view. Average solar flux this week was about the same as the week previous, but gradually inching upward. Sunspot numbers were up just a little. The solar flux on every day this week was below the average for the past 90 days, which was 76.

Sunspot numbers for January 2 through January 8 were 0, 0, 13, 15, 15, 12 and 0, respectively, with a mean of 7.9. The 10.7-cm flux was 72, 73.3, 73.8, 74.4, 73.1, 73.3 and 73.8, respectively, with a mean of 73.4. The Planetary A indices for the same period were 5, 2, 4, 3, 2, 10, and 7, respectively, with a mean of 4.7.

ARRL OFFERS CLASSES TO GET HAM TICKET IN A WEEKEND

Attention clubs! The ARRL is offering a chance for newcomers to get a Technician-class ticket in a single weekend! Beginning in March, the League will sponsor three Amateur Radio licensing classes, to be held at ARRL Headquarters in Newington, Connecticut!

Classes will cover the Technician-class ticket or General-class theory. In addition to the material required to earn a license, each class will include proper repeater and amateur operating procedures, plus a radio and test-equipment display and demonstration.

Instructing will be Ed Hammond, WN1I, an author and lecturer who's been a ham for 25 years.

Here's the schedule: Technician licensing classes will be held March 14, 15 and 16, and April 11, 12 and 13, 1997. The General theory upgrade class will be held April 25, 26 and 27, 1997. Classes will run from 6 to 10 PM each Friday evening, and from 9 AM to 5 PM each Saturday and Sunday.

Each complete course is $159, which includes the three-day workshops, two books, and study notes, correspondence and study exercises. There also will be pre-class tours of ARRL Headquarters and the W1AW Maxim Memorial station. The course fee also includes lunch and beverages on Saturday and Sunday (hotel reservation includes continental breakfast). Lodging and transportation costs are additional.

For more information or reservations, call (toll-free) 888-277-5289. Advance registration is required.

ROBERT M. STEPHENS, W1MM, SK

One of New England's veteran hams, Bob Stephens, W1MM, of Holyoke, Massachusetts, died December 20, 1996. He was 92. Stephens, first licensed in 1919, was active up until just a few days before he died. He was an Honor Roll DXer and enjoyed CW. In his younger years, Stephens was a quarterback for the University of Nebraska. Services were December 24.--Tom Frenaye,

K1KI/Jack Heffernan, W4HVG

PAST ARRL PRESIDENT CARL L. SMITH, W0BWJ, SK

Past President Carl L. Smith, W0BWJ, died January 9, 1997. He was 78 and had been in poor health for several years. Memorial arrangements have not yet been announced.

Carl Smith's contributions to the ARRL spanned four decades. He served as Colorado SCM in 1955-56, Rocky Mountain Division Vice Director in 1957-58, Director in 1961-70, and was elected Vice President in 1970. He became Honorary Vice President in 1972 and in 1974 was again elected Vice President, moving up to First Vice President in 1980. Under the IARU Constitution then in force, this made him also Vice President of IARU. Smith was First Vice President in November 1983 when President Vic Clark, W4KFC, died in office, and he succeeded Clark as President. He served in that office until the following March.--Dave Sumner, K1ZZ

In Brief:

* Help Wanted: The ARRL Washington, DC, office has an opening for an electronics engineer (BSEE or equivalent experience) with knowledge of or a desire to learn radio spectrum management. Duties to include representing the interests of Amateur Radio to US government agencies, the ITU and regional organizations. Public-speaking experience, professional-quality writing and the ability to deal with people on an international basis is required. Spanish-language skills are a plus. Send resume and salary expectations to R. Boucher, ARRL, 225 Main St, Newington, CT. 06111; fax 860-594-0298.

* Vanity Update: The vanity program is continuing to be popular. The FCC office in Gettysburg reports it received 1273 vanity call sign applications (585 paper, 688 electronic) during December. The FCC has not announced when Gate 3 will open.

* Quello to leave FCC: FCC Commissioner Jim Quello has announced he won't seek appointment to another term. His most recent term expired last June, but he remains in office until a successor is confirmed. The 82-year-old Democrat generally is regarded as a champion of broadcasters. He's been on the FCC for 23 years.

* Gordienko moves on: QST Assistant Contest Manager Al Gordienko, K1PI (ex-KF2FB), is leaving January 17 to take a position in the MIS department of Waterbury Rolling Mills Inc in Waterbury, Connecticut. A native of Russia, Gordienko formerly was active from club station UZ4FWD. He previously worked in the ARRL VEC Department.

* Mir frequency swap: Astronaut John Blaha, KC5TZQ, has announced that, as of January 1, 1997, the 2-meter voice and packet frequencies for the Mir space station would change from 145.800-MHz uplink and 145.200-MHz downlink to 145.800-MHz downlink and 145.200-MHz uplink for ground stations. These

frequencies are for both FM voice and packet operations.--AMSAT News Service

* Ham-astronaut wins photo award: Astronaut Jay Apt, N5QWL, photographed the first and second-place photos in the "Space" category in the aerospace industry trade magazine Aviation Week and Space Technology's annual year-end photo issue for 1996--and they weren't even photos from space! First-place winner is a time exposure shot of the Grumman Gulfstream 2 Shuttle Training Aircraft doing touch-and-go's at night at the Kennedy Space Center. The second-place winner is a T-38 training jet's back seat point of view of a Titan IV launch shortly before the STS-79 crew arrived at the Cape. The photos are on pages 48-50 of the issue cover-dated December 23/30, 1996.--Philip Chien, KC4YER

* AMSAT-Italia aboard ARISS: Paolo Pitacco, IW3QBN, the president of AMSAT-Italia has signed the memorandum of understanding for ARISS--Amateur Radio on the International Space Station. A conference of representatives from several countries worked out the agreement last November. The memorandum of understanding supported cooperation in the development of ARISS.--Rosalie White, WA1STO

* RCI to remain on the air: To paraphrase Mark Twain, reports of the demise of Radio Canada International were premature (see The ARRL Letter, Vol. 16, No. 1). In mid-December, Canadian Heritage Minister Sheila Copps reversed CBC president Perrin Beatty's decision to close Radio Canada International. Under an agreement, the Canadian government will provide permanent funding to keep the foreign broadcasting service on the air. Radio Canada broadcasts in seven languages. Its 125 employees had already been given termination notices when the reprieve was worked out.--From Canadian press reports

* Ham float wins Rose Parade award: A parade float carrying a working Amateur Radio station won the Queen's Trophy for its interest and originality in the 1997 Tournament of Roses Parade on New Year's Day. The Edison International float, "150 Years of Lighting the Way," carried members of the Edison Amateur Radio Network, who operated using the club call sign, WB6UCD. The float's sponsor was Edison International, the holding company for the Southern California Edison Company (see "Up Front in QST," January 1997, page 19).--Amateur Radio Newsline

* NJ traffic-handler awards: The annual New Jersey Traffic Awards were presented December 7, 1996, during the New Jersey Traffic Handlers' convention in Trenton. The W2UEZ Rookie of the Year award winner was Gary Metzger, WB2RPW. The K2SE VHF Traffic Award went to Jean Renomeron, N2VQA. Ray Czyzewski Jr, WA2SEI, garnered the W2SWE Traffic Handler of the Year honors. Each received an engraved plaque that honors the memory of the three awards' namesakes.--The Hudson Loop/Michael Karp, N2FM

* Youth net: A 75-meter youth net meets on 3970 kHz Sundays at 2030 UTC. For more information, contact Jack Hamm, N1REU, 806 Bay Rd, Stoughton, MA 02072; e-mail n1reu@ amsat.org.--Amateur Radio Newsline

* Adventurer gives up solo Antarctic walk: British adventurer Sir Ranulph Fiennes has given up his attempt to walk across Antarctica after completing

about a quarter of the trip. Fiennes is suffering from kidney stones. The walk was to raise money for cancer research. Morag Howell, GM0MUV, was active as VP8CME from Antarctica as part of Fiennes's expedition, serving as the Antarctic base leader.--CBC News

Nope.
When you fill out the application for a vanity call, you are also
requesting that your current call sign be vacated. You give up the old
call for the new one.

Now THIS is interesting...the same people who adamantly opposed the very creation of the no-code Technician class are now sponsoring and ENCOURAGING people to be come no-code Techs? Hmmm...there must be a reason...

>Each complete course is $159

BINGO! There's the reason! $$$$$$$$$$$$$$ for the ARRL!

$159 for instruction on how to pass the Technician license? Are you kidding?
As in the same license which can easily be passed by simply buying the Gordon West book for $10 and spending the weekend reading the material?

Hello -

Is it possible to send email from standard Internet email to a packet address? I have a friend who is not on internet but is on packet, and I no longer have packet capabilities. I suppose I could just try it, but I thought I'd ask forst and see if it was a: possible, and b: acceptable in the amateur community.

Thanks for responses,
Terry

>
>73, Jim KH2D

They might not be Alphas, but they are 1000 watt PEP. No, I never ran them at full duty cycle. I ran them on SSB *only*. For that purpose they suited my needs just fine. They each loaded up to about 800 watts on voice peaks. As I said, antenna changes and a loss of desire to fight the "big guns" over DX no longer warranted a need in having a linear.

With all due respect, most of us pro-coders are happy staying in
.policy. Its only when the anti-coders realize they are outnumbered
do they attempt to bring in others to the foray by cross-posting to
inappropriate groups.

Special Bulletin 2 ARLX002
From ARRL Headquarters
Newington CT January 11, 1997
To all radio amateurs

SB SPCL ARL ARLX002
ARLX002 Past ARRL President SK

Past President Carl L. Smith, W0BWJ, died January 9, 1997. He was 78 and had been in poor health for several years. Services will be held Sunday, January 12, at 2 PM at Montclair Methodist Church, 12th Newport, in Denver. Arrangements are being made by Horan-McContahy, 1091 S Colorado Blvd, Denver.

Carl Smith's contributions to the ARRL spanned four decades. He served as Colorado SCM in 1955-56, Rocky Mountain Division Vice Director in 1957-58, Director in 1961-70, and was elected Vice President in 1970. He became Honorary Vice President in 1972 and in 1974 was again elected Vice President, moving up to First Vice President in 1980 (and also Vice President of IARU). Smith was a member of the successful IARU WARC-79 team. He was First Vice President in November 1983 when President Vic Clark, W4KFC, died in office, and he succeeded Clark as President. He served in that office until the following March.

As a pilot for Western Airlines, Smith made news in the 1970s when he safely landed a fully loaded Boeing 707 passenger jet that had a jammed nose wheel on a foamed runway at Honolulu International Airport.

760. Vanity Call with New Address?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-10 00:00:00 UTC
From: John Reynolds <johnrey@vnd.tek.com>
Message-ID: <32D6EB03.7788@vnd.tek.com>
Source record: 207382

My extra class license is up for renewal in a few months and I'd like to get a new vanity call sign. So I downloaded the list of available calls from the QRZ web page and the 610v form from the ARRL web page. Now I've run into a potential snag. The 610v instructions say that "the name and address on the 610v form _must_ match the name and address on the current license". Oops, I no longer live at the address shown on my license...

So, what's my best course of action? Do I need to submit a 610 with a change of address request, wait for a new license to be issued and *then* submit the vanity call request? Yikes, that could take months! Or is there a better way to handle this?

Thanks for any insight,
John Reynolds NZ7J

It was hilareous hearing "Paul Harvey radio show" talking about this
today (Fri. 1/10). If not familiar, he's been a talk show on AM radio
for many years and I just happened to catch the program with this top
today while at my office. I'm still laughing. He mentioned this with
such astonishment etc etc and added his quandry and mentioned the 1934
Act and 1996 Telecommunications Act as to the illegality of taping from

scanners and submitting to any news, and the person taped the conversation from a police scanner. Paul harvey was so hilareous. He could not fathom one just happening to have nothing to do but sit around a scanner and catch an entire conversation as well as tape record it. He wanted to know just what kind of person this is and is this for real. He would never let go of that "scanner" as mentioned over and over in very astonishing tones of voice.

>a license." This applies to ALL classes of license ... even extra.

And you completely distort reality by ignoring the fact that if I want
to ignore information about <insert_topic_here> that you effectively
force me to score a higher score on the theory examination, since I
have to overcompensate in other knowledge areas to make up the difference.

>The same is NOT true of CW ... it's the ONLY mode with its own pass/fail
>test element.

If the code bothers you so much Carl why not petition the ARRL and
W5YI VECs under the Freedom of Information Act to make the text of all
code examinations, and all questions asked, a matter of public record?
(I mean, after all, this is the same logic that people use to justify
making the theory examination question pools public knowledge). Then
you can just memorize them like I do the question pools.

>To me, and many others, it is absurd that someone can become an extra
>without knowing anything about, by your example, RTTY (or any other
>technical aspect of radio communications, for that matter.)

Welp, I've been saying for a long time that the theory examinations are
nothing but a joke, but your fellow Codeless-HF enthusiast, Gary,
seems to think that they are just fine. Perhaps rather than complaining
about the code the two of you could come to a consensus on the theory
portion of the hobby, then we can talk about the code.

>This is SUPPOSED (per ITU definitions, as well as a lot of FCC verbage) to
>be a TECHNICAL activity ... with public service aspects.

97.1 seems to disagree with you. (Why start spouting ITU definitions now,
you seem to be so keen on ignoring the part of ITU definitions (like a
code test) that you don't like...)

>Please stop insisting on perverting it into something that it was never
>intended to be ("just a hobby") ... that attitude and the "code forever"
>attitude are the two most destructive things in ham radio.

I daresay that a majority of hams today see amateur radio as nothing more than a hobby. And, apparently, most of them also support the "code forever" attitude. Whoops. Sux to be you, eh, Carl?

You can get the description of MD2, and many more encryption
algorithms in the best book around about such things:

"Applied Cryptography, Second Edition
Protocols, Algorithms, and Source Code in C"
By Bruce Schneier
John Wiley & Sons, Inc.
ISBN 0-471-12845-7

This is a great book if you are involved with cryptography or
encryption algorighms. Lots of fascinating stuff, a lot of it
is quite technical, but explained so well that even non-math
majors will understand and can use.

And what could this method possibly be? Consider the HF radio
installation in my car: Could I model this on a computer? Could I
measure absolute field strength everywhere in my car? If so, how
shall I find the "worst case"? Do you or the FCC know of some
technology which can easily and inexpensively implemented which can
determine compliance in all situations?

>We have always been at risk for EMF lawsuits. The existance of standards
>and the old regulations would be enough for some who hate your antenna to

>evalation and taken all steps required of you by the law is a pretty darn
>good one. Much better than "I think it is safe," as you might have to
>say if asked the question today.

But isn't the answer to that question still "I think it is safe", even
after you've done the Environmental Assessment study? Can safety be
determined in all circumstances? Can you study every single situation
of RF radiation from a car? Consider a ham who loads up the gutter
on his townhouse: Can exposure be accurately determined in all cases,
even when one can't accurately measure or predict the field strength
in his neighbor's houses?

Don't you think a court of law is going to question everything about
an Environmental Assessment? Doesn't this obligate hams to a degree
of accuracy which is difficult, if not impossible, for the average
hobbyist to comply with?

>The IEEE standard probably has the broadest concensus. The FCC regs are
>a "hybrid" between the IEEE standard and the standard offered by the
>NCRP. The regs, however, are a bit MORE strigent than the IEEE standard,
>forming a pretty good link to that standard (in the context we are

>discussing), IMHO.

But don't you think this "standard" as applied to the law is just a bit arbitrary? Why is it that under these regulations I can ride in a company car with a 100 watt FM transmitter on 44 MHz and need no Environmental Assessment, yet any time I transmit from my car at 50 Watts and up on HF sideband I need an Environmental Assessment? Shouldn't the law be as consistent as the "standard"?

And regardless of what the standard says, is it enforceable? Can it be accurately and independently verified? Is it even reasonable, given the typical RF exposure the average person gets in our society? (That's a subject in itself!)

These are not idle questions. I want to comply with the law. But in all honesty, as an electrical engineer and a ham with over 20 years experience, I can't see how I could comply with these new laws as applied to ham radio without having the cards stacked against me if I were to be dragged in to court.

We as hams were better off when there were no regulations requiring us to assess RF radiation at all. Back then we shrugged our shoulders and said "duh?" with some authority. But since it's unlikely that hams will get such an exception, I think the ARRL should ask the FCC to do some testing and establish some average power/antenna gain & proximity rules, as an alternative to conducting an Environmental Assessment. Maybe then I'd have fewer questions, and a court of law would have less to argue about.

To all radio amateurs

SB PROP ARL ARLP002
ARLP002 Propagation de KT7H

Last week's bulletin reported that solar flux was expected to peak for the short term in the mid-eighties around January 14. That estimate has been revised down a bit to the high seventies on January 13 and 14. Flux values are then expected to drift down gradually to just above seventy around the end of the month. Of course this is based upon the previous solar rotation, and we never know when a new active region may surprise us and drift into view.

Average solar flux this week was about the same as the week previous, but gradually inching upward. Sunspot numbers were up just a little. The solar flux on every day this week was below the average for the past 90 days, which was 76.

Sunspot Numbers for January 2 through 8 were 0, 0, 13, 15, 15, 12 and 0 with a mean of 7.9. 10.7 cm flux was 72, 73.3, 73.8, 74.4, 73.1, 73.3 and 73.8, with a mean of 73.4. Planetary A indices for the same period were 5, 2, 4, 3, 2, 10, and 7, with a mean of 4.7.

Greetings. I am looking for a copy of the manual and schematic for the KDK FM-4033 220MHz mobile rig. My radio needs service, as the receiver is off-frequency by about 100Hz, and I don't know where the RX frequency adjustment is located (if it indeed has one). Right now I have to tune off freq. with the RIT 100Hz to work a repeater. Funny, though - even though I'm dialed off for the RX, the TX is still dead-on, split and all. Maybe this rig has a real RIT circuit (hi-hi). Any help here is appreciated, and I'll be glad to reimburse any expenses incurred for the copy and postage.

You will have to contact the cruise line to get their permission to
operate on board. Of course the ultimate authority for permission
rests with the captain and chief radio oeprator. Check with them as
soon after you board as possible.

After reading the above, I thought it might be best to say that *I* have always kept an accurate log of all my activity on HF. Other interests have taken me away from amatuer radio from time to time, and at one point my I didn't even have the radio turned on for nearly two years! I say this because If I would disconnect my radio, the antennas would still be there. Who's to say someone might say that because I'm a ham radio operator, my transmissions caused his/her cancer to develop. At least a log book would be some sort of proof, unless a judge would say it's inadmissible.

If it varies with engine, it's probably not the fuel pump, which would be
constant. I had a problem like this a while back...one of the diodes in
the alternator was bad, putting an AC component in the electrical system.
Nothing short of replacing the alternator would do any good (guess I coulda
replaced just the bad diode...). One good thing...everyone on the repeater
knew it was me as soon as I keyed up...couldn't even anonymously kerchunk the
rptr ;-)

Hi!
If you want a program that makes great circle maps - take a look at
http://hem.passagen.se/sm3gsj

This is a new version 2.3 of GCMWIN. An older version (2.2) is
available at the ARRL bbs and varoius other sources!

The update fixes some bugs in the 2.2 version and adds a few new
functions. Coming in the next release is the possibility to "offset"
the map. (The center of the gcm map may be moved.)

The program is FREEWARE !

73 /Roger SM3GSJ

Over the past 3 months I have been surveying hams at my web site
http://www.sarrio.com as to why they chose not to join the ARRL.
Differences in ham policy and the yearly dues were the main reasons why
those polled said they were not members of the ARRL. Now I am asking
Those who are members, Why did you join? Below are the most recent resuts.

Why are you a member of the ARRL?

Over the last 3 months I have surveyed hams on the reasons why they
chose not to joined the ARRL. During the next 3 months, The Ham
Poll will be asking those hams who have joined the ARRL for their
reasons.

Below are five possible reasons why you chose to be a member of the
ARRL. Please check the box below that is, in your opinion, the most
important reason for joining the ARRL.

The results:

Ham radio legal defense|***** 5
Subscription to QST|********* 9
Ham Radio political action|********** 10
ARRL sponsorships (conventions, contests, W1AW ect..)|** 2
Recommended by a ham radio friends |* 1

Total votes displayed: 27

All are welcome to express their views on this issue. If I have left out a
significant reason e-mail me and I'll add it to my ham opinion page. 73's

I suppose you can get those "slam-bam-thank-you-mam" type postcard
exchange QSOs, but you really can't communicate much beyond that.
Morse code ain't a language. Q signals aren't a language.

Goodness, this says a lot.

Roger, why don't you just amble on over to DejaNews and do a
power search of rec.radio.amateur.*, searching for messages
contain phrases like "lazy" "welfare mentality" "no brain"
"whine" "whining" "stupid" "CBer" "know-nothing" "KF2TI" and the like?
You'll discover that a great many messages have been written condemning,
insulting and otherwise flaming amateurs simply because they don't have
code credit.

In fact, you may discover that there are easily as many vocal,
abrasive "pro-codes" spewing all kind of sterotypes that erode
respect, just like you comment on.

Now, I'm amazed that you conclude "no-coders" are more likely
to jam you on HF. Goodness, one would expect that most "no-coders"
don't even have HF radios. Perhaps you should consider that those
"no-coders" have at least as much reason to suspect the "pro-coders"
as the people that jam repeaters. Afterall, there's been a lot
of flames generated by those pro-coders...

Source record: 207490

Name: Randy Love, WF5X
E-Mail: wf5x@interserv.com
Subject: Any info about county/state sponsered ham repeaters
Body of Message:

Greetings fellow Skywarn chasers/spotters:

I have recently moved to Michigan from Arkansas.
Back there I did lots of spotting and
chasing in the NW Ark / NE Okla area mostly
for SkyWarn purposes. What I need to know
is a question that was put to me by the Director
of the Office of Emergency Management here in
my new home of Oakland County, MI. She thinks
that the county will sponsor a repeater for the
ARPSC (Amateur Radio Public Service Corp)
(very akin to ARES/RACES) here for SkyWarn and
Public Service use. They would even put it on a
county tower and do ALL the maintenance for it...
put here is the catch.. and where YOU can help.

What I need to know is ANY information about any
county/city/state government that has either
sponsored repeaters/systems or donated them to
amateur radio groups for use in Skywarn or public
service. I believe that I saw somewhere that the City
of Wichita Falls, TX bought 2 or 3 repeaters system
for the local Skywarn group there after the major
tornadoes that went through in the mid '70's..

Please send me via e-mail or here any information
you may have about such systems being donated or
maintained by a government entity...

Thanks very much in advance,
73, good chasing, and BE SAFE de
Randy WF5X

784. www.hamradio-online.com: FCC CREATES 300 MHZ of UNLICENSED spectrum

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-10 00:00:00 UTC
From: vbook@vbook.com
Message-ID: <5b4jhs$nlq@kanga.accessone.com>
Source record: 207496
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew

Today, the FCC issued a Report and Order creating three 100 MHz wide bands in the 5 GHz area for use by unlicensed wireless devices. The bands include changes to the rules in the Amateur shared allocation at 5.725 to 5.825 GHz. Under the new rules, unlicensed devices may operate up to 4 watts EIRP (depending on the band) and may optionally use high gain directional antennas (depending on the band).

Today's ruling make possible high speed wireless Internet access over potentially several miles. You can expect to see unlicensed wireless T-1 (1.544 Mbps links) service drastically undercutting the costs of renting T-1 lines from local phone companies (often $3,000 per month). Many other applications are expected to be deployed under the new rules on the new frequencies.

This is a tremendously important announcement in terms of the future of Internet access and short range wireless communications. It also involves the Amateur service as one of the three bands is shared with Amateur Radio.

We have the FCC press release and full text of the Report and Order at http://www.hamradio-online.com

785. D.C. CELLULAR NIGHTMARE

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-10 00:00:00 UTC
From: confused@primenet.com
Message-ID: <confused-0901972338440001@news.primenet.com>
Source record: 207497

GINGRICH'S CELL PHONE NIGHTMARE

Political scandal has come crashing into the digital age. The NEW YORK TIMES kept everyone in Washington, DC up late on Thursday by publishing extended excerpts of an audio tape that captured Newt Gingrich in a conference call with others on the morning of his ethical mea culpa.

The call was picked up on a police scanner in Florida.

The conference call was over how to counter the inevitable Democratic attacks and how to time the admission with newspaper and evening news cycles. The call caught on tape provides top insights into the methods and intensity of spin used to calm and convince the public mass. It is proving to be a complete embarrassment for the Republican leadership.

"Oh my lord -- why is anyone talking on a cell phone," a Republican source on the Hill told the DRUDGE REPORT after getting briefed on the TIMES bullet.

The phone transmission originated from one of the participants in the strategy talk, who was no doubt taking a Christmas break in the sunshine state. Newt was at is home in Georgia; others taking part were in Washington. The TIMES says the tape was given to them by a Democratic congressman who was slipped the goods by a couple in Florida who overheard the call on their scanner. Calling James Bond.

(It should be noted that it is a federal crime to make audio recordings of any and all activities that occur on such scanners.)

Gingrich being caught on tape is a twisted irony. Leading Republicans on Capitol Hill have recently issued warnings to all staffers about the dangers of talking on cell phones in the current partisan-charged Washington, DC atmosphere. The National Enquirer's public announcement that they were soon going to open a Washington bureau also added to the growing cell phone fears.<

I find HRO to be a bit pricy on some things, except radios. Maybe not as bad as Hamtronics, I've never been there.

Two others:

Amateur & Advanced, on Rt 202 about a mile North of I-95, on the west side of the road, in the rear of a white block building. Look for a radio tower with a vertical on it.

Also, Denver Radio Supply near Ephrata & Denver PA, about 45 minutes from Phila.

>(Stann4GUX@aol.com)

I have a TM-701A since new and right out of the box it had the same problem. I took it to Kenwood service and they replaced the mike capsule and realigned the mike gain and deviation levels. The radio is fine now after 5 years.

Even though I was out of the factory warranty, Kenwood replaced the mike free of charges.

As a rule of thumb, a clean used rig in good operating condition is worth about 60-75% of the current price of a new one. Older rigs not currently marketed are worth correspondingly less. The only catch is that some older equipment has achieved "collectable" status, and may be worth a lot more. Generally if you're dealing with Collins, Johnson, or Drake gear, some models may be worth quite a bit. You can surf around the rec.radio hierarchy and find what folks are asking for equipment like you're trying to value. There are also web sites dedicated to collectable classics. Best of luck.

>
>-> They aren't breaking the law, but I feel the quality
>
>Yes, they are (USA).

I doubt that very much. In the first place, why are you assuming that they're *not* using minimum power by using the repeater? For example, I can work a certain friend simplex, if we fire up the amps and swing the beams, but I can also work him with the 200 mW HT via the repeater. The favorable antenna location of the repeater makes it a much more efficient range extender than high power simplex. So it is either two 1.5 kW simplex stations, or it is a 200 mW HT, a 50 watt repeater, and a 5 watt HT, 3 kW versus 55.2 watts. Which one is using minimum power necessary?

Now we have to do forward scatter over intervening ridges, and that may not be typical, but consider the more mundane case where you need the power of a 45 watt class rig to make the contact simplex. You're still using a total of 90 watts compared to the 60 watts you'd be using total by running the rigs on their 5 watt settings and using the superior antenna location of the repeater to achieve the contact.

Unless you are literally in HT->HT range, you'll almost always use less total power by going through the repeater rather than attempting the contact via simplex. But the rule, 97.313(a), actually says that an amateur *station* must use the minimum power necessary to carry out the *desired* communications. It is not concerned with the total power of a number of stations, just the one transmitting under your control. So we don't care about the total power emitted by a number of stations, just the one you are operating.

Now if the desired communications is to use the repeater, then each *station* is in compliance if it runs just enough power to achieve quieting of the repeater receiver. The amount of power the repeater may be running is irrelevant to users because it is *not their station*.

That's the responsibility of the repeater station owner to make sure his repeater is only running enough power to achieve quieting in his users' receivers. The accepted way to do that is to select a desired Grade A service contour and use the amount of power necessary to achieve quieting in a receiver of a specified sensitivity and specified antenna gain operating line of sight anywhere within that contour.

Repeater owners typically assume worst case, a HT using a rubber dummy load, as the specified receiver and antenna on which to base their Grade A contour, though some may opt to assume a typical mobile installation as their specified receiver instead (I do with my repeater). If in addition they obey 97.101(a), which requires using good engineering practice, they will try to achieve reciprocal operation, IE the same HT plus rubber dummy load will achieve quieting in their repeater receiver at the same points where the repeater's signal will achieve quieting on the HT.

For a well engineered repeater, that's a fairly low power, in fact it should be on the same order as the power run by the typical user station chosen as the contour reference. If anyone is violating the minimum power rule, it is those repeater station operators running "alligator" repeaters, IE all mouth and no ears. Any repeater running more than 45-50 watts, unless it was engineered to service high power base stations as its typical user, is almost certainly an alligator and is in violation of 97.313(a). Using it does *not* put a user station in violation of 97.313(a), however, unless the user is also running excessive power *at his station*.

A well reasoned argument.

However, you are assuming that the repeater is only intended to cover a primary service area, and that within that area, it is designed for fully
quietening both repeater and user receivers.

In some applications, (perticularly out in the wilds) repeaters are intended
to cover as large an area as possible. In this case, if a typical user (5W, HT, Rubby Ducky) can just get an S1/S2 signal into the repeater, then
using your reciprocal argument, he would receive an S1/S2 signal from the
repeater. This *might* be acceptable, if the second station is fully quietening
into the repeater. However, if the second station is also in a fringe area, an
S1/S2 signal into the repeater, which is then received at S1/S2 itself is going to
be pretty poor comms. quality.

I would agree with your arguments when a repeater is designed to cover just a specific
area, and probably at all times in an urban area. However, repeaters

such as the one on
Mt Hood in Oregon are designed to cover vast areas covered by nothing
else. In this
sort of case, there is a good case to be made for the repeater having
somewhat bigger
"mouth" than "ears".

I appreciate the notion of topical discussion groups. However, Gary is
quite correct, there have been many abuses of the newsgroups. I find
this *quite* ironic, given that radio amateurs are supposed to be
capable of policing ourselves, but that's another issue.

rec.radio.amateur.policy has never needed to be the constant flame war
that it is. It is ironic that amateurs are supposed to be good at spreading
goodwill, too...

If the users of the more popular newsgroups would take a few moments to
consider that the newsgroups are as good as we make them, perhaps we
could improve the mess that misc and policy are.

I'm all for creating a ham-radio flame group; there is one poorly
propagated alt.ham-radio.flame, I wish it were better used. Heck,
I'd love to go stir it up in a flame group, something I really try
to avoid in the current groups (am I the only one?) ;-)

My friend KA9DQQ (Dick) has the below equipment for sale.
He resides in Wausau, Wisconsin USA

Ten Tec Model 705/705A Electret Condenser Microphone
Ten Tec Model 585 Paragon All-Band HF Transceiver
Ten Tec Model 253 2 Kilowatt Automatic Antenna Tuner
Ten Tec 9420 Power Supply
Hercules II Model 420 Solid State Linear Amplifier

All Ownerï¿½s Manuals Included.
System Completely Rack Mounted.

Price $3,600.00 Plus Shipping/Handling/Insurance.

I am posting this for him, please call him for any additional
information.

Pricing on above equipment should be confirmed with KA9DQQ.
Final price is subject to his approval.
I reserve the right that if a typographical error occurred, it was
not made to misrepresent KA9DQQ or misguide the reader of
this posting. Laymanï¿½s termsï¿½ I am not the best of typists.

KA9DQQï¿½s personal information is as follows:

Email: elmer5@juno.com
Phone: 715-848-8095

Thank you for your time and attention.

>So what if there's trafficking? The whole thing is about getting the
>callsign that you want right? It's also about money, the more the
>callsign is transferred, the more money Uncle Sam gets. Good way to
>reduce the deficit. We should go back and change that to one year.

I asked Roland that if he didn't mind seeing trafficking in callsigns, if he would be willing to endure the spectacle of some 1x2's (such as W1DX and W5EE) going on the open-market for upwards of 6 digits. Considering that some hard-core DX'ers may easily spend that on station equipment, it's not inconceivable for the "just right" contest callsign go for $100,000 or more. Somehow I get the impression that that's not what we are all about. At the very least, it would be a distasteful and distractive public spectacle that would tarnish our non-profit, public-service image. That commercial radio users engage in this practice is certainly not a valid excuse either.

Roland said he didn't see any problem with that. His repeated statements about it "being all about money" and "making more profit for Yaesu and Kenwood" makes me wonder if he is just trying to yank our chain with a cynical, trolling argument. Roland also doesn't seem to understand that we have budget deficits because we are bleeding ourselves dry with welfare to the middle-class (entitlements) which we vote ourselves year after year, not that we don't have enough tax revenue. Furthermore, more money into the general Treasury hopper would just be more temptation to dole it out in bigger helpings (and I freely admit my complicity in this self-destruction, having taken financial aid for college and availed myself of many other government-subsidized services in the past). There is no obligation to spend tax revenue streams on the groups that provide that revenue. We are also selling off precious, publicly-owned, resources (public land and radio frequency spectrum) that will raise but a pittance in the overall budget picture, but will represent a far greater, and permanent, loss to our national heritage. That is certainly a short-term gain/long-term loss situation and indicates that no, it is certainly *NOT* all about money, even in a free market society.

By ELAINE WALKER
Herald Staff Writer

The would-be owner of Hollywood's police radio tower has a penchant for collecting discarded police radios and communications equipment that keeps landing him in trouble.

Alan Leonard, a felon out on parole, is being investigated by the FBI for computer fraud and copyright infringement. That was news to Hollywood
city officials, who managed Monday to get Leonard to drop any claim to the police tower.

``The city doesn't want to have anything to do with people like him,'' City Manager Sam Finz said. ``The good news is we're not going to be Doing business with him anymore.''

According to an affidavit filed Dec. 10 in U.S. District Court in Miami by FBI Agent Kathleen Antona, investigators believe that Leonard may be manufacturing and cloning Motorola radios, then selling them as the real thing.

Reached at his home Monday, Leonard declined to comment. ``I would really like to talk to my attorney before I go any further.''

The FBI raided Leonard's Miami home and the offices of his business, Communications Electronics Engineering of Miami, on Dec. 13. A collection of Motorola radios, computer equipment and diskettes was seized.

As of Monday, the FBI has not filed any charges against Leonard, and the investigation remains ongoing, acting spokeswoman Anne Figueiras said.

``I don't believe we've done anything since the search warrant was executed,'' said Figueiras, who would not discuss the nature of the investigation.

Documents show that the FBI investigation began in January 1996, after a call from Joe Krause, an attorney for Motorola.

Krause told the FBI that he suspected that Leonard was in illegal possession of Motorola software, which he was illegally using to program Motorola radios.

After Krause's complaint, the agent Antona, who specialized in high-technology crime, turned her attention to Leonard's business practices.

Antona's review found probable cause to believe that more than eight times during the last year, Leonard has assembled Motorola radios from used or scrapped Motorola radio parts, federal court documents show.

The FBI claims that he then used a computer and illegally acquired Motorola software to program the radios, which he allegedly sold as genuine Motorola radios, without permission from the company.

``Alan Leonard has willfully and for purposes of commercial advantage and private financial gain embarked on a scheme to defraud Motorola and Motorola's legitimate customers,'' Antona wrote in her request for a search warrant.

Antona also found probable cause to believe that Leonard made unauthorized changes to the radio programming software contained in the Motorola radios.

The changes give Leonard the capability of producing, using and selling radios that can access -- illegally -- the Motorola communication system used by the FBI and other local law enforcement agencies, the affidavit said.

This is not Leonard's first brush with the law.

He was convicted on charges of second-degree murder, conspiracy and attempted robbery with a firearm for participation in the Feb. 17, 1978, attempted robbery at the Round Table Restaurant in Coral Gables. Leonard's two companions in that incident -- one of whom was a police informant -- were killed in a shootout with Coral Gables police.

Leonard's parole officer, Nanette Russell, told the FBI that during the past few years she has received inquiries from at least three South Florida law enforcement agencies about Leonard's business practices.

The inquiries concerned Leonard's allegedly illegal operation of businesses where he sold police equipment, badges and ``police-type'' portable radios.

By comparison, Leonard's controversy in Hollywood is small scale.

Leonard claimed that the police communications tower was part of a collection of surplus communications and radio equipment that he bought from Hollywood in December 1995 for $500.

After vowing last week to fight for the tower, Leonard suddenly backed off at a meeting Monday with city officials. He signed an agreement releasing any claim to the police tower -- or any other towers owned by the city.

Finz said Leonard told city officials Monday in a closed-door meeting that he realized that the police tower was never supposed to be included as part of the surplus equipment.

Source record: 207317

Everyone seems to have overlooked the obvious in this situation: Since the problem only recently developed and is intermittent and the vehicle has some age on it the problem is most likely to be caused by poor grounding. Make sure the alternator and battery have good clean connections to the engine block and the vehicle frame and that the engine block is well grounded to the frame. Vehicle grounds are poor at best when the vehicle is new. After several years of corrosion the grounds are almost nonexistant.

Interesting that the FCC relied entirely on the statments of
one "concerned citizen" Wayne Overbeck for their Amateur
rules. If that isn't actvist politics I don't know what is.

Vanity Calls and Respect?

I've been a ham since 1958, have held several calls, KN9UJJ, K9UJJ, lapsed, N9CWW, and currently KW9N. I've a dilemma with the vanity call program. I have much respect for hams who've been there first, both with themselves and their calls. I knew a lot of them years ago. I very much would like to have been originally issued a 1x2 call.

Calls are identities and to many as integral as our own names. I feel that way about my own call, KW9N, which I was issued 14 years ago. However, A 1x2 call would be great. I feel at the same time those calls are unique and should not be reassigned in much the same way you can not reassign an identity.

So... A number of 1x2 calls still are unassigned. There's a K9WN on the list.

The dilemma is would I be offending the original holder or friends of the original holder by asking for and perhaps receiving the call in exchange for KW9N? I ask the question here because this seems as much a ham community issue as it is a personal one.

Thanks for any thoughts...

Mike Bailey, KW9N

815. ForSale: 37' Telescoping Mast, $60 or best offer

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-11 00:00:00 UTC
From: gvs@netprose.com

Source record: 207407
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Telescoping Mast for sale
in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The
sections are held in place by a u-clamp and thru center eye-bolt
arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru
center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very
beefy) which I reamed out to allow upper sections to slide thru
freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

73,
-gary

freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

817. Wire size for big DC current

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-11 00:00:00 UTC
From: adkinsg@piranha.ianet.net
Message-ID: <5b7i2v$irp@piranha.ianet.net>
Source record: 207409
Cross-posted to: sci.electronics,rec.radio.amateur.misc,rec.radio.cb

Hi.

I need to run a DC cable that will handle about 50A at 12
continuous (an hour or more).

It's to power a big power inverter to run some electronic
equipment. Currently I use Alligator clips to hook it
directly to the car battery. I'm needing a little more
permanent solution in my car (92 Ford Explorer), so I thought
I'd run a big cable from the battery (or starter relay)
through the firewall, and inside the molding to a compartment on
the back of the truck.

I'm concerned, however, about the length of the cable (I estimate
about 20 or so feet because I want to hide it in the molding).

Will a 4AWG copper wire (I'm specifically looking at a spool of
battery cable in a JC Whitney catalog) be sufficient for that
load and that distance?

Obviously I don't want to catch my car on fire from an overheated
cable...

I used to have a book that gave this type of data, but I seem to
have lost it. Any suggestions welcome.

Thanks!

Garry

p.s. I crossposted to rec.radio.amateur.misc and rec.radio.cb hoping
some people there might have experience running big cables for their
transmitter amps.

818. This Week in Amateur Radio #198 (for air through 1/17/97)

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-11 00:00:00 UTC

-
Here is a summary of news items covered on edition #198 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 17-Jan:
-
1. Ham to be Aboard First Shuttle Flight of the Year
2. ARRL Appoints New Section Managers in San Joachin and Idaho
3. Section Manager Recall Effort in Vermont Soundly Defeated
4. FCC Still Busy with Gate 2 Vanity Apps, Hams Await Gate 3
5. Commissioner James Quello Leaving FCC after 23 Years of Service
6. Stan Wood, WA4NFY, Takes New Job, Leaves Phase III-D Project
7. Heard Island DXpedition On the Way, to Establish HF Beacon
8. Hams Provide Communications in Northwest Flood Relief Effort
9. Special Event Station Calendar
10. "This Week" Seeking Special Feature Producers/Commentators
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. Weekly Propagation Forecast
13. MIREX Contacts Successful, Gets Good Ink for Amateur Radio
14. Texas Ham Works KC5TZQ Aboard Mir While Mobile on 50 Watts
15. Mir Voice and Packet Frequencies Flip-Flop Up/Downlinks
16. ARRL Reports Membership at All-time High
17. "The RAIN Dial-up" from Chicago
18. Former ARRL President, ex-Commercial Pilot, SK in Colorado
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
```

VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

819. XE# Licenses; SW Bcst stations

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-11 00:00:00 UTC
From: jherman@sierra.NET
Message-ID: <Pine.SUN.3.91.970111001947.25550E-100000@diamond.sierra.net>
Source record: 207411

1. Bill Sohl pointed out that if what Carl says is true (Mexico grants full HF privileges for any class of US license), then Mexico, like Japan, has waived the ITU code requirement (at least as far as granting reciprocal privileges). Does anyone know what license requirements a prospective Mexican ham must pass in order to get a ticket?

2. While tuning outside the HF ham bands I've discovered that a large number of SW broadcast stations are transmitting in the 8400-9000 kHz and 14400-14700 kHz regions. These are outside the usual ITU bands for a country's "external" broadcasts. What gives? (There have always been countries that have ignored the ITU [China and Russia come to mind], but the nations I'm hearing in the above segments include some of the more respected broadcasters...)

Note that the 8400-9000 kHz segment includes a maritime CW band; if shipping has given up CW why do I still hear CW traffic being passed on top of and in between the shortwave broadcasters?

Check out the local "car stereo installers" around town, I've seen as big as 1awg. stranded - for a car stereo amp, they really draw the power. They might be able to give ya ideas. Might be even cheaper to buy the wire from them, than to order it.

I think its an attempt at humor - and I thought it was pretty funny!
He means that if everyone gets a new old call he'll be the only one
with a different format call.......

Anyways I happen to agree with you. I just couldn't pass up the
opportunity to get a great old-time callsign. The last time was in
1976 - twenty years ago. I was very lucky - got my second choice.

When I was getting interested in radio back in the 1960s we looked up to
the older guys with the two letter calls as a source of knowledge and
experience. Now, thirty years later I am proud to carry on this great
call and be a source of knowledge and experience to newcomers to the radio
hobbies. It also means we are becoming "Old Buzzards"

I only hope I am worthy!

The best advice I can give you is to get on the air and have many qsos
with other hams operating cw. Also copy W1AW regularly. Operate and
practise. Wear headphones. If you know how to type try copying with a
"mill" (typewriter). Learn to send on a straight key.

Regular practice. preferably daily, is the key to mastering cw.

Good luck!

I got stuck in the "WIPS" area for 3 or 4 weeks when I applied on Sept.23. Never did find out what the problem was with my application, but got my 1st. choice. If I were you, I would
apply with my old ADR and change it after I got my new call.

>Brad Herrold
>KB9OTI

Harold:

W1AW sends 5, 7-1/2 and 10 at higher speeds (15WPM) and leaves longer spaces between the characters. When they reach 13 WPM they go to the normal formula for spacing and it seems a: slower and b: somehat harder to copy. I suggest that when you get to copy 10 WPM comfortably advance directly to the 15 WPM practice. Once you start to get most of the 15 WPM text start copying the CW bulletins at 18 WPM. Master the 18 WPM and you'll get your Extra code test no sweat!

Good luck!

828. === Delaware QSO Party Feb 1/2! ===

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-11 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5b8352$eg@copland.udel.edu>
Source record: 207420

Finally - the Delaware QSO Party!!

Sponsored by the First State Amateur Radio Club

Who - All radio amateurs in and out of Delaware

When - First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Sat.)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sun.)

Where - Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice and Technician freqs: 25 kHz above sub-band edge

This does not imply that you may not work any bands you choose,
such as VHF/UHF/SHF. However, as there is only one entry class,
all logs will be judged equally.

How - Work stations once per band and mode.
Exchange signal report and QTH (county for Delaware stations;
state/province/DXCC country for others).

Scoring - There is ONE CLASS for all stations.
Count ONE POINT per PHONE QSO.
Count TWO POINTS per CW/RTTY/Digital QSO.
Multipliers/special event stations: NONE.

Awards - Certificates will be awarded in the following categories:
Within Delaware: first, second and third highest score.
Within each Delaware county: highest score.
Others: first, second and third highest scores.
Further prizes and certificates may be awarded, depending
upon participation and merit.
Certificates and prizes courtesy of Ham Radio Outlet, Delaware.

Submissions-
There are no requirements for dupe sheets, and no forms nor
software offered especially for this contest.

Logs must show date, time, band, mode, station worked, exchange send and received, entrant's call and QTH, and total summary of QSOs and points. You are assumed to be observing the rules of amateur radio and contesting, so that no such written statment is required.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc.
P.O. Box 1050
Newark, DE 19715

Include SASE for results.

E-mail logs with adequate summaries, and any other comment or inquiry to:

radio@udel.edu

Results will be posted through 3830@contesting.com, and e-mailed to NCJ and CQ.

Thanks and LET'S GO DELAWARE!!

I had the same problem, and I was a first day filer. I simply filed
with the old address and the Post Office forwarded my new license to me
in Wisconsin. I was a bit worried they wouldn't forward it, but figured
if that happened I'd file a 610 later for a change of address and claim
I'd never received the license.

#4 AWG is safe at 50 amps. Temperature rise should not exceed 75 degrees Celsus for continous duty in an enclosed conduit bundled with other cables of similar ampacity. Voltage drop for a 50 amp draw across 20 feet of #4 will be 0.253 volt. That may not be acceptable for your application. It wouldn't hurt to use a larger wire. I'd suggest #0 or even #00. #0 would have less than 0.125 volt drop at 50 amps for a 20 foot run.

Note that connection losses have to be added to this. That could add another couple of tenths of a volt drop at each connection. That starts to become significant for nominally 12 volt equipment, which often becomes "squirrelly" if you operate only slightly below 12 volts. If you intend to operate with the engine off (I don't recomend that since you'd rapidly discharge the battery and car batteries don't tolerate deep discharge well), this becomes especially critical. Make sure you choose low resistance connectors and install them properly.

Of particular concern is the type of fuse and fuse block that you use at the battery (you *must* fuse this line at the battery). Ordinary fuses and fuse holders can represent

an unacceptable voltage drop at this current draw. That is
especially true after they have been exposed to the elements
for a while. High end audio shops specializing in high power
auto audio installations carry special gold flashed fuses and
holders which will resist corrosion in the auto environment.
Make sure the holder clamps the fuse *tightly*. I'd recomend
the fuse and holder styles which *bolt* the fuse in place
rather than those which depend on spring pressure.

>73 de IW2IQM antonio montagnani

In the Philadelphia, Pennsylvania area there are several "ham" stores.

"Ham" Buerger on Davisville Road in Willow Grove, is doing away with the ham equipment lines.

The Hamtronics division of Trevose Electronics, in Trevose, PA (Brownsville Road?) is still up and runing.

In New Castle Delaware, about a half mile S onr route 13 from the Delaware Memorial Bridge is the local Ham Radio Outlet (part of the chain).

Another Delaware store:
On US 202 about two miles north of the junction with I-95, around back, upstairs behind the sewing machine store that is next to the Talleyville Post office you will find Amateur and Advanced Communications.

If you don't have a car, you won't get to any of these places easily.

HRO is 30 minutes from Philadelphia if you are a fast driver. A&A is a shorter drive, but the last 2 miles can be slow.

For info on routes from where you are staying to these places, check the ham mags for street addresses, then go to www.vicinity.com and try the driving directions software. Beware that this software sends you on limited access highways and tells you to turn on streets that have no interchange with the limited access highway. Double check on a local street map before attempting to use the directions.

HI!

I am a relatively new ham and 16 years old. I have a cushcraft R-7 Vertical antenna that I can't seem to tune very well. All thge bands seem dead. My coax, is in good cond. and so is the antenna I beleive. I bought it new last summer.

Could in be a blown balun box? If so, how much of a diff would that make in the swr?

Any suggestions or help, would be much appreciated!

Tom...

Thats the unfortunate part of situations like this. We do "export"
everything and in ham radio, the art of repeater jamming is among our
"products." Its not one to be proud of.

Mike...

Yes, you are correect! I used to be prpoud to write about FM and repeaters inSoCal. Now I concentrate my Worldradio column in other areas that are still sane. This place no longer is. Maybe it never was.

You know if you expended the same energy towards learning the code
rather than trying to weasel out of it you might find out a couple of
things.

1. Its not that hard to master the Morse code. Most of us did it!

2. Its actually fun to use! Its radio at its most basic level.

3. It is actually quite conservative of radio spectrum.

4. It is an international language so you can communicate with folks
evn if you don't speak a word of their language. Work some DX!

Maybe you can understand it better if I put it like this. You want to
join a college fraternity and have to endure the pledge procedures. You
have to do things to prove that you are worthy of membership in that
fraternity you have chosen to join. You may not like or understand these
things but you do them anyways in order to become one of them.

Same thing here!

Len,

Thanks for you point of view.

I make it a point not to debate "cocktail party science". :)

By way of reference, I suggest that you begin with a study of the
experimental evidence of Hertz, Steinmetz, and the like, and top it off
with "Electrodynamics of Continuous Media" by Landau and Lifshitz. From

that vantage, you should be able to draw some conclusions about which I would be pleased to debate.

If you are of the "Dr. Ross Adey school of thought", completely forget it. Research based upon mind control experiments has been long discredited, unless you are in the UFO and "CIA implanted brain receicver conspiracy" set. I believe Dr. Adey is an amateur who is using this affiliation to advance some unique theories which are viewed as inconsistent with scientific method and proven electromagnetic energy effect evidence.

It is interesting that you advance the zero risk, "I don't know for certain", personal philosophy. It is just that, a personal philosophy. I personally don't know for certain that the sun will rise tomorrow, but I have good evidence that it will. This is not a clasically debatable issue. We agree to disagree.

>As I said before, please go and stand in front of a high power RF
> source and report your health as the minutes go by...

This is really good, but not good enough.

Guess what! I have sood in front of may high power RF sources, many of which are not available to 99.99% of the public. In the limits of the C95 standard exposure levels, I felt nothing in some cases, and a little warm in others. I could have ramped it up to 10xC95, the safety margin, but I am not stupid. I prefer to let my physician do that with 2.45 GHz microwave diathermy on a localized SAR level. Ever have a diathermy treatment? It is used all over the world by physicians, and heats deep muscle tissues for theraputic benefit. The last I looked, although I do not know for certain that physicians do not kill people with diathermy, I have good evidence that they don't.

>I'd
> ask you for a Rieke diagram on how the maggie and cavity can handle
> varying loads, but that would be a bit much, ey? :)

Len, quit moding. (Moding, get it, ey?)(pi) (E X H stuff?)

Stop tripping over your space charge, it is undignified, unless you are a certified low noise CFA.

As I said, we agree to disagree.

Regards,

Arthur Varanelli

841. ForSale: 37' Telescoping Mast, $60 or best offer

Telescoping Mast for sale
in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The
sections are held in place by a u-clamp and thru center eye-bolt
arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru
center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very
beefy) which I reamed out to allow upper sections to slide thru
freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

Yeah..the last day they did a big chunk of new apps was on Dec 18, and I think they worked their way thru November (except for the WIPS).

I suspect they will do another big chunk "any day now". A pal of mine missed on the first time around and sent another app in just before Christmas. So I'm watching the FTP files, too (which I couldn't access this am).

I lucked out: Got my first choice (of 3) on the first day.

>Why is the broadcast industry allowed to do it? They buy and sell calls
>all the time.

Broadcast licensees are subject to anti-trafficing regulations too.
In their case, they have to hold a given call for one year before they
can change. So they don't do it "all the time" either. However, the
broadcast situation is somewhat different from amateur radio. Their
call is part of their promotional package, and has a cash value to
their *business* (amateurs are forbidden to engage in business with
their stations).

Broadcaster licensees are allowed to select any available call sign
for their use upon issuance of license, and at intervals of no less
than one year thereafter. If the call sign that they desire is in
use, they can negotiate with the station using it and offer to pay
them to release it back into the pool of available call signs. That
doesn't *guarantee* that they can then get it, but if the filings
are handled in a timely manner (usually by communications attorneys
physically present at the FCC office), it is likely that the exchange
will come off without a hitch.

Now personally I don't see anything wrong with call sign trafficing,
or ticket scalping, or other resale activites governments seem to find
dubious. I see it as the free market at work. But apparently some people
have insisted that government step in and limit it for whatever reason.

Hi John,

I would suggest changing the call then modifying the license.

My first application was bounced as my ZIP+4 number was on
the application but not on the old license at the FCC. In other words,
it would be easy one way and require two bushel baskets of individual
attention the other.

Is there a mod to expand the memory on the PRO-26?
Any help would be greatly appreciated.

Your premise is based on the the idea that what exists today dictates
future trends, ask any IBM executive about what happens when a company
fails to recognise that this is not so. Certainly you are right, Michael,
in your belief that a good number of restricted license holders will hop on
an HF SSB rig at the first opportunity and start ragchewing, but remember
they will just be yapping to the people who passed their morse requirement
on a learn-to-forget basis, and good luck to everyone who enjoys any aspect
of our hobby. Then again, Michael, you will also get techical people down
into bands where test equipment is not so costly - perhaps these people
will put Amateur Radio back on the map with some homebrew cutting edge
developments. If that happens then every one wins.

There are a lot of opinions about this. Mine is that you should learn code at 5 wpm, but where the individual letters are sent faster (i.e. the letters are at 13 wpm but spaced apart such that the overall rate is only 5 wpm).

The easiest way to learn code is to get by the 5 wpm requirement, get Novice privileges, and then get on the air in the Novice bands on HF. There is something about QSOs as opposed to code tapes that makes you learn CW much faster. Most guys can go from 5 to 13 wpm in a few weeks if you do, say, one cw QSO per evening. Plus, it is a lot more fun that way.

The key is not WPM, but simply to learn the character set and then USE IT. Practice, practice, and more practice is what will build your speed. But don't burn out. Limit your sessions to a half hour or less each day, but keep at it. Most people seem to have a plateau at around 10 wpm, but don't sweat it. Your license won't expire for years!

Many people recommend getting a tape that uses the Farnsworth method. That means that the characters are formed as if the code was being sent at a higher speed, but spaced out so that the information rate is at a lower speed.

I think actual on-air practice is just as important as listening to tapes, so get that 5 wpm test and then use it. Sweating over your first CW contacts is an experience that really shouldn't be missed! (in my humble opinion) Have fun...good luck.

Yes. You need to change your address first. It takes about 3 weeks
tops.
Then you can apply for a Vanity call. (You should have changed it when
you moved)

If the SWR is good it is tuned. If it is not you probably have an open
or shorted feed line. The Balun is very rugged, unless you took a
lightning hit or some such) and should be ok. The R7 is VERY sensitive
to being too close to obstructions. You MUST believe the instructions
and install 8 feet above roof or ground and AT LEAST 25 feet from
towers, trees, etc. I had one and it was very good on almost all bands
except for some bad traps I got. It could be a bad trap, if you have
trouble call Cushcraft and they will help you. You should be able to
get it to work to specs. That means the bandwidth promised. If you try
to tune it to lengths other than the set up be VERY careful that yo do
it in the correct order as in the instructions, that is CRITICAL.

Hi Mike and all,

I got a vanity call, and although I didn't know the ham who first held it, I will work on the assumption that he was a good ham (not all were, even in the "old days")... and I will try to do honor to the callsign by trying to be the best ham I can be... by being helpful and courteous to others.

I've already done some research on the call because of my interest in the history of it. It first showed up in the 1934 callbook, belonged to a man in Boynton Beach, FL named Paul McGinty, and he was finally listed as a SK in the 1988 callbook. I can't say how his friends or family might feel about it, but I hope that he would be pleased that someone else wants to carry on with that callsign... even if it is for "vane" reasons. I am grateful to one of the hams on the NG's here, Wes

Kranitz, and to the QCWA, who have helped me with gathering this information. I would also be very pleased to contact anyone who knew Paul to learn about his life and the pleasure he got from ham radio. And I would dearly love to get one of his old QSL cards! If anyone can help me further in finding about about him, I would very much appreciate it.

I feel that this is the best I can do to "respect" the previous holder of my callsign. Perhaps not everyone is so interested in the "history" of their calls, but this has been important to me.

As far as "identity"... I know who I am, regardless of the callsign I use. Some have joked or bad-mouthed the "dead-man calls"... but it matters not to me. I've only been licensed since '78... and I upgraded to Extra specifically for the purpose of requesting a 1x2 callsign. But that "extra effort" has paid off in other positive, beneficial ways as well. I have become very active with our local VE team. And I decided to quit my doldrum job (after saving enough money) to go to college and study electronics. I just graduated with honors with a 2-year Associate Degree in EET and I start working this Monday in a very good-paying job in a steel mill near my home. I also studied and passed the commercial GROL license this past summer. As I look back, I really think that all this has come about because of that "spark of interest" in obtaining a vanity callsign... about 4 years ago now.

I hope that Paul McGinty would appreciate and respect the future that I have in store for the use of his callsign (God willing)... as well as I appreciate and respect the past that has brought the callsign, and me, to this point in my life today. Although I'm not an "old ham" (Mike, you were licensed the year after I was born!)... I still believe strongly in traditions, with respect and reverence for those who have helped to lead us all to where we are today in this great hobby. (or "service"... but thats another discussion)

Best regards,

Stan Vandiver, W4SV (ex-KD9BE)

WD8LDY would make an excellent choice. I've known him since he was just
a little boy hamming back in WV.. I wasn't aware he is in Texas now but
I'm glad to know he is still active in ham radio.

856. Kilowatt Ten Tec Transceiver System For Sale

Newsgroup: rec.radio.amateur.misc

My friend KA9DQQ (Dick) has the below equipment for sale.
He resides in Wausau, Wisconsin USA

Ten Tec Model 705/705A Electret Condenser Microphone
Ten Tec Model 585 Paragon All-Band HF Transceiver
Ten Tec Model 253 2 Kilowatt Automatic Antenna Tuner
Ten Tec 9420 Power Supply
Hercules II Model 420 Solid State Linear Amplifier

All Ownerï¿½s Manuals Included.
System Completely Rack Mounted.

Price $3,600.00 Plus Shipping/Handling/Insurance.

I am posting this for him, please call him for any additional
information.

Pricing on above equipment should be confirmed with KA9DQQ.
Final price is subject to his approval.
I reserve the right that if a typographical error occurred, it was
not made to misrepresent KA9DQQ or misguide the reader of
this posting. Laymanï¿½s termsï¿½ I am not the best of typists.

KA9DQQï¿½s personal information is as follows:

Email: elmer5@juno.com
Phone: 715-848-8095

Thank you for your time and attention.
Dave KB9OPQ

Yep. I did that on the same route. Found a few repeaters but almost no
activity on them and got NO takers when I tried to make some contacts.
Maybe due to my out-of-town callsign?

George

Brad,

You might try a method that is called Farnsworth. In this method the characters are sent at the fast WPM speed but the spacing between the characters is increased to give a lower 'total' wpm. As you increase copying speed you just decrease the space between each character as the speed the character is sent at remains the same for all 'total' wpm speeds. With this method you could actually start off with character speeds of 20 to 25 WPM but with very long spaces.

I can recommend one very important suggestion for learning the code at any speed.....listen EVERY DAY! No matter for 10 minutes or 2 hours.

You might have to use a computer program to generate your practise copy with the farnsworth method as I do not know of any tapes using this method but I could be wrong.

Good luck.....Rick....W5RH

Doubtful. All we'll have is a bunch more people yacking. Digital HF modes
exist now, and hardly anyone uses them... Precisely because hardly
anyone uses them.

I had the same thoughts myself before applying for my vanity call. I looked at it this way. If I apply for a call which belonged to an outstanding operator of yesteryear then I have essentially given myself a personal goal of upholding this level of operating. The holder of the vanity call should operate with a high level integrity and that in itself will be a tribute the the former holder of the license.

The former, and most probably the original holder of my vanity call lived in Kingsville, Texas. I am still investigating further background information.

>
>Further Comment,

It sometimes shows up at light loads also. A scope is the best way to see it but you can also get a pretty good indication by using a DVM or multimeter on the AC scale and looking at the ripple. Under normal conditions ripple should be in the mv ranges but with a diode (or 2) out the ripple will some times approach the 1 volt level. In this measurement method it is best to compare light load to a full load AC ripple measurement. A drastic change will be a god indication of a problem.

For some it is easy, for many hard, for some impossible ... it's NOT
important enough
to justify maintaining the testing requirement.

>
> 2. Its actually fun to use! Its radio at its most basic level.

For you, perhaps ... for many of us it is the most distasteful thing in the
world. It is NOT
"the essence of radio communications" however, so forcing it on everyone is
inappropriate.

>
> 3. It is actually quite conservative of radio spectrum.

It is a FAR less efficient means of communications than many other forms.
Any other assertion is just myth and distortion of fact.

>
> 4. It is an international language so you can communicate with folks
> evn if you don't speak a word of their language. Work some DX!

Ridiculous ... one can only communicate an absurdly small subset of ideas
using "Q signals" and virtually all of that relates primarily to the
mechanics of making a contact, not to passing any volume of meaningful
information.

>

870. Help:AEA Log Windows Broke

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-12 00:00:00 UTC
From: Bob Wilson <n2dvq@cyburban.com>
Message-ID: <32D98E6A.67D0@cyburban.com>
Source record: 207263

I have been using my 386 running (4 meg ram) Windows 3.11 to run Log Windows for about a year with no problems. About 2 months ago The field boxes and the data that goes inside stopped appearing at boot-up. At first just restaring windows seemed to work but in a few weeks it progressivly got worse needing several retries before it would work. Now its at the point where it comes up with only the field names, no data or data boxes, no matter what I do.

I have tried uninstalling and reinstalling the program. I also reloaded windows. I just deleated windows and reloaded the same version I didnt try an uninstall , Do I need to???

I also checked the DLL file dates from the original against the ones on the hard drive and looked for duplicates. I could find none. The computer is used only for radio stuff so no new apps have been added for a long while

I dont know what else to try, and AEA is gone so ....

Tnx for any advice.

You advocate making theory tests more difficult, Carl. You would have ham radio open to only those who have technical backgrounds that can further the "service". Anyone in it just to have fun is just a "yacker" or "gamer" and would have no place in the "service". One hazing ritual would be out, another would take it's place.

>

I too now have a vanity call sign. I have recieved dome flack from some people over it. However thats usually before the explanation of why I got it.

Originally it was my grandfather's call dating back prior to 1932. He died many years ago and it's my tribute to him. After I explain that to people they don't seem to mind.

As to the "family attitude" question. I do think I'd have been a bit "miffed" were I a relative who sought the call of a close family member only to find that it had been claimed by someone hunting for a shorter call. (I traded a 1x3 for a 1x3, no advantage there!)

Nope, they DONT do that....they DO swap channels in metro areas where
cell are small and numerous but in rural areas or out in the Gulf, etc,
the user is likely to stay on the same cell unless they move out of
range.....If they make a new call, they likely will be assigned a new
channel....but still on the same cell with a max of 20 channels (but I
didnt tell you that! :)

> including MY Callsign. Is this Legal? (Using Simplex)

The ONLY legal way for any station to be operated "unmanned" on any band is that it be a rptr (operating under automatic control without an autopatch, etc) or packet station (operating under AX25 and NOT originating msgs but merely passing tfc).....What you are trying to do is operate REMOTE CONTROL....read the rules on that section (remote control of a station)....to remote control via RF, it MUST be on 222.15 or above. Yes you CAN OPERATE remotely on any freq BUT any control must be done seperately above 222.15...If this is not there, the station is not legal under Part 97. Your scenario above is legal IF you have the 222.15 or above OR landline control installed and functioning.
>
> Also, is there any regulation which says I cant do the same thing
> over a repeater? (Other than possibly the Repeater Regs)?

Again, remote control of a station comes into play.....Get a COPY of the FCC Rule Book by ARRL....it details this and explains it in plain english as well as the FCC rules...

884. C.A.R.L. Center for Amateur Radio Learning

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-12 00:00:00 UTC
From: Rick Horwitz <rick@rhphoto.com>
Message-ID: <32D9975E.6C63@rhphoto.com>
Source record: 207277

This has been a great month for C.A.R.L.
At their December meeting the West Valley ARC donated $1000.00, and from the estate of a silent key, a Yaesu FT-990. On January 7th the ARRL Foundation awarded the C.A.R.L. project a $5000.00 grant. Also in December, the QCWA Arizona Chapter donated $100.00 to the C.A.R.L. project and became a supporting club. As you know these funds will be used to equip the C.A.R.L. ham shack. These donations and support could not have come at a better time. The Arizona Science Center has told us to start running coax and installing equipment ASAP. We thank the West Valley ARC, ARRL Foundation and QCWA for their most generous and timely donations. We're really on a roll but we need to keep up the work as there is much that still needs to be accomplished.

There will be a general meeting Saturday, January 18, 1997 at 9:00am open
to all volunteers and anyone interested in learning more about the C.A.R.L.
Project. The meeting will be held at the board room of the Arizona Science
Center. Please contact Ralph Barr, W0DNO, ralphb@aztec.asu.edu for information.

Can you say SCAM???
After readin his web page, you can understand why I say that.....HOW would you like to have someone coordinate you and then NOT have ANY responsibility in their decision? (read the fine print!)

I will NOT believe anyone who tries to act as a one man coordination group who obviously is new to the field (with a NEW ham call who couldnt know the first thing of amateur radio coordination/propogation, etc) or anyone outside my local area who thinks the FCC will actually believe them... (one reason the TX VHF FM Soceity stands alone...besides, we do in one state what some groups take 16 or more to do!)

Sorry folks, but closed rptrs are a way of life in amateur radio...The FCC rules allow them...coordinating bodies coordinate them (and coordination bodies as per Part 97 are LOCAL or REGIONAL groups that have the MAJORITY of the system operators in that locale behind them)..I dont know of any that doesnt yet....and serious doubt any will try not to..

I operate semi closed rptrs....I dont drive people off but then I dont want the bubba types on it either....I DO welcome GOOD operators who can have fun but also KNOWS that the system is mine and my saying goes!
I also operate open rptrs....so dont try to slam me into one group or another....You can try but it wont work...

> Marc Grant, N0MG
> grant@sprintmail.com
> AF&AM

Fairly easy to convert.....a diode in the PTT line must be cut...this stops the rcvr from being muted....and a jumper across the RX LO OSC switch xstr so the RX LO has power all the time...and you now have a duplexed GE EXEC II...add a second coax connector (easy on the front next to the rcvr and tie it to the rcvr jack), pull the plug on the rx to the relay (I leave the relay in but its up to you..if you want to bypass the TR relay, you can...but its not easy), put a DB25 or similar on front panel below RX jack for Audio IO and COS/PTT and your done....TX audio can go to mic, PTT is easy, COS comes from TP901 on system audio squelch board, and RX audio can come from VOL SQ HIGH point...this is UNSQUELCHED and NON Deemphasized audio....you must gate the audio and de-emphsize it into the controller unless the controller does it for you (SCOM & LinkCom can....ACC doesnt, CAT not sure...you are on your own with others!)

Is there a way to use Logwindows 3.02 with a telnet node as its
cluster connection? I'm on the AC4ET node (207.98.193.11) right
now on a Win95 system using telnet.exe via a PPP DUN connection
on COM1. Slick, except that logwindows doesn't know that it's there...

Any of the license manuals would give you a couple of ideas. Don't
forget, you need a license to transmit. The ARRL Radio Amateur's Handbook
and the ARRL Antenna Book both have many antenna designs to choose from.

Have fun.

Take a chance to get the call. Just because you want it does not mean
you will get it. Offend? Hardly, if the family wanted the call, they
could have gotten it during gate 1.

Gary,

Where did you get your numbers on Pactor II and Clover? In the case of Pactor II there is only one manufacturer and PacComm who they licensed. At 1K for the TNC to do only pactor II that would have been 1,000,000 in business in the last 12 or 14 months. Do you really believe they have sold that many? If so I have a bridge ....

Bill

899. Re: HELP Club Problems

Newsgroup: rec.radio.amateur.misc

-> I would like to get some suggestions and ideas for attracting younger
-> to our club.
->
-> The average age of the members at present is in the 70's. WE can't ev
-> get volunteers for officers because of the dwindling membership probl
->
-> 1. The meetings are once a month on a Friday night. I believe this i
-> one of the biggest drawbacks to getting younger members. They are eit
-> out with there families (Pizza parlor, etc,) or out looking for socia
-> companionship.
->
-> 2. The 10 mile radius has about 40,000 population, 20 mile about
-> 110,000. There are no other ham clubs until you get to the big city
-> 30 miles away.
-> 3. The local High School has no ham club.
->
-> 4. I don't know if the local Community College (15 Miles) has a
club.
There are several things you NEED to do. FIRST know what other clubs
are out there.
When and where they meet.
#2 You have a big enough population to have at least 1 really good
club.
#3 Go to the local high school and community college and talk with
the electronics teachers, show them the 'cool' radios!
#4 Don't emphasize any particular thing, show the voice, code, tube,
solid state. etc. let them decide.
-> 7. What have other clubs done to get younger members? Remember,even
-> 30's and 40's are young to us.
->
-> 8. My personal thoughts are that the days of rag-chewing-hamming are
-> on the way out, as far as that being the main interest, as that is
-> replaced by internet. I think it has to be some reversion to the
-> technical side, including home brewing. What can a club do here?
->
-> 9. Morse Code can be made an attraction. The challange of distant
-> communications with minimum power. But, this is pushing. It is still
-> unfavored by most new hams. How can a club make it more
interesting?
#7 Classes are a great way to get new people, the group here has at
least 4-5 new members per year because of it. Advertise the class too!
About #8 The younger group does use internet, but the homebrewing
should still perk some interest. If the rag-chew they want to do it
with their peers, which means others already in it.

About #9 - Morse code has its place- and I have always had some interest, but what finally got me going was spotting a tornado and not being able to report it. That winter I decided to get my license. So you could emphasize disaster support! After 3 days of emergency services here - EVERYONE, had been able to help relay messages. Disasters are the 'in thing' now, and ham radio has always helped out, its the perfect lure of perking interest. If you do this, have storm spotter classes or some sort of emergency classes for training in your area. We had tornado and severe storm classes within a month of testing- it really helped keep me going. (I also am interested in aircraft, and other outdoor activities so the ham club ads got me interested).
We have a town of about 20,000 and a club with ages from well over 70, to teens, and a about 40 solid members strong, and possibly another 20 fringe members.
If you have any other questions feel free to drop a line.

901. Re: Alternator whine from hell, HELP

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-12 00:00:00 UTC
From: k5qq@aol.com
Message-ID: <19970112000900.TAA03409@ladder01.news.aol.com>
Source record: 207320

There have already been a few answers to this question which may be the correct one. However, in case none of those fix it, try this. Be sure your battery terminals are clean and the connectors scraped.

I had almost this exact problem with one of my radios and what happened is after a few years, the terminals started corroding and although it did not affect the starting capability, right after the car was started the heavy charge current from the alternator was able to make enough of a voltage drop across the poor connection the radio would start transmitting the 'alternator whine.'

So, give it a try. It was interesting that after I fixed it, it took almost a year for it to reoccur and again by cleaning the terminals and the battery connectors, the problem went away.

Good luck

Jim

No, a #8 would be foolhardy. The cap might smoothout the DC a bit,
but it will do nothing for the amps...

Here's another possibility. The alternator may have lost
one or more diodes. An alternator generates 3 phase AC, the
rectifies it w/ 6 main diodes.

If one fails, you get a bigger "notch" out of the resultant
waveform, and more whine. This will show up at full load.

Idle the car, turn on EVERY load [headlights, rear defrogger,
wipers, hi blower, etc.] and then look at the output line with a
scope.

> I am a relatively new ham and 16 years old. I have a cushcraft R-7
>Vertical antenna that I can't seem to tune very well. All thge bands

My R7 has been up 3 years now and has worked great. It survived a 100MPH windstorn last summer that took off many roofs in the area. I second the suggestions by W0MN. From what I've learned the 20 meter trap is sensitive to damage by high power so you might be careful about that. I don't own an amp because of my be kind to neighbors attitude so have never had to find this out. I learned that the R7 has a resonance just below the 80 meter band and a tuner will bring it up into the low end of the band for CW. I tried it and I do get out but at poor efficiency I'm sure. I don't think I'd try this at high power though. 73 CW OP

One other thing to suspect -- the battery itself. Especially if it is
still the original battery! Alternators have been known to make excessive
RFI noise when trying to recharge a battery that has a bad cell in it.

True, it is probably the alternator, but I'd sure check the battery out
first. Might be as simple a cure as putting water in the cell(s). :-)

Oh Mike, you know that isn't true. Both the pro-coders and anti-coders
have an equal capacity for newsgroup abuse.

What amuses me is when I set the followup-to: line, and people intentionally
disregard it. Again, code preference doesn't make a difference; newbies
and lids come in all flavors ;-).

If you have a line of sight path between the two handhelds, I would say about 10 000 km (+38 dBm Tx power, -152 dB path loss and about -114 dBm at the receiver). Low orbit satellites, Mir and the Space Shuttle can easily be heard on a handheld radio and the transmitter power at the satellite is only a few watts.

However, if you do not have a direct line of sight path between the stations, the maximum distance depends very much about the terrain and obstacles (buildings etc.) between the stations. The maximum distance can be only a few kilometers in some environments.

So, the maximum distance can be anything between 2 km and 10000 km. If you could give a better description about your environment, someone might be able to give a better estimate for your type of environment.

Brad,
Just sit down in front of your receiver alittle each day and listen
to the novice part of the hf band.What I tell you will work.Listen to
different code speeds on your receiver over and over and over again.
This takes alittle time and you will get mad some but thats natural.
Just get up from it and go clear your mind for a few mins. and then go
listen again.You don't need to buy any code tapes just listen to all the
different cw qso on the air.W1AW IS VERY GOOD PRACTICE but you need to
listen to different qso or(contacts).It will work Brad,it just takes
a little time.Good luck and you will make it.
Take care and 73s
Mike WO4J

>Thanks..
>Brad Herrold
>KB9OTI

Brad, if you learn the code with the letters sent at a very slow speed (5 wpm) it may be harder for you to increase the speed at which you can copy later. To overcome this problem, someone, a Mr. Farnsworth, invented the Farnsworth method, by which the letters/numbers are sent at a faster speed (13-15 wpm) and then the spacing between letters is the determining factor in the word count.

Many people feel this is the best way to learn code, as a letter sent a character speed of 13 wpm will sound the same if it is sent at a word count of 5 wpm or 13 wpm. Logically, I think this method makes sense - when you first start learning Morse code, it allows you more 'thinking time' between letters, and less thinking time is all that is required to learn Morse code at faster speeds.

Learning Morse code is an AUDIO experience, not a visual one, so any charts you have showing you a list of . . . and _ _ _ should be placed in the nearest trash can. Morse characters consist of DITS and DAHS, not dots and dashes, so if you want to make yourself a written list of what equals which, do it like:

A = dit dah
B = dah dit dit di

etc.

Good luck on your attempts to upgrade.

73, Jim KH2D

Pat,
If W4YXT was just issued on Friday, Jan. 10, 1997, why does it hava an
expiration date of 02 Jul 2006?

Callsign: W4YXT
Name: WILLIAM P SPREHER SR
Addr1: 12 DEITRICH RD
Addr2: HIGHLAND HEIGHTS KY 410761014
Country: USA
Class: General
Effective: 10 Jan 1997 (AV)
Expires: 02 Jul 2006

The license was originally issued on 02 Jul 1996, hence the 02 Jul
2006 expiration date. William had some administrative work done which
is why it appeared on the FCC's recent list that you are copying the
data you list below. The modified license was effective 10 Jan 1997 as
show above. This is NOT a NEW vanity callsign issued on 10 Jan 1997.

I've talked to some people who have had extensive problems trying to tune on the 40m portion. Seems that the engineer who laid out the specs was a (gasp) CW op and the instructions show assembly lengths for optimial CW band portions. There is one section of tubing that has to be lengthened (i believe). If you call cushcraft, the can be very helpful

I had the same thought when looking at callsigns to select. I did take into consideration the original holders and in many case my selections were old time hams who were personal friends. I think the first 15 or so were friends who I could tell others of the previous holder.

I received my 2nd choice W2CE.

W2CE was George Beck who owned Beck's Boat Basin at the end of the Woodclift Canal in Freeport, NY. His shack in the attack of a small house right on the water was filled with his spark gear even when he left NY in the late 70's. Also in the shack was his TCA color TV prototype s/n 5 still in working condition when I last saw it. He was active on 20M SSB with his friend K4GZ in Florida when I lost contact shortly after his moving to Florida and using his 2nd callsign W4CE.

Remember the days when you could hols 2 callsigns ? Well CE and buddy GZ were old enough to hold both 2 and 4 area calls with the same suffix.

Try at good boat supply house that carries various sizes of ''boat wire",
which is a fine standed wire.(very similar to welding cable) I have seen
it in sizes from #14 to #2/0.

Source record: 207348

All,

I'm a science teacher working on an electronics curriculum for a 6th grade class. One of the things I want to get across to my class are radio basics and one of the things I want to do to help them learn is put together their own crystal AM radios. One of the things I remember from my youth (I'm 40) in school and Boy Scouts was a plan for a simple crystal radio that was built by GI's in the European Theater during WWII. The plan came from a friend's father who was also a Navy electronics tech during the war. If I remember correctly, the radio consisted of a piece of wood (breadboard), a pencil with coil wire wrapped around it (tuner?), and an earpiece. The diode was constructed of a razor blade, a safety pin and a piece of "pencil lead". My friend's father insisted that the design should work. We could never get our radios to work because, I now think, we were too ignorant to realize that the "pencil lead" we were using (in the late '60's) was really graphite.

Anyway, do any of you old-timers out there ever recall building anything like this and, if so, do you still have the plans? I think putting something like this together from scratch would be a wonderful teaching tool for kids today who have absolutely no idea how or why a radio works.

Thanks in advance!

Brian

>anyone uses them.

According to the ARRL survey, 22% of amateur HF operation is digital.
A few years ago, most of that was RTTY. Today the bulk of it is PACTOR.
It is true that the newer modes have a chicken and egg problem, but there
are now over 1,000 amateurs active on PACTOR II, and perhaps 6 times that
many on Clover. To put that in perspective, there were about 3,000 people
active in the ARRL DXCC program in 1995, IE updated their country count
or applied for first time status. Amazed? I was.

Well, we know you can work simplex at least 200 km with a rig like
that. Folks have done it while contacting the MIR space station.
90 km contacts are also routine from what we laughingly call mountaintops
around here. But standing on the ground in typical urban clutter or
rolling suburban terrain, you should count on maybe 1 or 2 km range
HT to HT. In other words, if you have a near line of sight path, range
can be very long, if you don't, range will be very short. Power doesn't
matter much on VHF+ until you get into the big numbers where forward
scatter starts to be a factor. The 3 key factors for VHF+ communications
are location, location, and location.

On 2 meters.....how far can you see? I have have not used 6 meters but it is my understanding it is a little better at bending around corners than 2 meters. 2 meters will also reflect.

Take a look at his web page and you'll see why. While you may not agree with Burt's method of getting his point across, he makes sense. And why shouldn't he be bored? Most QSOs consist of a standard "boilerplate" form of information exchange. (rig, antenna, weather, age, QTH, etc.) Why even bother if that's all you're going to do? Why not talk about something exciting, like a controversial political subject, other than the pros or cons of CW? Why not use ham radio to learn a foreign language and speak to another ham in something other than English?

In all honesty I can see where Burt is coming from, albeit a bit sarcastic.

There is one other consideration, and that's amateur licensure. One has to be licensed by the nation whose flag the ship flies officially. Not a problem for U.S. or Canadian hams or someone with a reciprocal permit if the cruise ship is registered in the U.S. or Canada, but otherwise, it could be a royal pain. Before planning on shipboard operation, more is needed than just the equipment. I also haven't quite figured out a Canadian or U.S. ham would identify on a cruise ship registered in the other nation, I just realize that operation isn't banned, and allowed if the owner of the ship and Master of the ship both approve of the practice.

SB DX @ WW $OPDX.287
Ohio/Penn DX Bulletin No. 287

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 287
BID: $OPDX.287
January 13, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2YJL, K4PI, K4MZU, W5IJU & ISLAND/DX News, KN6DV, NL7TB, WC7N, K8JP, K9EL, G4BUE & DX News Sheet, LU1BR, ON4UN, VA3DX, VE6JO and ZP5KO for the following DX information.

THE EXCITEMENT/ANTICIPATION IS HERE! By the time you read this, the Heard Island DXpedition should have started or is about to start. The team is reportedly on the island, and some of the beacons are active. The NCDXF beacon will run from the island as VK0IR with an R5 vertical. It will transmit on 14.100, 18.110, 21.150, 24.930 and 28.200 MHz. The beacon transmits for ten seconds on each band every three minutes. The VK0IR transmission on twenty meters is at one minute and ten seconds after the hour and every three minutes after that. The transmissions on the other bands follow every ten seconds with the ten meter transmission starting at one minute and fifty seconds after the hour and every three minutes after that. On each frequency, it sends VK0IR in CW at 100W, then 1 second long steady tones at 100, 10, 1 and 0.1 W and then moves to the next higher frequency. The latest beacon information is available from WWW.NCDXF.ORG.
Lastly, I would like to make a pitch for the DXpedition team. PLEASE, PLEASE and PLEASE during the operation listen to the operators request and DO NOT, DO NOT, and DO NOT transmit on their transmit frequencies. The important thing is to "LISTEN AND THINK" before doing. A lot of money has been invested in this operation, and I do believe everyone will have a chance to work them. Good luck in the pile-up... 73 de Tedd KB8NW
ADDED NOTE: OPDX InterNet Subscribers will receive additional information on the operation.

8P, BARBADOS. Glenn, VA3DX, will be going to Barbados once again for this year's 160 Meters CQWW CW Contest. He will arrive there on January 19th, and will be active for 2 weeks as 8P9DX (he has held this call since 1987). He will be active on all bands, but will concentrate

on the lower bands, mainly on CW and especially on 160 meters. He plans to make this a serious effort in the contest trying to beat last year's score. He is hoping that someone in Idaho will call him in this year's contest. QSL via VE3ICR, Glenn Wyant, 74 Highland Ave., St.Catharines, Ontario, L2R-4J1, Canada.

ANTARCTICA ACTIVITY. Several stations have been reported active. Bob, K4MZU, suggests to keep on the lookout for the following:
KC4/KL7RL - Operator Art from Patriot Hills will be looking for Europe on Wednesdays 2000 and 2100z 14260 kHz. Also, Sundays at 1700/1800z and 2000/2100z on 14260 kHz.
VK0MAP - Operator Mike from the South Pole Station is active 2200-0300z on 14243 or 14270 kHz. Mike's old call last year was VP8MAP. He is the only VK0 ever licensed for South Pole. He goes QRT at the end of January.
LU1ZS - Operator Pedro from the Camara Base is active 2300-0100z usually between 14190-240. (En El Espanol)
LU8EYK/z - Operator Jorge, LU4EDL, from the Beyes Base Camp on Livingston Island can be found daily on 14331 kHz at 0100z passing family traffic.
CE9MFK - Operator Oswaldo from Sherriff Base is active on 14245 kHz at 0030z. (En El Espanol)
KC4AAC - Location is Palmer Station. Greg, WB7CHV, will be active soon.
CE9SAC - Operator Juan from Teniente Carvajal Base is active on 14195 kHz from 2200-0100z.
KC4/KC8CWI- South Pole Station is active on Sat/Sun 20 meters.

JX, JAN MAYEN. Be watching on 80 meters SSB for Per, LA7DFA, who is currently active as JX7DFA until April. He plans to concentrate on this band during January. He will be changing his location in February to the western side of the island. From his new location he will be able to run high power and with better antennas. He will also concentrate on 80 and 160 meters. QSL via his home callsign or via the bureau.

NEW DXCC COUNTRY??? Joe, K2YJL, reports reading in a recent issue of Carribbean Magazine, "that the residents of Nevis will vote later this year to secede from the union with St. Kitts. If this happens, they will become the smallest island nation in the Carribbean."

P4, ARUBA. Mike, K4PI will be active as P49I from January 22-28th. He will be active in the CQWW 160M CW Contest. Mike states he will also be active before and after the contest on CW on the lower bands and the WARC bands. QSL via K4PI.
Also, look for Andy, K2LE, to be active at the end of month or the beginning of February as P4/K2LE. QSL to CBA.

PJ, ST. EUSTATIUS. Mike, K3UOC, will be active as PJ5AA from January 24-28th. Activity will be on all bands plus participation in the CQWW 160 Meter Contest. QSL to W1AF.

SSTV ACTIVITY. The "DX News Sheet" reports two stations from Israel, 4X4FD and 4Z4UT have been active on the 20 meters SSTV frequency.

USI ALERT (OR-new). John, NL7TB, will attempt to activate the first Oregon saltwater island for USI (United States Island award program), Haystack Rock at Cannon Beach, on January 30th around 1930Z (+ - low tide) on 14260 kHz. Haystack Rock is at 235 ft. high and is the 3rd largest coastal monolith in the world. KC7KHU will be used with 10-80 meters capability. This "rock" does not qualify for IOTA, but the other Haystack at Pacific City does. Operating time and equipment will be limited due to tidal conditions and the distance the gear will have to be carried. A wheelchair battery will power his FT-840. The antenna will be an Outbacker mounted to a camera tripod! Large stepping stones lead from the beach to the rock. John had a real "hairy" experience here some 20 years ago, so this revisit has been a long time coming. For a preview of the rocks on the World-Wide WEB, try the URL address of: http://www.el.com/To/CannonBeach/ QSL via John's WA address or via InterNet E-mail: nl7tb@owt.com

VP5, TURKS & CAICOS ISLANDS. Joe, K8JP, will once again be active from Hamlet as VP5/K8JP, February 12-24th. Activity will also include entries in the ARRL DX CW Contest and the CQWW 160M SSB Contest. During the contests, he will be signing VP5JP. QSL via K8JP, P.O. Box 59573, Schaumburg, IL 60159-0573.

XF, REVILLAGIGEDO. Hector, XE1BEF, is now active as XF4CA and will be there until January 20th. His activity will be on all bands (160-10 meters) on CW/SSB and RTTY. QSL to home call.

XU, KAMPUCHEA (Cambodia). Mike, XU6WV, finds time is a real premium and has found there is not much time for operating. Most of his operation has been on 20 SSB around 2330-0015z or 1200-1300z. There has been some activity on the WARC bands. He will be putting up a 40/80 meters vertical soon. He states that he has RTTY equipment, but this is not a high priority due to his antenna situation. He is trying to arrange some free time so he can be active from Kompong Som (on the ocean) around the CQWW 160 Meters Contest.

ZK, SOUTH COOK ISLAND (HELP WANTED). Vitaly, VE6JO, will be on vacation in Raratonga from February 22nd to March 10th. He will staying at the Puaikura Reef Hotel. Vitaly has applied for a licence, but due to a lot of travelling in Australia prior to his vacation in ZK1, he will not be able to take any equipment with him. He would like to find a station that he can use/rent for this period of time. He would like to operate CW, SSB and RTTY. Any ideas/suggestions will be very much appreciated and can be direct to Vitaly's InterNet address: markv@snc-lavalin.com

ZP0, YACYRETA ISLAND (PARAGUAY). A report from Paraguay states that a group will be operating from this island located in the Parana River from January 19-26th. They will be using the callsign ZP0V, and operations will be on SSB and CW and on 80, 40, 20, 15, and 10 meters.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

I guess I need to restate that what I was looking for was a chart that shows the frequencies, usage, & license classes. I know the frequencies as they are listed in the Radio Amateur's Handbook, etc., just liked the graphical chart, but at eht time it was published 17 meters was not a ham band.

948. WILSON 1402SM H.T.

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-13 00:00:00 UTC
From: "George J. Nixon, Jr." <n9ejs@mcs.net>
Message-ID: <32DAAC94.1B88@mcs.net>
Source record: 207218

I have a Wilson 1402SM h.t. that appears to have a defective
internal mic, and I could use some help on the following questions:

1. Is the manufacturer still in business? The name plate is
damaged on the back and illegible.

2. What kind of internal mic does it have? It is a little
square about one-third the size of a postage stamp.

3. Is there some cross-reference source that would list what
could be used as a direct replacement for the internal mic?

Thanks,

George, n9ejs@mcs.net

949. ?? Yaesu FT-8000R CAP/MARS Transmit Modification

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-13 00:00:00 UTC
From: tkoliver@telis.org
Message-ID: <tkoliver-1301971025180001@205.187.131.20>
Source record: 207219

I have heard of two modifications to the FT-8000R that will supposedly allow extended xmit. One mod had something to do with removing a resistor on the control circuit board. The other said something about entering a freq. of 1234.560 on the right display, power off, then back on again.

I have tried the 1234.56 mod, and nothing changed. I am hesitant to try the resistor removal, since the parts are not designated on the board with their "R" numbers.

Question: What is the REAL Yaesu CAP/MARS mod for the FT-8000R?

Thanks in advance,
Tom Oliverius

At this time, you should not feel like you'll step on anyone's toes.
That is what gate 1 was for.

It is also possible that K9WN has never been issued.

The little research I've done on my call hasn't shown any past
assignment. If I'm wrong, I'd love to find out the history on my call.

Mike, As you can see above Carl is kinda transparent, he just doesn't
WANT to do it..

He wants to be given something for nothing. eg the 90's welfare
mentality. He doesn't *want* to work for it. He'd rather whine.
Fortunately there aren't too many like him, they're just noisy.
Most of the 'no coders' *are* working on upgrading.

Not Carl tho', whether laziness, dyslexia, or not taking his medicine,
he absolutely refuses to make the effort.

It really is a pity.

Need some help here. I am an Englishman and have the job of helping to sort out the estate of a friend of mine who has recently died. He lived CA/NV border.
He had and I quote his wife " a room full of ham radio gear". Knowing him, it could be junk or, more probably, state of the art.
Although I have no problems with the rest of his stuff -- I'm an antique dealer -- I have no clues as to value or how to sell of the radio equipment.
Any of you guys want to get involved here. I'm not wishing to rip the last cent out of someone for the gear, just to get a fair price for his widow.

Please e-mail me at graham@ismacs.u-net-com or graham@ismacs.net.

I will be in the States sorting this out for five days from Jan 22.

TIA

GF

Alot of bs on this one, foresure.

Acording to the Ontario Hydro electrical safety code book. You need #6
this will do @ 50 amps for a 23.4 feet. #8 is only good for 14.7 feet
but because all wire is at least 15% over rated you could probably get
by with it for a non continuous load. But why take the chance? Use #6
and sleep well. Any bigger wire is overkill and a waste of money.

Thanks to all of those who replied. The problem it seems was in my headphone
/ boom mic. Something in the circuit was picking up the alternator noise and
amplifying it. witching to the habd mic has fixed the problem and now I can
concentrate on fixing the other mic.
Again thanks for all of the suggestions.

Gary,
4 guage will handle 50 amps but you'll still see a voltage drop at 20
feet(a half a volt or so).

Just advice:
Pulling 50 amps from a stock explorer or any other car is risky.
Even though you may have an alternator rated at 100 amps, it will not
hold with a 50 amp load plus the rest of the cars loads. It may

initially but once it gets hot (AND IT WILL) you can expect 50A or so from it. This is very very hard on the alternator.

Consider a dedicated high output alternator with another battery(deep cycle).

later , Brett

Is your identity for sale?

Seriously. Your callsign is a group of letters and numbers issued to you
by the FCC. They could have all of us append a "ZZX" after our current
calls (i.e. KE3MLZZX).

So what?

If your callsign were so bloody important, why would anyone change it
after their first?

If it walks like a duck, quacks like a duck, then maybe it is a duck. I became a ham radio operator years ago only to find that the CB is now my two meter radio. I also agree with Bill Pasternack, can we continue to hold on to our bands with this kind of stewardship being displayed?

Law, whose law would that be? You pro code twits choose to slander an entire country because of a rumor that some undeserving no code slime might be able to operate on the sacred HF bands with a Mexican license that in your egotistical opinion he might not deserve. You might call the Mexican Counsulate and inquire as to what the regulations actually are before shooting off your big mouth. My understanding is that they will not issue a reciprocal to less than a General but I have not checked.

Tu sabes nada pendejo

> them.

Your problem is not legal, or technical. It's a combination of the culture of the repeater, and your assertiveness.

There are ragchew machines, and there are call-and-QSY machines. Is there a problem telling them bluntly that they're not using the machine in the way the organizers envisioned? It's not a legal issue, and you're not accusing them of rudeness. You can even take responsibility yourself for not "communicating" the policy.

You might also consider a weekly "repeater net," ostensibly to explain control and autopatch functions to new users. And a newsletter might also help.

>public-service image. That commercial radio users engage in this
>practice is certainly not a valid excuse either.

Why not, non profit organizations pay enormous sums to acquire property
and logos and trade names. If non profit companies can do it why not
us?

P>Roland said he didn't see any problem with that. His repeated
>statements about it "being all about money" and "making more profit for
>Yaesu and Kenwood" makes me wonder if he is just trying to yank our
>chain with a cynical, trolling argument.

No, it is an honest, sincere statement. I work for a non profit
organization and am shocked at the way money is spent and wasted on
logos, trademarks and slogans. They hire million dollar consultants to
think up this stuff and don't bat an eyelash at paying the fees
associated with it. Again, if non profits can do it why can't we?

>Roland also doesn't seem to
>understand that we have budget deficits because we are bleeding
>ourselves dry with welfare to the middle-class (entitlements) which we
>vote ourselves year after year, not that we don't have enough tax
>revenue.

This has nothing to do with paying for callsigns but I'll address it.
Lookie here mister, it's the middle class that pays the vast
majority of the taxes in this country. We're intitled to benefit from
entitlements that we've paid for.

>Furthermore, more money into the general Treasury hopper would
>just be more temptation to dole it out in bigger helpings (and I freely
>admit my complicity in this self-destruction, having taken financial aid
>for college and availed myself of many other government-subsidized
>services in the past). There is no obligation to spend tax revenue
>streams on the groups that provide that revenue.

This has nothing to do with ham radio. I got TAP and BEOG to pay for college since my father was retired and on a fixed income. What's wrong with that? Welfare people get everything for free: food, housing and medical without even having the intention to work. My father worked hard all his life and PAID plenty taxes until he was 67 years old.

>We are also selling
>off precious, publicly-owned, resources (public land and radio frequency
>spectrum) that will raise but a pittance in the overall budget picture,
>but will represent a far greater, and permanent, loss to our national
>heritage. That is certainly a short-term gain/long-term loss situation
>and indicates that no, it is certainly *NOT* all about money, even in a
>free market society.

What does this have to do with paying for callsigns? Sounds more like a beef against congress pressuring the fcc to sell off spectrum.

Ken, and to all who had a few kind words,

I want to thank those who had encouragement and support for me.
Yesterday, I passed my 5wpm code test.

My pride wasn't all in this accomplishment tho...my wife passed her no
code tech also. I am very surprised and proud of her.

I'll be buying an antenna this week and hopefully this weekend I'll be
on 7.100-7.150. Ken, maybe we will have that QSO.

Thanks again all.

Funny that the reciprocal license to foreign hams is FREE but we have to
pay $55 to operate in Mexico. Time we start charging countries that
charge us.

How can our deficit ridden country afford to give reciprocal licenses
away for free when Mexico charges $55? Something's wrong here.

Hey guys. Let this guy promise anything he likes. He can't deliver. The ARRL and NFCC have signed the MoU creating the "Single Point of Contact" -- or SPOC. The papers were sined on 1/10/97. The next step will be to get the FCC on board. Once they are, these so-called "instant cooprdinators" will be meaningless. Actually they are meaningless right now -- they just have not gotten the message yet; ie: if you are not listed as a coordinator in the ARRL Repeater Directory you do not exist.

According to my little referance guide, 4AWG wird has a resistivity of
.235 Ohm/1000ft @77degF......worke out to about .1v loss per 10 ft
+- 77degF. for 50A. That's I^2*R=W or 50^2 * .00235 ohm ~ 5 watts
continuously (if the connections are tight) shouldn't even get truly
warm. but... if you *double* each run, you get half the resistance,
about
1AWG and even less heat..

NO NO NO and NO

Stan Stan, tsk tsk.. You should know better. Carl can copy 20 wpm in his head..he has stated so many MANY times. He chooses not to apply this to a license upgrade as a form of protest to the code requirements, kinda like the buddhist monks who immolated themselves against the Vietnam War but less so as Carl isn't that into protesting things. He has also atated that he ahs forgotten more about RF and electrical things than most people will ever EVER learn. He has also never applied that knowledge to upgrading (see above explanation).

I think you owe Carl an apology. After all he is a techplus for 20+ YEARS. He operated, possibly illegally, in Mexico. (we have to wait for Jerry to find out more) He lived on a sailboat where he hobnobbed with poor 3rd worlders. He built all his store bought equipment into a cabinet as opposed to building his own equipment and he works for a 2 billion dollar a year company making cordless 900 MHz phones and baby monitors, and he owns more test equipment that NASA. OH yes, he has a patent in his name..granted it's almost 15 years old and deals with outdated technology BUT CAN YOU STAN SAY THE SAME THINGS??? CAN YOU STAN, BE AS POMPUS AND OVERBEARING?? IT THINK NOT!!!

So crawl back under whatever you came out from and leave the man alone. Can't you see he's sensitive and caring, and only wnats the best for

everyone..as long as he's at the front of the line

Just my thoughts. Yours may differ.

Chris,

You forgot to mention beacons, beacons can be operated unmanned but
they must be operated in their allocated subband and they must ID
with a /B behind the call.

I would point out that the ARRL's Web site has a very nice tracker for FCC changes/updates (http://www.arrl.org/fcc/fccld.html) that gives a bit more information about why the transaction took place. Looking up W4YXT indicates that this was a combination upgrade and address change. The other callsigns on Pat's list do appear to be newly-issued callsigns this time (in the previous day's list almost all appeared to be address changes).

992. my 6mtr rptr squelch opens at night -WHY??

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-13 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5bcks6$62q@news.webspan.net>
Source record: 207301

Hello, my 6 mtr repeater squelch opens at night as though there was a rf noise floor rising, or signals getting into the input only at night. I thought the cold temperatures were effecting the squelch circuit because it has been around 15 degrees F, and when it was warmer in the fall there was no problem. So I tightened up the squelch a little. I still have the problem because the machine times out and I can't access my machine from 40 miles away like before! I have a mosfet preamp on the receive, which is not too radical. I would expect problems if I had a gasfet preamp on the receive. Also I have a four cavity duplexer in the system, which would act as a filter from out of band signals. I am using a GE MSTRII. I have to keep it in PL for now. If anyone can suggest some ideas, I would really appreciate it.

Presumably, you're trying to work repeaters. With typical amateur FM
VHF/UHF stations, the repeater is the part of the system doing most of
the "work." I have worked repeaters 60 miles away, while sitting in
airport gate areas, using nothing more than a stock rubber-duck.
Communication all depends on the ability of the repeater to hear you,
and that is largely dependent on the repeater's height and the height of
your own antenna.

If you can get a line-of-sight path between yourself and a distant
station, a rubber duck will get you there. Get your antenna up as high
as you can first -- only then worry about antenna gain.

(*****

The following is a QST

Storms rip through the Northwestern United States and leave thousands in need. Ham radio is there to help the victims of the tragedy. This story and more on an expanded Newsline report number 1013 coming your way right now.

(*****

NORTHWEST STORM

One of the worst storm seasons in years has devastated parts of the Pacific Northwest, Northern California, Northern Nevada and Idaho. Tens of thousands of people have been without electrical power or telephone service or only intermittent service. And the first week of the new year saw torrential rains causing the evacuation of thousands in low lying areas. Hundreds of hams, CB operators and GMRS users have teamed up to provide communications where there is none.

In California, an estimated 80,000 people were evacuated from four towns north of the state capital of Sacramento. They were forced to spend several nights in shelters or other temporary housing after the surging Feather River broke through a levee, flooding at least twenty square miles. During the height of the flooding on Friday January 3rd, it was not uncommon to hear hams on 40 meters describing scenes like this.

"One couple looked like they were standing waist deep out in a field, but they were right close to a power line. And it was difficult for the chopper to get to them and we couldn't understand why they wouldn't walk over to were the the chopper was. We discovered that they were standing on the roof of their car."

According to Tim Tribble, KD6MDV of the Sacramento City Fire Reserve RACES Operations Center, his group was activated at 12 PM on Friday, December 27th and have been on 24 hour operations ever since. RACES operators have provided supplemental communications for the Fire Department including relaying such information as the water levels at area dams. They have also been furnishing other support services including the delivery of food to out of state mutual aid groups.

Tribble says that their command post has been manned by up to forty area amateurs. There are also command posts at the Wilton Fire Department and at Station 59 in the Murietta / Sloughouse area. On Saturday the 4th, seven operators were dispatched to the city of Marysville to assist the Department of Fish and Game to assess needs in caring for animals. Another ten were sent North to aid the Red Cross in damage assessment. The flooding 50 miles north of Sacramento, was some of the most serious caused by a week of torrential rain.

To the East, another area hard hit was Reno, Nevada. There the Truckee River burst its banks pouring muddy water through the downtown area. Here's how one ham described the scene the morning after.

"Everything is closed, you can't get to parts of the city. They finally opened up the road that goes, what they call Lakeside Drive or something that goes to the eastside, we watch our lake down there and so. East Lake Carla says.

Anyway they are gradually getting things open. They got one lane going through Interstate 80. They say it takes about two hours to get to out of town, just to the stateline."

Close to 25,000 people in the Ashland, Oregon area depended exclusively on ham radio when telephones and power failed. All of Josephine County was cut off from the world for several days after the single fiber optic

telephone cable serving the area failed.

Jim Hendershot, WA6VQP runs Newslines Northwest Bureau. He lives in Grants Pass, Oregon which is located in Josephine County.

Jim says that every bit of communications during the emergency was by ham radio, including getting the emergency declared.

"One of the things that was real crucial was we had to get the commissioners, board of commissioners declaration of an emergency into the state so it could be delivered to the governor. Because, none of the requested aid that we were looking for things like sand bags, National Guard, any of the normal type aid to the state would give us. None of that could occur under the governor receives the declaration and authorizes emergency help.

Well, nobody could get to Salem. It was just a total nightmare. And finally the declaration was delivered as traffic over 80 meters to the state E.O.C. and delivered to the governor that way." Hendershot

The failure of the telephone system also meant that the growing concept of the public using the Internet to send its own Health and Welfare traffic will not work. Without long distance telephones the Internet really did not exist for the county and ham radio had to rescue the world wide web.

"The Internet was down. All the T1 digital connections throughout the county. Everything were gone because that fiber optic cable was trashed. And so, in order to provide a method for people to be able to send emergency messages or at least health and welfare out to their loved ones, he setup an emergency web page with a form on it to allow people to send short messages. Which was then picked up by hams in the area locally and sent out over packet into the national traffic system." Hendershot

To the North in Seattle, Washington, severe flooding caused the indefinite closure of two major bridges were due to damage from mudslides. Dozens of people were kept out of homes perched precariously on shifting earth. There, ham radio operators joined forces with other personal communicators and played a key role as well. More on ham radio relief efforts in future newscasts.

(Via Newsline)

(*****

TOWER FALLS AND TAKES REPEATER

A 2 meter repeater serving a large part of southern Wisconsin is off the air after the collapse of a 660 foot broadcast tower December 31st.

New Year's Eve is frequently celebrated with plenty of racket, but the noise near a southern Wisconsin ski resort the last evening of 1996 was anything but welcome. The sound was that of radio station WOLX's tower crashing to the ground after it became overloaded with ice. The tower was located near the Devil's Head Ski Resort, north of Madison. The collapse

also knocked the 146.88 MHZ Baraboo repeater off the air.

The system is operated by the Central Wisconsin Repeater Association. Its loss is a blow to radio amateurs active in emergency communications. Ray Meyer, N9PBY, says the repeater was used for the South Central Wisconsin Skywarn Net and as a hub for forwarding emergency information to the National Weather Service.

The system also provided reliable coverage for travelers across Southern Wisconsin, including a large part of the interstate corridor between Chicago and Minneapolis. The tower fell about 6:30 p.m. No one was hurt, but station employee Glenn Disney and his family who live on the property had quite a scare.

Disney says he and his wife heard several huge chunks of ice crashing to the ground. He rushed his family to the basement and heard what he calls "an earth-shattering sound."

The radio station plans to operate temporarily, using a 60 foot tower. There's no word yet, 'though, on when the Baraboo repeater will be able to return to service.

WOLX's station manager says it could be six months before a permanent replacement tower is installed. Meantime the repeater is looking for a new home.

(Via Newsline, N9PBY, K9ZZ)

(*****

REPEATER SITE COST TO HIGH

And foul weather isn't the only thing taking repeaters off the air these days. David Black also reports that a 2 meter repeater famous for serving a large part of central Alabama is about to lose its perch high atop a broadcast television tower.

The Montgomery Amateur Radio Club's 147.18 MHZ "tall tower" repeater is looking for a new home. The system is popular with radio amateurs in nearly a dozen counties and has been one of Alabama's best known repeaters because of its wide area coverage. The systems has operated free of charge from 1600 feet up on a tower owned by Montgomery television station WSFA.

But Club members were told recently that WSFA is negotiating to lease tower space to another TV station whose antenna would be close to the same level as the repeater. The new station will transmit 3.5 million watts through a gain antenna. And, a radio station whose antenna is also nearby plans to double its power to 200 thousand watts. With so much RF so close by, the only time Club members could do tower work on the repeater would be after midnight, while wearing expensive and cumbersome protective clothing. All of the tower's remaining space is taken by paying customers and federal agencies. So, Club trustees voted recently to remove the repeater from the tower and look for a new home. No word yet on where the 147.18 repeater may wind up.

MITNICK TO BE SENTENCED

Computer hacker Kevin David Mitnick, N6NHG, will learn part of his future on Tuesday, January 21st. That's when he is scheduled to appear in court for sentencing on one count of cellular telephone fraud and another dealing with violating probation on an earlier conviction.

No matter what sentence he receives its far from the end of his troubles. He still faces trial on twenty five new counts of alleged computer related crime that took place while he was being sought as a fugitive.

DIGITAL JOURNAL GOES RIP

Yet another failure in the ham radio business community to report. Word that the Digital Journal will cease publication with its January issue.

Formerly known as the RTTY Journal, the move to shut down the 45 year old publication came shortly after the magazine's publisher, the International Digital Radio Association, announced that the publication would move from monthly to bimonthly publication.

Reason for the failure? A combination of dwindling advertising revenues and a decline in the number of members of the magazines parent group that were willing to pay for hard copy of what they felt should be available free to them on the internet.

73's HOPE CURRIER - SK

Some sad news to report. Hope Currier, the fifteen year veteran Managing Editor at 73 Magazine died on Christmas eve at her home in New Hampshire. The news of Hope Currier's death comes from former Associate Editor David Cassaday, N1GPH who says that through her excellent work over so many years at 73, that Hope Currier who was not a ham had an influence on an entire generation of amateur radio operators.

BURNETT BACK TO 73

Meantime, 73 has told Newsline that it has hired Jack Burnett to perform unspecified editorial duties. Burnett had a long track record of success in the late 70's and early '80's in bringing 73 to its peak in popularity.

His return to the New Hampshire based publication could signal an entirely new direction for 73 Magazine.

UPDATE ON ARRL CLUB INSURANCE

Last week, Newsline reported on an ARRL release saying that the Albert H. Wohlers & Co of Park Ridge, Illinois, the company which administers the Leagues' ham radio and club liability insurance plan, had raised the minimum premium for the ARRL Club Liability Insurance to $325 per year.

Now the ARRL has put out a clarification. According to the League, while this does represent an increase for most clubs, it actually will be a decrease it for others. The League says that it all depends on the state in which the club is located. According to information supplied by Wohlers, the minimum premium will actually go down in six states.

AMSAT-VE SAYS YES TO ARISS

AMSAT-Canada has endorsed the concept of establishing Amateur Radio on the International Space Station. According to Jeff Milne, VE3EFT, the AMSAT-Canada endorsement comes after approval by the Radio Amateurs of Canada Board of Directors of a memorandum of understanding to take part in the establishment of a permanent Amateur Radio presence aboard the International Space Station. The ham station on the space station will be known as ARISS. The memorandum of understanding was hammered out last November by an multinational group meeting in Houston, Texas.

INTELSAT ON THE WWW

Want to learn about satellite blackouts due to seasonal changes? The Washington, DC based Intelsat corporation has started a new site on the word wide web to provide information to Earth station operators regarding

the autumnal and vernal eclipse seasons. These are the days when the sun is in a direct line with the satellite being accessed and the feedhorn on the satellite dish. This makes geostationary satellite reception almost impossible for a short period of time twice a year.

According to Satellite Communications magazine, the internet home page address for Intelsat is simple to remember. It's

http://www.intelsat.int

(Via Satellite Comm Magazine)

SETI-AMSAT AFFILIATION

AMSAT North America has approved a request from the SETI League Inc. for the two organizations to affiliate. For those hams not aware, the SETI League was formed several years ago to coordinate a privately funded scientific search for extraterrestrial intelligence.

Dr. H. Paul Schuch, N6TX, is the Executive Director of the SETI League. He says that his group can make technical contributions to AMSAT in the area of microwave communication.

And AMSAT North America's Executive Vice President Keith Baker, KB1SF is also pleased. Baker says that AMSAT and the SETI League share a common objective that involves many radio amateurs in scientific exploration, research and development.

Both AMSAT North America and the SETI League are not for profit educational and scientific organizations. AMSAT has some 7000 members while the SETI League's 400.

NEW LINKS FROM NEWSLINE

Newsline has added two new links to its home page on the World Wide Web. One direct connect is to the home page for the May 1997 Dayton Hamvention. There you will find information on hotel accommodations, Hamvention parking, transportation and lots more. Also some history on both the Hamvention and on its sponsor, the Dayton Amateur Radio Association.

The second new link takes you to Holland to Jonathan Marks, G8WGN and the English Department at Radio Netherlands. Marks is the longtime host of the very popular Media Network communications magazine program. On the Radio Netherlands home page you will find all sorts of information about the broadcaster and its worldwide programming.

This link joins to other radio programs popular with hams. These are the home pages of Art Bell, W6OBB who hosts Coast to Coast AM and that of Len Winkler, KB7LPW at Ham Radio and More. You will also find the text

version of the current Newsline script, links to our audio websites, to the ARRL and much, much more.

Our home page was designed and is maintained by our Webmaster Dale Cary, WD0AKO. It's address is:

http://rrnet.com/rrra/newsline

(Via Newsline)

IARU EXPANDS

On the international scene, news that the International Amateur Radio Union has five new member. All in Region 1 and joined the IARU in 1996.

The new members represent radio societies in Uganda, Mali, Tanzania and Moldova. Also joining was the Tajik Amateur Radio League. This brings to 151 the number of countries and separate territories that are represented in the IARU.

(Via ARRL)

(*****

UK CALLS OUTSIDE UK

Also, the Radio Society of Great Britain is advising British amateurs operating in foreign countries that under the terms of the CEPT licensing agreement they must use M0 or M1 as a prefix before their own callsign. According to the RSGB, it appears as if some United Kingdom amateurs are unaware of the new ruling and are using the old G prefix instead. Doing so, is not legal under the CEPT rules.

ICEBERG TRACKING HAMS

A group of Australian hams will be assisting in tracking an iceberg the size of the state Rhode Island that sheared off the coast of Antarctica last year. The iceberg is so massive that scientists say that could drift for 10 years before it melts.

According to news reports monitored on shortwave, the mammoth iceberg was first observed by a research ship scouting for large ice drifts. Australia's Antarctic Division is tracking the vast fragments through U.S. weather satellites and European research satellites. The ice island is not expected to interfere with maritime commerce since ships typically avoid Antarctic waters. However, with the massive floe expected to last close to a decade before melting, hams have been pressed into service to aid in relaying long term observations. The iceberg covered more than 1400 square miles when it split from the coast of east Antarctica one scientist said.

Hams were asked to take part because of the years of monitoring that will be involved.

READERS NEEDED BY HANDI-HAMS

The Courage Handi-Ham Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

This volunteer work can be done at home and at your own as long as there is a quiet place to read. For more information please contact:

Courage Handi Ham System
3915 Golden Valley Rd.
Golden Valley, Minnesota
55422

or call them at (612) 520-0515. They also have an easy to remember e-mail address. It is simply:

handiham@mtn.org

(Via Handi-Hams, ARRL Letter)

RAIN NEEDS HELP

A blind ham who has spent over a decade providing Amateur Radio programming needs your help to continue. On New Years Eve, the equipment used by Hap Holly, KC9RP, to produce the Radio Amateur Information Network bulletins was severely damaged in a fall. As a result, all RAIN ham radio programming is at a halt until further notice.

The unit damaged was Holly's Tascam model 244 Porta Studio. This is a self contained professional quality multi-channel audio mixing console with a built in four channel cassette recorder. Holly says that the Porta Studio serves as the cornerstone of producing both the RAIN Journal and the RAIN Report. He cannot do his work without it.

"I use this primarily for RAIN. I use it to record scripts, to edit down the excerpts from the Dayton Hamvention Forum, and I also use it to equalize the audio on the phone line for the RAIN Dial up. So when the people call the RAIN Dial up the audio is as good as it is because of this unit." Holly

The local service center says that it could cost RAIN up to a thousand dollars to rebuild the unit. Neither RAIN nor Holly personally have the needed funds to perform the repair at this time.

Because of this, a special emergency fund has been set up by RAIN supporters in the hope of garnering enough donations so that the equipment can be fixed. Donations should be made out to the Radio Amateur Information Network and sent to:

RAIN
P.O.Box 2565
Des Plaines, Illinois
60017

RAIN also maintains a home page on the world wide web at:

http://www.rrsta.com/rain

Message-ID: <01bc00ee$f0ab35e0$4a01e8cc@home>
Source record: 207305

I have a REAL problem with those who assume a call was issued to a FAMILY. Chances are, the offspring will not be the same type operator (better or worse) than the origional call. Why in the world would someone think a call was issued to a family?

Sorta like saying the name BILL can only be used by one family. There are a finite number of calls and they need to be recycled.

> their stations).

Many businesses, including a newsletter writer, a balun maker, a
hardline transformer maker, 2 DSP unit manufacturers and a training
materials publisher, to mention just a few, quite properly use their
amateur licenses and call signs as part of their business promotions.

S97.113 refers only to prohibited transmissions and does not restrict
promotion or any other business activity connected with an amateur
radio station or an amatuer radio license.

Well, I'm sure this has been mentioned before, but a 2X1 call is about
the worst possible call for working DX, IMHO. Even though these calls
have been around for years now, many DX stations believe they are
missing the last letter when they hear a 2X1 call under difficult
conditions.

So, in some cases at least, there's more than vanity involved :-).

Hi Stan,

I made the effort, passed the hazing, upgraded, and you know what? I still think the fast code requirement is a load of crap. I have what I want, am not asking for anything, and yet I still think we should loose the code test. No accounting for some people I guess. Sorry Stan code test or not I find myself in agreement with the basic ideas Carl and Len present.

At a recent hamfest I met a rabid procode jerk who was pontificating about how "We should retest CW every year." Engaging this twit in conversation I posed a few questions any Tech or General should have easily answered. You guessed it he couldn't field one. I brought this to his attention and suggested yearly written testing. Boy oh boy I haven't been cursed that well since I quit being an umpire. Checked his call he has been licensed long enough to have been Noah's radio man op Don't tell Vince, but it looks like we "dumbed down" some time back.

Speed Kills Stop Fast Code Testing

Since I have not operated in Mexico I have never checked the details. I tried to access information from the ARRL web page but did not find specifics. I will ask David Liberman at UAM for the scoop and a copy of the rules. Since you have done it recently and my information is vague I expect you are correct. I was a bit confused by Steve's post. If you were issued a license and abided by the terms of said license how would you be a pirate? What I think most here don't realize is that most countries don't have a caste system like we do here and an amateur license is just that. Unfortunately we tend to be a rather chauvanistic people in the US thinking the rest of the world operates by our rules in some cases this thinking has proven fatal. I am not that much interested in the argument but agressive stupidity occasionally riles me. By the way I can't take credit for the "neck stopping traffic" quip but I like it.

I used #8 wire because as a Ham I use SSB. 500 watts peak (@50%
eff=1000 watts DC input peak)1000 dc watts = 73.52 amps @ 13.6VDC.
Now if I were to use CW with a brick on the key, granted those wires
will get little toasty even though #8 wire is rated at 73 amps
countinous current in individual runs.

I use a 1 Farad cap to keep the voltage up to 13.6. The cap is located
only a few inches from the amp and has the same basicly the same
effect as mounting a battery in the same location.

Using the 8 to 1 comparison it still runs cool.

Hmm.

Well, I've been an extra for over ten years and lived with the Advanced
call KE7GW (and like it very much, btw). I was quite disappointed that I
wasn't able to upgrade to an extra call that I liked. (When I upgraded,
the available calls were 2x1 N calls. I didn't want one.)

Recently I changed my call to N7LN. I'm quite happy about it.

I also found out who owned the call before me; it was (L)arry (N)elson
of Phoenix, Arizona. I also found out he was known as "Loud Larry" for
his QRM and was fined numerous times by the FCC. He was apparently shot
and killed by a police officer about five years ago during an attempted
armed robbery at a local 7-11.

Hmm.

Guess I'm not worried what his friend and/or relatives think. (But I AM
worried about being mistaken for him and getting railed on while on HF!

I haven't used it yet on HF, but I'm kind of leary... ;))

At any rate, it's my call now. He can't have it back. And I'm not going to worry about who had it before me. It mine Mine MINE!

>
>Slowly breaking the cable, hot terminations, and disappearing insulation
>is more likely to cause a cable fire.

Thanks to everyone for giving me good advice! Several people
mentioned things that I had not thought about.

Here's a summary for those interested:

1) Visit a car stereo supply store for cable, etc. They're cheaper
than most places, and are familiar with this type of install.

2) Make sure the cable doesn't flex, a flex point can cause a fire.

3) Run both pos & neg cables, don't depend on the frame for high current

4) Fuse BOTH leads near the battery connection point (if the ground strap
were to break, my starter's 200 amps will go through my cable and
my car will become a smoldering heap of melted plastic)

5) use some sort of quick-disconnect near the end so that I can rapidly
disconnect if I have a catastrophic failure of some type.

All very good advice, and I hadn't considered #1, #3 & #4.

Thanks!

As long as your equipment doesn't interfere with any electronic equipment on board the vessel, and you're either on the open sea or within US territorial waters, you'll be ok. Keep in mind that the FCC's jurisdiction ends 12 miles out from shore, and no one has jurisdiction on the open sea. However, you may be technically within another country's authority if the ship enters their territorial waters.

I can't understand what the fuss is all about, some say the code filters out the kooks, some say its a rite of passage, some just think that "if I had to do it you do too" well for some people, these may be true in their own minds, however, there has ALWAYS been an answer in place, which is the C.W. bands, period, I won't go on the C.W. bands, simple right? as a filter, I've heard 20 meters, 14313 and I'll tell you right now I wonder if this imaginary filter is working or am I to act like that when I upgrade? I mean if code is a wonderful filter, should we use it when everyone renews their licenses to KEEP the kooks out? just to make sure that anyone with a slipped cog stays off the frequencys? Well, my thought is, start using our heads for the future, and let the past take care of itself, meaning, lets work on setting our standards forward, not keeping stagnant like we have been, I mean, can anyone or everone with a higher class license actually fix a radio? build a kit? be a elmer? or is your time a factor, like mine is to learn the code. Just a thought,

REVIEW: Shortwave Receivers Past & Present, 2nd Edition, Fred Osterman

This guide covers communications receivers from 1945 to 1996 and details information on over 500 table-top models. The radios it deals with are not ordinary table broadcast units but specialized pieces of equipment made for amateurs, short-wave listeners, military and government customers. Many of the older receivers are highly sought after by collectors, hobbyists and hams who are interested in "Boatanchors", a term of endearment for older, tube-based (and consequently heavy!) equipment.

Initially there is information on buying a used receiver, restoration and repair, a bibliography of periodicals, publications, clubs and on-line resources on the subject as well as an explanation on how to use the guide. Each manufacturer is given a chapter. A short discussion about the company, its logo, addresses and other general information follows. Each model is generally given a half-page with just about everything you'd want to know about the radio short of having the manual. Just some of the listings include features, specifications, circuit compliment (tubes and their function where applicable), accessories, comments, variants, where and when made, voltages, a neat symbol that indicates the type of frequency readout used, size, weight, etc. There is information of interest to collectors too, such as an estimate of rarity, new price and a general price range of current prices. The guide even has a section of radios that never were such as the Hallicrafters SX-112 and others!

Also included are the "dream" receivers - high-end equipment that most of us will never see - with names like Watkins-Johnson, Rohde & Schwarz, Harris, Racal, etc. Its nice to look at the pictures and enjoy the descriptions.....

Shortwave Receivers Past & Present is very well illustrated and produced. The author really knows his receivers, choosing models that are of major interests to hobbyists. As an example of this, Osterman has included certain military receivers such as the Collins R-390/URR and its younger brother the R-390A/URR because they are of great interest to hobbyists. Also included are the sought-after Collins 'A' and 'S' line receivers. In addition, some rare and virtually unknown receivers such as the DAVCO DR-30 and the Mosley CM-1 are included. Many of the receivers listed are from other countries. Nineteen pages is devoted to Eddystone which is a well-known British manufacturer. I found the price information pretty consistant with what I've seen on the Net and at some flea markets. A nice touch is that the author quoted a few of the

radios' values in Japanese Yen as well! Japanese enthusiasts are well known at larger US hamfests for buying up nice clean Collins and other American-made radios.

This guide is a very complete collection of equipment from all over the world and should be of great interest to anyone interested in radio receiving equipment. It is available from the publisher.

> than most places, and are familiar with this type of install.

Very true.

> 2) Make sure the cable doesn't flex, a flex point can cause a fire.

Not true. As long as the cable is not coiled up or have any kinks around =
sharp corners, there is no reason why the flexible cables aren't safe. =
I've been running 8 gauge in my setup for my 2 audio amps (about a 4m =
run I think) and I haven't had any problems at all (the amps draw 45A =
all together).

> 3) Run both pos & neg cables, don't depend on the frame for high =
current

Not true again. The ideal grounding for any equipment is the shortest =
(and therefore, closest) point on the vehicle's chassis. Therefore, it's =
unnecessary to run both pos & neg to the battery. I've done many =
installations for people, as well as my own vehicle of course, and have =
never experienced any problems. Anything over 45A would result in me =
using 4 gauge cable instead to supply power to the amplifiers and once =
again, using the vehicle's chassis as an earthing point. Don't know how =
well/poorly made the American cars are up there but I'd imagine that =
they're every bit as good as the Australian and other imported cars! =
This is perfectly safe, and there's no chance of any failures as such.

> 4) Fuse BOTH leads near the battery connection point (if the ground =
strap
> were to break, my starter's 200 amps will go through my cable and
> my car will become a smoldering heap of melted plastic)

In the case of just wiring the pos lead only as I suggest, just fuse the =
positive lead. That fuse is definitely imperative so that point is well =
suggested and should be well heeded.

> 5) use some sort of quick-disconnect near the end so that I can =
rapidly
> disconnect if I have a catastrophic failure of some type.

Yep.

> checked.

That is not true Gerry ... I was a (US) Tech+ with a full XE2/(uscallsign)
Mexican reciprocal license ...and there were many of us ... there
there were also quite a few Novices with XEx(uscallsign) calls ... you
might not get the straight story from the Consulates, because the radio
rules are under Secretaria
de Comunicaciones y Transportes (SCT) ... the Mexican FCC counterpart ...
the Consulates may not know all of the details, but they'll likely give you
an "authoratative" answer anyway ... bureaucrats is bureaucrats ...
especially in Mexico.

I was on visiting terms with the Chief Engineer for the entire region in La
Paz, BCS.
(one of the local hams ... VERY cordial and hospitable ...)

Congratulations.

I have Sheriff offices that have run #12 wire for light bars, sirens,
and radios, for years. When they finally burn up, they come to me,
and have our people do the installs from then on.

Do something professionaly, do it right, the first time, and you will
not have problems.

Run #8 wire, for a 50 amp load, 20 feet, and you WILL have
problems.

The Cap makes no difference.

Is that 500 watts continous single tone or PEP? The application for which wire gauge was requested was for an *inverter*, not an amplifier with a speech waveform duty cycle. That's a very different thing. The difference between speech PEP and single tone is typically 8:1, so what works on your 500 watt PEP amp would only serve a 62.5 watt single tone continous load such as an inverter. The capacitor would serve no purpose since the peak to average ratio is 1:1.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated December 29, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

JANUARY 1997

Jan 5 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Jan 12 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Jan 12 (Sun), Waukesha, WI - 25th Annual Midwinter Swapfest. Waukesha County EXPO Center, Waukesha, WI. West Allis Radio Amateur Club (WARAC) 8:00 AM $3.00/$4.00. Amateur Exams. Ham Radio. Computer. Electronics. For Information Contact WARAC Swapfest, PO Box 1072, Milwaukee, WI, 53201 or Phil Gural, W9NAW, tel (414)425-3649.

Jan 19 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

Jan 26 (Sun) - Villa Park, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - '97 at the Odeum Exposition Center 1033 N. Villa Ave., Villa Park, IL. Doors open at 08:00 till 14:00

FEBRUARY 1997

Feb 2 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Feb 16 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Feb 16 (Sun), Rock Island, IL - Davenport ARC. Contact Don Schneider, WD0AMA, (310)-388-0108. email dschneir@saunix.sau.edu

Feb 23 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH 1997

Mar 2 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Mar 9 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Mar 9 (Sun) - Waukesha, WI. SEWFARS Swapfest. Waukesha County EXPO Center, Waukesha, WI 8:00 AM Talk-in on 146.820 pl 127.3 $4.00/$5.00 Ham Radio. Computers. Electronics. Amateur License Exams. For information Contact SEWFARS, PO Box 102, Delafield, WI 53018. 414-650-0724

March 23 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. VEC testing. For Information contact LAMARSFEST, 650 Green Bay RD, Lake Bluff, IL 60044.

APRIL 1997

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zancha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds. Free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

Jun 8 (Sun) Six Meter Club of Chicago. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Contact Joe Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

JULY 1997

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc. (RARA) Amateur Radio and Computer Hamfest. Winnebago County Fairgrounds, about 15 minutes west of Rockford, Il. Talk in on 146.61 MHz, 114.8 Hz PL. This will be in the main exhibition hall with room for tables. Ham Radio Vendors, Computer parts vendors, tailgating, food. Code receiving contest, Throw the Radio contest, Great door prizes. For table reservations contact Mike Anderson at (815)397-4304 or mander5@ix3.ix.netcom.com. For any other information contact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com.

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Contact Bob Grosse, N9KXG. Info (voice/fax) (708)658-1678. http://www.angelfire.com/il/tcrg/

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM

- 3 PM. To get on the mailing list or get more information,
call (708)974-3123.

Well, in the area of RFI, the ARRL has always recommended to hams that if
they put up a new tower, they should not connect the transmitters to the
coax until they take care of all the RFI! :-)

o

Stupid lawsuits are not a new thing. Have heard of some little old lady suing the local trolley car transit system for causing lightning to enter into her bedroom late at night. This was about a hundred years ago. What really happened was the trolley car's electric pickup pole and wheel encountered some crud on the wire and developed a particularly bright arc. And the bright flash of light was what entered her beedroom. She must have freaked during thunderstorms too.

Lawsuits involving something related to science and/or technology are pretty much at the mercy of some group of random idiots in a jury. Someone may have reasoned that lightning is a big spark, and that arc on the trolley wire is also a spark. And that lightning doesn't take a straight path.... And that arc must have taken a big detour thru her beedroom ..... Ignore the fact that such detours don't deviate that far from a straight path.

RF fields will certianly be beyond the average person's understanding. At least one thing is that the FCC rules say anything less than 50W is safe. This might become a "de-facto" legal power limit.

Mike:

That's an interesting concept. We certainly do build "equity" in our callsigns over the years. I built some equity in my old call, KK9L, through years of being on the air with it. To go for a vanity call means that I need to "start over" and use my new call, K9XK, often. I lost some of my identity making the switch, but it is a short-term sacrifice and we all make those, if we gain in the long term.

As far as the old holder of my new "vanity" callsign, only if he is still in the hobby would the use of my new call impact him, as long as he's been out for long enough (5-10 years?) that his info doesn't appear on any databases.

Someone asserted on this group that vacated calls should be immediately available for reassignment. I couldn't disagree more. If for some reason my old call was being used in a way I didn't condone, I would be upset by it because until the world knows that I'm now K9XK, I *could* be KK9L! Personally, I'd like MORE than two years to establish my identity!

: Funny that the reciprocal license to foreign hams is FREE but we have to
: pay $55 to operate in Mexico. Time we start charging countries that
: charge us.

: How can our deficit ridden country afford to give reciprocal licenses
: away for free when Mexico charges $55? Something's wrong here.

On one hand, I'd like to see the reciprocal agreements require that other countries abide by our no-fee arrangement.

On the other, I don't have a problem with a modest administrative fee. After all, I would be taking someone's time, to process the necessary paperwork.

In this case, it's not worth it to me, for a week. Perhaps a 30-day freebie would be a good policy. Any longer, I'd have no problem with paying.

Hi Brian,

Well, for what it's worth, here's a list of the nets I've run across...
I haven't updated the list since last year, and don't listen to all the
nets, so can't guarantee it's still current...

Thought others may be interested, so posting it here...would appreciate
any corrections/additions being E-mailed to me...thanks.

All times UTC:

Sunday -

Florida Net - 3.945@12:30 // 3900 Trader Net - 3.902@13:00 // North Card
Net - 3.913@13:00 // Georgia Traders Net - 7.275@13:00 // Knwd/Icom Net
14.317@17:00 // Texas Traders Net - 7.235@19:00 // Collins Net -
14.263@20:00 // Horse Traders - 3.942@21:00 // Continental Traders Net -
3.922@00:00

Monday

Central States Swap Net - 3.920@00:00 // Gator Traders Net - 3.898@00:00

Tuesday

None found...

Wednesday

WA2PZI Net - 3.865@00:00 // Florida Net - 3.945@00:30

Thursday

AM Swap Net - 3.885@00:00 (on am - not ssb)

Friday

3975 Traders Net - 3.975@00:30 (check freq + - 3kc)

Saturday

Georgia net - 3.985@12:30 // Midwest Classic Radio Net - 3.885@13:00 //
Old Gear & Junk Net - 7.275@14:00 // Drake Net - 3.865@00:00

That's about it...like I say, I haven't listened to them as much as I used to, so some listings may be totally wrong by now. Check out the freqs at the indicated time and tune around a little to see what's there...enjoy...

Is there any country other than the US that issues reciprocal
licenses for free? I've had two and investigated several others, and
there's been a charge for all of them.

I do agree that the US should charge for reciprocals. In fact, I
think the US should charge for ALL amateur radio licenses,
on a sliding scale, $1./yr for Novice, $2./yr for Tech, $3./yr for
Tech Plus, $5./yr for General, $10./yr for Advanced, $20./yr for
Amateur Extra.

: Funny that the reciprocal license to foreign hams is FREE but we have to
: pay $55 to operate in Mexico. Time we start charging countries that
: charge us.

: How can our deficit ridden country afford to give reciprocal licenses
: away for free when Mexico charges $55? Something's wrong here.

On one hand, I'd like to see the reciprocal agreements require that other
countries abide by our no-fee arrangement.

On the other, I don't have a problem with a modest administrative fee.
After all, I would be taking someone's time, to process the necessary
paperwork.

In this case, it's not worth it to me, for a week. Perhaps a 30-day freebie
would be a good policy. Any longer, I'd have no problem with paying.

Well, as the cook said to the kids when they complained that someone ate
all the cookies THERE'S ALWAYS TOMORROW.

But really Carl..insults??? And after Len was saying that only the
procode advocates resort to them...tsk tsk

What would Rush think??

BTW, do you play golf??? Do you, like some on the pro tour, kiss your
balls for luck??? I hear that it makes your putts go straighter??? Is
that true..I wouldn't know..golf is for an elite few, who have proven
themselves with the ability to speed alot of money on equipement with
very little to show for ability. Kinda like amateur radio, wouldn't you
say?? But I digress, this is an amateur radio newgroup, not an
experimental aircraft or golf newsgroup and I wouldn't want Newsgroup Cop
Lennart to get bent out of shape

Does any one know about any Traders Nets on HF or VHF?

If you can tell me the UTC TIME and FREQUENCY
that these nets meet on I would really appreciate it.

I keep alist here for anyone that would like to see what I already
have:

It's in the ham radio resources area at the URL below.
Under HAM FILES/ SWAP NETS.

Let me know what you can guys. Thanks

That's good to hear. According to the QRZ server, there are 57 "available"
1x2 callsigns for California. Since this has been a static state for about
a month, I was beginning to wonder if these remaining callsigns were
unassignable.

I can't understand what the fuss is all about, some say the code filters out the kooks, some say its a rite of passage, some just think that "if I had to do it you do too" well for some people, these may be true in their own minds, however, there has ALWAYS been an answer in place, which is the C.W. bands, period, I won't go on the C.W. bands, simple right? as a filter, I've heard 20 meters, 14313 and I'll tell you right now I wonder if this imaginary filter is working or am I to act like that when I upgrade? I mean if code is a wonderful filter, should we use it when everyone renews their licenses to KEEP the kooks out? just to make sure that anyone with a slipped cog stays off the frequencys? Well, my thought is, start using our heads for the future, and let the past take care of itself, meaning, lets work on setting our standards forward, not keeping stagnant like we have been, I mean, can anyone or everone with a higher class license actually fix a radio? build a kit? be a elmer? or is your time a factor, like mine is to learn the code. Just a thought,

>associated with it. Again, if non profits can do it why can't we?

Well, I'll just restate my original argument that others doing it doesn't make it right. Moral relativism is what slowly degrades society's ethics (by desensitizing us to progressively more immoral behavior with the excuse of, "he's doing it, so I'm going to get mine, too").

> >Roland also doesn't seem to
> >understand that we have budget deficits because we are bleeding

>This has nothing to do with paying for callsigns but I'll address it.

Excuse me sir, but you started this thread with the following text
(which you pruned from your followup):

>So what if there's trafficking? The whole thing is about getting the
>callsign that you want right? It's also about money, the more the
>callsign is transferred, the more money Uncle Sam gets. Good way to
>reduce the deficit. We should go back and change that to one year.

which I read as, "whatever raises revenue is good, it's all about money,
giving Uncle Sam more money is good." I disagree for the reasons that
I previously gave, which are on the topic of this thread, and related to
the selling of callsigns.

>Lookie here mister, it's the middle class that pays the vast
>majority of the taxes in this country. We're intitled to benefit from
>entitlements that we've paid for.

First that's a circular argument. How about instead eliminating much of
those programs, therefore removing the need for the massive streams of
revenue that strip the middle-class of between 25 and 35 percent of
their income? Second of all, not everything you put into government is
supposed to be given back. Even if you are a strict constructionist,
maintaining armies for national defense and regulating interstate
commerce requires funds that you'll never see again. If you are more of
a bleeding-heart type, welfare is supposed to be a (ideally) temporary
charity to the needy, not some sort of "I'm entitled to it!" boondoggle
for the not-so-needy. Third, such entitlement spending is growing
faster than our ability to pay for it (measured by our Gross Domestic
Product), and no, it's not all "welfare cheats," not bya long shot.
Consider also that fact that most government direct benefits programs
run at about 70% administrative overhead (which means that only 30 cents
of every tax dollar goes out as direct benefits; this is a GAO
statistic). Like with your moral relativism above, your "he got some, I
want some too!" is going to bankrupt society.

> >Furthermore, more money into the general Treasury hopper would
> >just be more temptation to dole it out in bigger helpings (and I freely
> >admit my complicity in this self-destruction, having taken financial aid
> >for college and availed myself of many other government-subsidized
> >services in the past). There is no obligation to spend tax revenue
> >streams on the groups that provide that revenue.

>This has nothing to do with ham radio. I got TAP and BEOG to pay for
>college since my father was retired and on a fixed income. What's wrong
>with that? Welfare people get everything for free: food, housing and
>medical without even having the intention to work. My father worked
>hard all his life and PAID plenty taxes until he was 67 years old.

Again, you started the thread, don't whine if someone has some substantive rebuttals to your arguments. We've played a cruel joke on your 67+ year old father (and my 64 year old mother) by structuring a Social Security system that's beginning to resemble a pyramid scheme. And your father and my mother are probably the lucky ones, standing to get back many times more in lifetime benefits from Social Security than they put into it. I've seen estimates of our children and grandchildren paying up to 85% of their income on Social Security payroll taxes by the middle of the next century just to cover current beneficiaries. There just isn't enough more revenue to be raised to cover that kind of shortfall. Something has to give somewhere.

The point I was making was that if I didn't have financial aid, I would have found some way to pay for college, such as via working. You may have been truly needy and deserved those benefits, I wasn't presuming to judge your situation. For me, and probably for a lot of other students, it was a nice benefit, but not absolutely necessary, particularly if it is part of a larger set of government programs with defined statutory payouts which we then have to stick up the middle class to pay for. The fact that others are abusing the system doesn't mean we automatically get to dip our hand in the till also.

> >We are also selling
> >off precious, publicly-owned, resources (public land and radio frequency
> >spectrum) that will raise but a pittance in the overall budget picture,
> >but will represent a far greater, and permanent, loss to our national
> >heritage. That is certainly a short-term gain/long-term loss situation
> >and indicates that no, it is certainly *NOT* all about money, even in a
> >free market society.

>What does this have to do with paying for callsigns? Sounds more like a
>beef against congress pressuring the fcc to sell off spectrum.

It has everything to do with focusing just on "raising revenue" (which you said above was unquestionaby a good thing) without looking at either the merit of the programs we are spending money on, or more importantly, the irreplaceable resources we are permanently selling off to pay for them. The fact that such things are legitimate concerns is prima-facia evidence that it is *NOT* just "all about money."

This reminds me of another forgotten art, the method of injecting RIT dye into the coax while transmitting while someone outside watches to dermine the direction of the power lobes of your antenna system.

Also if you park on Railroad tracks while running HF mobile it will increase your signal strength due to the excellent ground of the RR tracks.

Sparky KI5GY

Mike Bailey (mhbailey@mhtc.net) wrote:

: The dilemma is would I be offending the original holder or
: friends of the original holder by asking for and perhaps
: receiving the call in exchange for KW9N? I ask the question here
: because this seems as much a ham community issue as it is a
: personal one.

One of the possible choices I envision for a vanity callsign is that of a former club member who passed away several years ago. He was an outstanding member of the ham fraternity, and we often worked in the same tent at Field Day.

I would certainly run this choice by my fellow club members, as well as his widow, before making the application.

In the case of a callsign held by an unknown ham, well, if his family had wanted the callsign and were qualified to get it, they probably would have applied during Gate 1.

Well, I tend to agree with all.....and good shot at some humor. Nice to
have to use ones brain to get it.

With the vanity callsign program winding down, at lest for the moment,
maybe it's time to find out just why some of these calls are some
special.

I don't have the background to start a news group so maybe someone out
there will see the same intrest I do and start on pretaining to vanity
calls. Since most of us went from 2x2's or 2x3's so they would be easy
to remember and use, maybe we best make the news group equally as easy.
How about "This is my vanity call and why it is special to me"?

I think you get the idea, I'm sure there are some interesting stories out there as to why some have asked for that special call. Beside it sure bets reading all the spam that goes around from time to time.

Bill N5WO formally KD5JR formally N5CMW formally KA5BCO

Try N5 Woodward Oklahoma which is where I live
Or North 5 West Oklahoma which is where Woodward, Ok. is
Or N5 Wonderful Operator which is what I am (remember it is vanity)

I'm sure there are some equally catchy call and phonetics out there for other calls. And, who knows maybe it'll make QST

Bill Wyatt N5WO "It's a Woodchuck"

1057. Ham Logging Software

Looking for a logging software package that is inexpensive and
does most of what the very costly packages do ? I found one !
Visit : http://www.geocities.com/SiliconValley/Pines/2084
I think this just might be what you were looking for - an old
fashioned deal ... good product and low cost ! There's a free
download there also !

No problem fitting a 1 farad capacitor in a car, even a model car.
Panasonic will sell you one about the size of a lithium watch battery.
My camcorder uses one instead of a memory battery.

It won't do anything to keep a 50 amp current from burning up a too
light gauge wire, however.

Mike, there are no rules. Whatever works best for you. If you have the
time and money, every contact. If not, pick and choose. If you decide
you want the other guys card, a sase is usually the best route.

Have fun, remember, it's a great hobby

makes a case for lots and lots and lots of radio operators so it will be
very difficult to not have someone around in every jury pool then?

> RF fields will certianly be beyond the average person's understanding.

it would be one approach (wondering if this isn't the setup to
authoritatively be able to put the hammer on the CB bootleggers..?)

There used to be a GREAT listing and description of MANY models of
military surplus equipment available on the web at:

http://linux.cec.army.mil/hamradio/equipment/mi.html

It no longer works! Does anyone have any idea where it has been moved
to or has it just disappeared?

ANY help would be appreciated!

Thanks! Bry, AF4K

Steve,

Don't slobber all over yourself, it's unbecoming ... but, come to think of
it, that's your
style ... so I guess it's par for the course ...

ANYWAY, Gerry is mistaken, unless the rules have changed in the year and a
half since I came back to the states.

ANY valid US license, copy of your passport, and the very nominal license
fee
will(would) get your an XEn/your_US_callsign Mexican license with full ham
privs on all bands all modes. (the fees are quite cheap, nobody's getting
rich running a "license mill" ... it just covers the reasonable cost of
administration)

All of the above is/was common knowledge in the (sailboat) crusing
community. Most cruisers had ham licenses for messages home, phone
patches, participation in the weather/traffic nets, emergency use, and just
general kibbitzing with other cruisers while making passages.

I had my Mexican license renewed quite a few times (they are/were good for
6 months or until your visa ran out, whichever came first)

Have a Yaesu 2070 dual band commercial HT (willdo amateur.) 32
channels, rapid charger, program kit & cable, software, manual, etc.
Radio does 136-174/440-470. Can be modded to do 470-490 or any split
by factory. $650/bo cash. Please reply asap, no reasonable offer
refused.
Radio is in great condition, has a DTMF keypad, PL decode/encode and 2
tone decode board.
Must sell ASAP, $650/best offer. Feel free to e-mail your best offer
or call anytime, 415-939-1037!
This radio is worth over $700 with program kit, rapid charger, etc:

Yaesu 2070 dual band - Brand new:
Comes with: 5 Watt battery, 1-hour rapid charger, DTMF keypad encoder,
Two-tone sequential decoder (Motorola 1,2,3),Tone Burst board, Belt
clip, Programming Software/Cable/Manual.. Worth over $2,000 brand new.
See
http://maverickcomm.com/vertex/fth2070.html
for a current price.
Will consider trade for:
Icom F40 450-500 split
Motorola JT-1000
Bendix 210 UHF.
or other UHF 440-490 UHF HT with DPL capabilites & Alpha.

I think that more likely what it means is that the ARRL is being pragmatic and accepting change when it occurs. To my mind this is a good thing for an organization to do if it wants to remain effective. I am sure that everyone has some gripe or another with the ARRL. My personal gripe is that I wish they had opposed the legislation that forced scanner cellular blocking because of the horrible precident it set (they stated it was not of interest to the Amateur community). On the other hand, I imagine that the ARRL legislative staff realized that this would be a losing fight that would only make enemies among ARRL's legislative supporters.

In my opinion, the ARRL employees appearing here in the newsgroup *all* have been uniformly evenhanded, avoiding the appearance of favoring any license class over another. This sure beats the knee-jerk responses that seem to characterize *some* of this newsgroup's posters on Tech/Code/etc.; a group not limited to one side or the other of the argument, by the way.

As a side comment, I had not been reading this newsgroup for about a year. I was surprised on my return to see how little the discussion has changed in that time! I wonder if there is *anyone* left here whose opinions are not already cast in cement.

Well, I don't think Petit had $$$ in his eyes when he developed
Clover, though HAL certainly does with their commercial products
implementing it, nor did he have highly sophisticated and expensive
equipment to work with while he did it. Nor do I think Lyle Johnson
or Phil Karn have had $$$ in their eyes when they've developed new
systems and protocols. Nor did Dale Heatherington think of profit
while prototyping a 56 kb RF modem in his basement. And let's not
forget Sam Harris' invention of the parametric amplifier, or Johann's
HELAPS amplifiers flown on OSCARS.

But it is true that amateurs generally don't do new cutting edge device
physics, especially on HF, but then neither did Armstrong. Amateurs are
doing innovative work with DSP algorithms and modulation coding, however
(at least to the limits allowed by our outmoded HF regulations).

>Hams will continue to do what have have done best for decades (better
>than a lot of commercial activity, IMHO) : they will adapt existing
>technology to amateur needs, usually making it significantly less
>expensive in the process. This has always been a valuable contribution,
>and it represents the real effect of the "self-educated technical pool"
>that is found in Amateur Radio.

Yes, I agree. This is a strong contribution, value engineering is often
more innovative, and can have larger effects, than dreaming up new device
physics. The classic example is the quick release rachet socket wrench.
There's no new physics in it, and it was invented on a kitchen table,
but it has revolutionized how mechanics work. Meanwhile exotic device

physics discovered with sophisticated equipment, like that leading to the tunnel diode, is all but forgotten.

The direction radio is taking is digital. Most new radio devices will be commodity items which are software driven. And software is the ultimate cottage industry, IE kitchen table inventing. Anyone can play, and entrance costs are low. Big companies have no advantage over the lone worker, in both cases it devolves to someone sitting at a keyboard devising coding algorithms. The best work comes from individuals, not committees.

HF is a very valuable lab for this sort of work. Test equipment requirements are modest, and the challenges are large due to the nature of the medium. With the right set of regulations, some very cutting edge work could be done. Even with current regulations, some limited benefits are already coming out of basements and off kitchen tables. We've seen some very creative programming utilizing sound cards to implement functions difficult or impossible to do in pure hardware, and of course the availability of cheap DSP evaluation boards have allowed us to do things like the now common DSP audio filters, or my adaptation of Campbell's R2 into a generic software driven I/Q receiver. I expect we'll be seeing a lot more of this as digital hardware costs continue to plummet while capabilities continue to soar.

We aren't likely to see amateurs developing new microprocessors any more than we saw Armstrong develop new kinds of resistors when he was experimenting with FM. They're just parts we use. It is the way we use them, and the software we write to drive them; that is where the innovation will be found. As someone remarked recently, the Japanese dominate the $60 billion VCR and TV hardware business, but we control the $600 billion movie and TV program production business without which their hardware would be so much worthless scrap. This is the information age, and it is in how we create, shape, and manipulate information that we make our innovative mark. And that's done mostly by a person sitting in a room in front of a keyboard, not by huge industrial R&D labs full of white coated workers.

"David Spillett" <ka2ctn@NO-SPAMix.netcom.com> wrote:

>This is all fine but real-life experience is always better than
>text-book theory. I have found, through extensive testing, that the
>paint color must match the color of the sky directly over the antenna
>installation on 4/1 each year.

Actually, this is not exactly technically correct. The date of 4/1 was chosen because the sky color on that date is an almost exact average of the different colors that can be found throughout each year. Extensive testing in the ARRL Lab has shown that a piece of coax hanging at any angle somewhat up in the sky *not connected to any antenna at all* will radiate *all* of the energy in the coax if the color of the coax matches the color of the sky directly over the coax *at that time.*

There is a relatively small range over which this phenomenon holds true. As the color of the sky changes, due to varying light conditions, moisture content or clouds, for example, the SWR will increase and the return loss will actually decrease, an apparent violation of several physical laws.

We have also found, thanks to some careful measurements by Zack Lau, that if the match is EXACT, the SWR will be better than 1:1 and the coaxial cable will actually radiate more power than is put into it. This has some serious implications for QRPers or contesters, and our Regulatory Information Branch is researching the applicable regulations. If our Regulatory folks are able to weasel-word things well enough, hams could in theory use this method to run as much power as they like, all the while running less than 50 watts PEP for various regulatory purposes.

It may take a lot of research to make use of this phenomenon, however. The color match must be nearly exact. Even a few pieces of dust in the sky are enough to nullify the effect. Zack is working on some thermal-based paint whose color can be somewhat varied with an external current and controlled by a feedback amplifier. The ampifier is DC, however -- a frequency range that Zack just doesn't handle well.

One last point: for some reason, both phenomena dissapear completely at night, and black coax doesn't seem to help. Zack is evaluating this for us, but so far, all of these phenomena seems to defy calculation and computer simulation. We will keep hams informed as we learn more.

Well, I gotta' run now and grab another cup of Lab Coffee. The hippy fellow that works here at night just brewed up another pot that he says is particularly special. :-)

The CW beacons are most likely aviation beacons. They're not coming
from foreign countries. The ID's they send are not callsigns but
abbreviations indicating their locations. They have nothing to do
with the international prefix list. They are similar (might be the same)
to the abbreviations used by the National Weather Service. For example;
SFO=San Francisco, SJC=San Jose, FAT=Fresno Air Terminal.

To see if what you've heard makes any sense, check out this state by
state
list of weather station id's:

http://rs560.cl.msu.edu/weather/stations/

From what I've heard, the beacons typically run about 50 watts. In
other regions such as Europe that part of the band is filled up with
high power broadcast stations.

Source record: 207069

Has anyone experimented using 18/2 SPT-1 lamp cord
for a transmission line in lieu of ladder line etc?
I would be interested to see what the characteristic
impedence would be of it. It APPEARS to be on the order
of about 200 ohms according to calculations using hamcalc.
Can anyone suggest a way to measure it using a MFJ
antenna analyzer ? I have one of those and think it would be
interesting to try.

Boy, do you have this all wrong! My experience with this method is that by
matching the coax color this close to the sky produces vast RF leakage
directly out to the sky rather than making it to the antenna.

The 1997 Orlando HamCation (SM) and Computer Show, sponsored by the Orlando Amateur Radio Club, will be held on February 14, 15 and 16, in Orlando, Florida. The Orlando HamCation is the second largest hamfest in the southeastern U.S. with over 400 swap tables, 150+ commercial exhibitors and the largest tailgate area in the southeast. We will have many interesting and exciting forums/seminars/workshops. In addition, the programmers and experts in APRSdos, WinAPRS, MacAPRS and JavAPRS will be present to answer your questions.

For further information about the Orlando HamCation, please visit the Orlando Amateur Radio Club's home page at:
http://www.cycat.com/users/oarc
or go directly to the HamCation URL at:
http://www.cycat.com/users/oarc/hamcat.htm

We hope to see you here in sunny Florida and that you will enjoy the Orlando HamCation!

An even better reason is that Morse code is no longer a justifiable means to determine if the individual is properly qualified to operate an amateur station on the amateur service frequency allocations below 30 Mhz. As a result, Erikson's reasons for elimination of Morse code testing are moot.

I have the folling to sell as a package:
1- ICOM ICW21A (Dual Band Handheld)
Will recieve from 50mhz-999mhz
5watt,Dual Band, Battery Pack
1- ICOM SpeakerMike - W/DTMF Pad
1- ICOM Spare Battery Pack (W/Microphone in Battery)
1- ICOM/KENDOO Rapid Charger (1 Hour)
1- ICOM Case for Radio
1- 35Watt Amp/PreAMP

I have the original boxes and all the manuals. This unit is in perfect shape.
Would make a great mobile rig (giving you 35 watts of output).

$250.00 takes it all including shipping.

gsparks@ix.netcom.com(Glenn Sparks)
shared these priceless pearls of wisdom:

->Also if you park on Railroad tracks while running HF mobile it will
->increase your signal strength due to the excellent ground of the RR
->tracks.

I found out a long time ago that the stuff they use to make the stripes on the road reflective are also metallic and make a hell of a good longwire antenna. I've got a spring arrangement with a brass wiper on the driver's side. The only problem is when I get off the freeway onto the back county roads with broken striping is that the signa gets broke up wit a lot of QSB.

I've been reading the pro's and con's of the code requirement for some time now. Although I see many good points on both sides, it seems that most of the pro-coders think along the lines of the above quoted text.

I work as a computer engineer for one of the "big three" computer companies, and have worked in the computer field for over ten years. I can relate the code vs. no code argument to the DOS vs. Windows argument.

For years I have heard the die hard DOS users degrade those who would use any of the high level languages or operating systems as people who were "too dumb" to learn how to use DOS, or "too lazy" to write their own software.

However, it was the introduction of the high level operating systems which spawned the increase in sales of computers, and as a result, the manufacturers were motivated to develop better hardware and newer technology. This, in turn, has created many new computer users and software developers.

The end result of the introduction of high level operating systems and simplified user interfaces is that the average computer user today is vastly more computer literate that they were just a few years ago.

If the computer industry had insisted that in order to use a computer the user had to know how to write their own software, or use only DOS for an operating system, then low cost high performance computers, the "computer revolution" or the "information super highway" would not exist today.

I wonder if the pro-coders who have personal computers are consistant with their philosophy, run only DOS, and write all of their own software using only low level machine code?

1090. Q: CLASS A AND CLASS C AMPPLIFIERS

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-15 00:00:00 UTC
From: UN93B <UN93B@ford.com>
Message-ID: <32DD975C.3A6@ford.com>
Source record: 207078

Consider two amplifiers of equal output
as measured on a Bird 43P.

Amp 1 is Class A
Amp 2 is Class C

Is there an advantage for range for one over the other?

Lets not get into SSB, efficiency, and power dissipation.

With the reduced conduction cycle in class C wouldn't the output
power be less even though the Bird says otherwise?

Thanks, Brett

Notes
=====

The distances were calculated using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details of the calculation method are available on request.

Propagation modes are those reported by the stations concerned. However, it can sometimes be very difficult to distinguish between propagation modes. This is especially so on 50 MHz, where mixed-mode QSOs are common, and to a lesser extent it applies on 144 MHz. The propagation information should be read with this in mind.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station location becomes available.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

1102. A WONDERFUL FREE GIFT FOR YOU !!

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-15 00:00:00 UTC
From: Hypno123@concentric.NET
Message-ID: <199701160328.WAA15748@newman.cris.com>
Source record: 207090

(First, please accept our sincere apology for sending this e-mail to you.
But, WE REALLY DO HAVE A WONDERFUL FREE GIFT FOR YOU).

YES,

We are about to mail you an exciting and wonderful gift, and
yes it's free. Absolutely FREE ! There is no catch or any kind
of strings attached to it. And don't worry, we NOT even asking
you to buy or to sell anything to receive this Free gift.
It's simply FREE for you !!

Find out what it is and you will definitely THANK US a million
times once you receive this Free gift .

This is definitely mind boggling, this is amazing, this is powerful.
This Free gift will astound you beyond your wildest imagination!

USE THIS GIFT FOR FUN, USE IT TO ENTERTAIN YOUR
FRIENDS/FAMILY, USE IT FOR YOUR OWN BENEFITS OR
USE IT FOR THE BENEFIT OF OTHERS, OR USE IT EVEN
TO MAKE MONEY. But please, whichever way you use it,
DO NOT mis-use the power of this wonderful gift !!!

It's Free for you, all you have to do is to request for it !!!

WHAT'S INSIDE THIS FREE GIFT :
A very "Powerful Secret Hypnosis System". The
Secrets which have been kept sealed behind the iron curtain
for over 70 years and only few people know about this in the
entire world, Secrets never revealed to general public before.

You have probably seen this on NATIONAL TV, on many
TALK SHOWS, but they NEVER revealed to you the Secret
of 'How to Do That'. We are now ready to break the seal and
reveal the entire Secrets SO EVERYONE CAN ENJOY AND
BENEFIT FROM IT !

Please do not ask WHY we giving this great and The Most
Powerful Secret Hypnosis Program in the world for Free when
we can easily charge $500 to $1,000 per person for this very
Secret Hypnosis Program. Well, have you heard of " Good
Samaritan "? That's it and that's all you need to know. It's our
way of saying " HAPPY NEW YEAR" to you.

Now, find out what this can do for you BEFORE you request
for this Free gift. This may NOT be for you, but find out anyway:

***** LEARN WITHIN HOURS, how to hypnotise ANYONE ,
ANYWHERE, ANYTIME AND IN ANY SITUATION
***** Make things you desire appear in your life seemingly out
of thin air
***** Make the man or woman of your dreams appear before
your eyes, no matter where they are
***** Create RICHES & ABUNDANCE, make your fortune in
actual cash piled up right before your eyes
***** Give yourself and others the power of HEALING, treat and
eliminate any pain or sufferring
***** Get rid of any bad habbits
***** Make others work for you and actually go out of their way
to help you and to please you
***** Raise your Mental Powers & I.Q. from that of an ordinary
person to that of a Genius in minutes
***** Win the heart of anyone you desire, whether it be for the
good of your business, jobs or personal life
***** Look into your 'NEAR FUTURE' and find out what lies
ahead of you
***** Plus much much more *****

These are some of the benefits of this very powerful and THE
MOST AMAZING HYPNOSIS SECRET SYSTEM in the world.
This is our Gift to you, FREE. All Secrets are explained with easy
step by step instructions and illustrations. You need NOT spend
5-10 years to study to become a Psychologist or a Hypnosis
Expert. It's all right here for you PLUS MORE !

The very surprising thing is that you can master some of the
techniques within just a few hours and the entire system within
2-4 days, amazing! And you DO NOT need any Special
education or any technical training for this. None, absolutely
NONE WHATSOEVER.. Anyone who knows how to read can
master this program within 2 to 4 days BY USING SECRETS
REVEALED in this FREE gift. That's why we said earlier "this
is totally amazing, this is mind boggling, this is powerful ..VERY
VERY POWERFUL !!!

We are giving this billion dollar secret system for Free to the
first 500 people who would request for it. However, there is
limit of only 10 from each State including Alaska & Hawaii.
Sorry, but we only have 500 sets to give away for Free and
so we decided to spread it nationwide for only 10 users in
each State .

PLEASE NOTE:
We are sending this e-mail to only 25 people at random in
each State. Out of 25 receiving this e-mail, only 10 REQUESTS
WILL BE ACCEPTED FROM EACH STATE on a "First Come,
First Served" basis...or until January 25th'97, whichever comes
first ! So hurry up and send in your request TODAY !!

ON A PIECE OF PAPER, please write down your Name & Your
Mailing address clearly and send it to us on the following address.
The ENTIRE SECRET HYPNOSIS SYSTEM will be mailed to
you immediately.

Please remember, we are giving you this billion dollar Secret for
FREE and we ask NOTHING in return. However, we ask that
you have the Courtesy to cover small postage/shipping/handling
charge for mailing this package out to you. So please make sure
you enclose $ 3 check/money order/cash with your name and
address otherwise your request will NOT be fulfilled.

*** Enjoy the Good Life and have more fun than you ever imagined ***

Please mail your request to :

7510 SUNSET BL ;
SUITE # 334
LOS ANGELES, CA.90046

1103. Re: The 3 biggest reasons to drop the code !

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-15 00:00:00 UTC
From: kd1hz@anomaly.ideamation.com
Message-ID: <5bjut6$156@anomaly.ideamation.com>
Source record: 207091

In article <32DD135F.2E22@pacbell.net>,
Dan K Nelson <dknelson@pacbell.net> wrote:

>I've been reading the pro's and con's of the code requirement for some
>time now. Although I see many good points on both sides, it seems that
>most of the pro-coders think along the lines of the above quoted text.

If you reword your conclusion to be "...think no-coders that complain
about the code requirement..." then I would agree.

>I can relate the code vs. no code argument to the DOS vs. Windows
>argument.

Unfortunately the two are so completely dissimilar that any analogy
you draw between them would be so completely flawed that it really isn't
worth discussing.

>For years I have heard the die hard DOS users degrade those who would
>use any of the high level languages or operating systems as people who
>were "too dumb" to learn how to use DOS, or "too lazy" to write their
>own software.

Like I said, the two are completely unrelated. How is using DOS/Windows
akin to "writing your own software"? I don't see the parallel to this
and the code issue at all.

>However, it was the introduction of the high level operating systems
>which spawned the increase in sales of computers, and as a result, the
>manufacturers were motivated to develop better hardware and newer
>technology. This, in turn, has created many new computer users and
>software developers.

High level operating systems have managed to "dumb down" the computer
industry to the point that whenever I see an advertisement in the
local paper for a "MIS Manager", it is invariably some company looking
for someone to do their accounting on Peachtree. Whenever I place an
advertisement looking for "System Administrators" I get hundreds of
resumes from people who are 'computer experts' because "I've used a
computer at work for a year now".

Is this "progress"? I don't think so. All it has done is turn the
computer industry from a specialized field into a commodity field.

Now, I'm not saying the same is the case with the codefree license,
but you can understand the inadequacy of your analogy with this
example.

>The end result of the introduction of high level operating systems and
>simplified user interfaces is that the average computer user today is
>vastly more computer literate that they were just a few years ago.

I disagree. Most users I know (and I personally know thousands) are
completely computer ILliterate. Sure, they know how to use their computer.
You can also teach a mouse to press a button to get water too.

>If the computer industry had insisted that in order to use a computer
>the user had to know how to write their own software, or use only DOS
>for an operating system, then low cost high performance computers, the
>"computer revolution" or the "information super highway" would not
>exist today.

Not necessarily. For one thing, we might not have word processing
software that requires 200MB of disk space to load. We might not have
operating systems that ship on a 650MB CD-ROM because it is so bloated.
We might not have application programs developed in these "high level"
languages take 50-80MB worth of disk space for the most basic
application.

>I wonder if the pro-coders who have personal computers are consistant
>with their philosophy, run only DOS, and write all of their own software
>using only low level machine code?

Personally, I like machine code. It gives a much better logical
understanding of a program's operative flow. Certainly much better
than "drop a control here and.... Presto!". That's not really programming
at all.

There are good points on both sides, but a lot of trivial gago also.

``Seems'' may be very confusing and biased. I am a pro-coder, and a code user that can run with the big dogs, if I need to, including commercially. That does not make me look down the nose at anyone who tries. I do get a little concerned about folks that constantly say they ``cant'' when, in the past 25 years, I have YET to find someone that could not, if they wanted to..... bar none, and that includes disabled folks that would otherwise qualify for a doctor's waiver. In my association with it, the code has always been a ``can do'' proposition to those that were willing to do. It may not be easy for all, or uniformly as easy for all, as anyone else, but that has not stopped anyone I have ever met, nor elmered, nor taught in the art, in my experiences. That is maybe around 200 individuals, over the years, with about 10 relatively closely. That is a small sample, statistically, but I have learned a lot from them, and hopefully, they have learned a little from me, too.

Although the code is an ``ancient'' form (we might consider it an art form anymore, or maybe a craft or trade), and becoming officially disused after Feb 01, 1999, in the commercial sector, there are numerous places in the world, for example Thailand, Vietnam, the Phillippines, and related third world seagoing countries, that will continue to use it in the backwaters for a few more years, because it is cost effective, where people are cheaper than expensive equipment. But, that is not the general world communications sphere.

In the amateur services, my opinion would suggest that it will be, also, officially retired, within several years AFTER the Feb 01, 1999, date of official commercial disuse of it. After that time, it becomes a historical footnote. UNTIL that time, it is still a regulatory point that needs to

be met, by world parties, regardless of what bickerings the internetters have.

>I work as a computer engineer for one of the "big three" computer
>companies, and have worked in the computer field for over ten years. I
>can relate the code vs. no code argument to the DOS vs. Windows
>argument.

OK, that sounds good. I have been working with them in the laboratory, from handbuilt systems up to turnkey unix boxen to mainframes for about 20 years or so. I think I see where you are going, but will follow along for the ride.

>For years I have heard the die hard DOS users degrade those who would
>use any of the high level languages or operating systems as people who
>were "too dumb" to learn how to use DOS, or "too lazy" to write their
>own software.

I will also take issue with the above point of view. Die-hards in any endeavour need to be taken with a couple of grains of salt. But, I have had the fortune to be around and work with things from the predawn dos era (mainframes, fortran IV, punch cards, rje terminals, dumb terminal telecoms at 110 baud from paper tapes, through the CP/M era where we built boxes from boards or kits of parts for boards in the laboratory, bought turnkey systems where ease of startup was important, wired up ascii 300 port unix boxen for primitive networking, installed early ethernet networks, bought dos boxen where ease of use was wanted or clone boxen where we had to tailor up lab data acquisition systems, on into the current ``fancy doz'' era where screen impression is more important than knowing what is going on with the machine. Now, all that does not make me a master of the art, but I have been at it enough to learn a few things about it.

1). One uses the level of language appropriate for the task. If that is assember or C or Basic or Fortran or canned programs, that is fine, as long as it is appropriate for the task. If the task requires only a simple dox boxen, then there is no need for a pentium Doz box. (Particular cases here are slow-speed daq systems where even a CP/M box is plenty fast for all needs). One should not use Doz to data process 100,000 data points with a 20 line code snippet. A simple xt box works nicely, although a pentium box is quite fast if you can work around the Doz overhead.

2). Dos is easy to learn, but is threedimensonally abstract. It takes a level of abstract intelligence that not everyone has. Thus it is hard to visualize for some folks and relatively easy for others. This is very similar to the standard *nix environment and shells. BUT, even the hard-to-visualize folks can learn it if they spend a little time thereat. Once a little bit of HOW dos functions is learned, it is easy to fix and keep going, without blowing up. Unix is a little more complicated, but still relatively simple if taken at a dos level in the basic shells without X11. It can also

be VERY fast.

3). Doz is very easy to learn, at the surface, so it is easy to get a lot of folks somewhat literate on Doz, fairly easily. But, and unfortunately, Doz crashes easily. When it does, most of these newly literate folks, don't have a snoball's chance in hades of understanding what is going on. They are usually totally clueless. At least that has been my experience with them. Doz is also rather stuck in its own overhead that often gets in the way if you are trying to be creative and do something different. Dos and *nix are much more flexible.

>However, it was the introduction of the high level operating systems
>which spawned the increase in sales of computers, and as a result, the
>manufacturers were motivated to develop better hardware and newer
>technology. This, in turn, has created many new computer users and
>software developers.

Hardware is hardware is hardware without an understanding of how it runs and how to KEEP IT RUNNING. What we see is a lot of new flash and very little really new substantive programming these days. What is new is a lot harder to bring along and keep going. There is a lot of underthetable reuse of old code, in new and interesting ways. There is a lot of new GLITZ on the same old undercarriage.

>The end result of the introduction of high level operating systems and
>simplified user interfaces is that the average computer user today is
>vastly more computer literate that they were just a few years ago.

Sure, very true. But, he has no understanding at all of what is going on. If it crashes, and it often will, and if it won't install perfectly, the first time, the average computer user of today is totally clueless, and totally helpless, and interestingly, becoming more ignorant of even HOW to approach beginning to get it straight, other than calling a geek Doz jockey for help.

>If the computer industry had insisted that in order to use a computer
>the user had to know how to write their own software, or use only DOS
>for an operating system, then low cost high performance computers, the
>"computer revolution" or the "information super highway" would not
>exist today.

Wrongo. The information super highway was working just fine, albeit a bit more slowly, off my 110 baud ASR33 Teletype, back in 1980-81. One gets more GLITZ these days, and more information is available, but the mechanics are mostly the same. The theory is mostly the same. The hardware has changed immensely. The unix backbone upon which it is all based, as not really changed greatly in 20 years, if you stop to consider the pioneering work done by the ancients amongst us. Doz is trying to become more *nixy every day.

The industry has to sell things, so they are often very tied up with their folks doing thier prescribed pet task and NOTHING ELSE. Hence,

they are very specifically applications oriented, with no thought of
underlying knowledge. That is sad, and a problem when folks work in
my department and I ask even simple things of them on the computer,
that are only slightly off the normal GLITZ track.

Dos is a very simple operating system. If you want glitz, you pile
applications on the operating system. Basically, that is all Doz is.
The overhead is TREMENDOUS. That is WHY we need pentium processors,
these days, just to keep the applications overhead with enough horsepower
to play pretty. Straight dos, runs like a striped arsed ape on a pentium,
even while waiting for Doz to catch up.

Doz is exceedingly complex at anything more than a basic user level.
It is begetting to try to make itself emulate unix. It can do a lot
when it works, but only as IT tries to make you do it. It can be very
inflexible. Dos is much more reliable than Doz in that respect, and
much more flexible. But, you have to KNOW how to make it flexible.
Few modern computer users do, anymore. That is why companies train
their pet computer staff, to handhold and keep the masses going.
We do it here, because the masses are not capable of learning more
than the minimum to keep Doz going. It becomes more practical to
pay someone to do it for you as the complexity increases. One can
draw an analogy there to modern amateur radio operations in the complex
ricenboxen that you can't even fix anymore unless you send it back to
the company, and only IF they have spares for it. Many/most new hams
have become appliance operators, in this analogy, just like the Doz folks.
Unfortunately, they can't operate themselves out of a paper bag, and even
begin to understand what they are doing, unless the take a ``dos'' or
``unix'' style approach and DIVE INTO the system to understand what is
going on.

>I wonder if the pro-coders who have personal computers are consistant
>with their philosophy, run only DOS, and write all of their own software
>using only low level machine code?

I will take issue with this line of reasoning. It is mostly meaningless.
Those of use that could and would handle the low level code in 1980 can
still handle the low-level Morse code in 1997. I will write my own code
to do things that I need to have horsepower do. I will use the glitzenboxen
if I want to see playpretties on the internet. Creative workers will not
put up with the inflexibility of Doz when they have to be creative. The
herd will merely stay within the narrow confines of their chosen applications.
Why do you think there are so many folks chasing after the free unix clones?
Because these clones have more horsepower than Bill's Doz systems, usually.
Also, they are the real thing standard which Doz is beginning to emulate.
If I need a gui I will run Doz or X11, as needed. If I need computing
horsepower, I will not burdon the box with useless gui overhead, and
be quite content with sh, csh, ksh, dos, cp/m or jcl. If I need a simple
keyboard to run cw, a Kaypro II does it very well, or even a simple
xt box. It also does it much better than a pentium processor with a heavy
Doz overhead. To throw a gui on it is a real waste, and serious overhead

and compexity to keep tabs on. If I want highlevel internetting, I will use an X11 box with BSD or *nix or whatever, anytime over a Doz box. The systems work better. If I need a fancy gui playpretty, I will use Doz, unless there is a better X11 application out there for what I need to do. So, the point is I use what is appropriate for the task, available hardware, available software, and run with that. IF that means Morse code, over pactor or ssb then that is the way it will go. If I can't ever get through on cw, then maybe I will fire up pactor or hit the mike. That has yet to happen though, except in a rare case where the other end could not handle the ``low level'' communications.

It seems we have trained a bunch of glitz appliance operators that are hard pressed to understand the basice of the hardware/software/operation. They all seem to have forgotten the approach to HOW to get down the road, unless carried along on the appliance.

Interestingly, Dan, I see a parallel here to the ongoing code/no-code situation. Those that will and have the DRIVE to get there ``can do'', while those that don't, wont. That is the way it always has been, even back in the early computer days and also back in the early spark and CW days. Things really have not changed much..... even with pentium Doz boxen.

:>try an uninstall , Do I need to???
:>

Bob,

A problem such as you describe is most commonly due to a problem with
your DISPLAY DRIVER. I expect you did not replace the display driver
when you reinstalled Windows, merely used the existing driver ...

Try going into the Windows Setup, Options, Change Windows Settings and
select VGA. When prompted, select "replace driver" (or the equivalent)
to load a new VGA driver and then restart Windows. After that, go
through the process AGAIN to re-select your video card specific driver
(at whatever HIGHER resolution/color depth you prefer) ... AGAIN ...
you must *NOT* select "use existing driver" when asked but load (and
expand) a fresh copy of the display driver and appropriate fonts from
the original distribution disks.

The boxes/fonts/graphics in LogWindows are all greated by the Windows
GDI (Graphics Display Interface) and not generated. per se, by LogWin
itself.

Drew,

The XEx/your_US_callsign license is ONLY valid in Mexican territory and
Mexican territorial waters ...
It is NOT legal to use the XE call here in the US as a "reciprocal" ... you
have to stick with your
US license in US territory ... however, when in Mexico, it's very nice.

Garry:
I posted a reply here, but for some reason, it did not show up.

I am a State of Wisconsin Certified Master Electrician.
I work with sizing wire for the load it will carry, almost every day.
If I was making this installation in my car, I would use #8.
The National Electrical Code says #8 can carry 50 Amps, no problem.
If you are worried about voltage drop, use the #4.

Some battery cables, as original equipment on the car, are only #4.
Just be sure to make a good secure connection. Don't use alligator type clips.

It was correct as of when I left Mexico (not quite 2 years ago) and came
back to the states.

When my wife and I were in Mexico last Feb. I did not bother to take a
rig/get a permit, since
we were busy visiting her family and only there for 2 weeks.
